Mission Statement

The mission of State Fire Training is to enable the California fire service to safely protect life and property through education, training, and certification.

California Fire Service Training and Education System

The California Fire Service Training and Education System (CFSTES) was established to provide a single statewide focus for fire service training in California. CFSTES is a composite of all the elements that contribute to the development, delivery, and administration of training for the California Fire Service. The authority for the central coordination of this effort is vested in the Training Division of the California State Fire Marshal's Office with oversight provided by the State Board of Fire Services.

The role of CFSTES is one of facilitating, coordinating, and assisting in the development and implementation of standards and certification for the California fire service. CFSTES manages the California Fire Academy System by providing standardized curriculum and tests; accredited courses leading to certification; approved standardized training programs for local and regional delivery; administering the certification system; and publishing Career Development Guides, Instructors Guides, Student Manuals, Student Supplements, and other related support materials.

This system is as successful and effective as the people involved in it are. It is a fire service system developed by the fire service, for the fire service... and we believe it is the best one in the country.

Acknowledgments

The State Fire Training Curriculum Development Division coordinated the development of the material contained in this guide. Before its publication, the Statewide Training and Education Advisory Committee (STEAC) and the State Board of Fire Services (SBFS) approved this guide. This guide is appropriate for fire service personnel and for personnel in related occupations that are pursuing State Fire Training certification.

Ruben Grijalva Director of CAL FIRE	
Kate Dargan State Fire Marshal	Tonya Hoover Assistant State Fire Marshal
Mike Richwine Chief, State Fire Training	Ron Coleman Chair, STEAC

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

Special acknowledgement and thanks are extended to the following members of CDF/State Fire Training Curriculum Development Division for their diligent efforts and contributions that made the final publication of this document possible.

Alicia Hamilton Fire Service Training Specialist	Monica Miller Office Technician
--	---

The material contained in this document was compiled and organized through the cooperative effort of numerous professionals within, and associated with, the California fire service. We gratefully acknowledge the individuals who served as principal developers for this document.

Howard Cooke Sacramento Fire Department
Keith Marshall Burlingame Fire Department (Retired)
Robert Marshall Gilroy Fire Department
Rocque Yballa Central County Fire Department

"We gratefully acknowledge the hard work and accomplishments of those before us who built the solid foundation on which this program continues to grow."

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

Student Profile

Target Group

Fire prevention personnel

Prerequisites

Fire Prevention 1A (Bridge)

Desired Attendance Time Frame

Within one year of completing Fire Prevention 1A (Bridge)

Class Requirements and Space

The characteristics of the classroom and supportive facilities have a great impact on the learning environment and the instructor's success or failure. For this course, it is advisable for the instructor to adhere as closely as possible to the following guidelines.

Equipment

Writing board with markers/erasers
Appropriate audiovisual equipment
Appropriate audiovisual materials

Materials

- Unit 1
 - Progress chart
 - Activity 1-1-1: Fire Prevention Checkup
- Unit 2
 - Flammable liquid safety cans for demonstration
 - BLEVE video, NFPA (optional)
 - Activity 2-1-1: Introduction To Terms
 - Activity 2-1-2: Flammable And Combustible Liquid Classifications
 - Activity 2-2-1: Allowable Containers
 - Activity 2-3-1: MSDS Information Search
 - Activity 2-6-1: Write 'Em Up
 - Activity 2-8-1: Hazard Characteristics Of Gases
- Unit 3
 - Sample resource material
 - Activity 3-1-1: Hazardous Materials Terms And Characteristics
 - Activity 3-8-1: Developing NFPA 704 Placards
 - Activity 3-10-1: Hazardous Materials Permit And Exempt Amounts"
- Unit 4
 - Different types of portable fire extinguishers
 - Activity 4-2-1: Extinguisher Placement

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

- ❑ Unit 5
 - Activity 5-3-1: Inspecting Fixed Fire Protection Systems
- ❑ Unit 6
 - Activity 6-1-1: Terminology Crossword
- ❑ Unit 7
 - Activity 7-3-1: Unit 7 Homework
 - Activity 7-4-1: Fire Sprinkler Systems
 - Activity 7-5-1: Sprinkler System Components
 - Activity 7-9-1: Standpipe Required Systems
- ❑ Tests
 - Test 1
 - Test 2
 - Test 3
 - Certification Exam

RETIRED CURRICULUM

Introduction to the Instructor Guide

For the most part, the 2008 Edition of Fire Prevention 1B is not a complete rewrite of the 2003 Edition. In January of 2008, the International Fire Code with California amendments became effective. Although many aspects of this code and California's previous code are similar in its fire and life safety value, some aspects have changed. Where appropriate, the authors of this rewrite chose to update codes, sections, and terminology. Fire Prevention 1B is intended to be a basic fire and life safety course which provides the student an orientation of fire prevention and code enforcement.

Lesson Plans

This publication is intended to serve as an instructor guide. For each topic identified in the course outline, a lesson plan has been developed that contains: a time frame, level of instruction, authority, behavioral objective, materials needed, method of instruction, references, preparation statement, lesson content, and end page. Suggested application methods have been identified throughout the lessons for you to use during your presentation.

- **Time Frame:** The estimated duration required for in-class presentation.
- **Level of Instruction:** Identifies the instructional level that the material was designed to fulfill. You have the latitude to increase the level based on available time, local conditions, and the students' apperceptive base.
- **Authority:** Keyed, when applicable, to the appropriate Certification Training Standard task.
- **Behavioral Objective:** The behavioral objective is a statement of the student's performance desired at the end of instruction. You must ensure that enough information is given in the presentation and/or activities to enable the student to perform according to the goal.
- **Materials Needed:** This should be a complete list of everything you will need to present the lesson, including visual aids, tests, etc.
- **References:** These are the specific references the curriculum development team used when developing the lesson plan. In addition, references may be listed as additional study aids for instructors to enhance the lesson -- books, manuals, bulletins, scripts, visual aid utilization plans and the like.
- **Preparation:** The motivational statements in this section connect the student with the lesson plan topic through examples or illustrations relating to their occupation, injury, and even mortality. You may modify this section to better fit your students' environment.

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

- **Lesson Content:** Includes information used in the four-step method of instruction.

Technical Lesson Plans	
PRESENTATION	APPLICATION
Everything you say or display Content Notes	Student Participation <ul style="list-style-type: none"> • Questions • Activities • Audiovisual Cues

Manipulative Lesson Plan	
OPERATIONS	KEY POINTS
Specific actions to be performed by the students	The who, what, when, where, why, and how (the "tricks of the trade")
Begin with a verb, followed by a noun	Safety practices

Appendix A – Instructor Tests

- Course tests with answer keys.

Appendix B – Student Tests

- Test masters to copy for your students. Keep these in good condition to use for future classes. Collect these tests after they have been graded and discussed in class.
- **Do not let the students keep them since you will be using the same tests for your next class.**

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

Course Outline

Course Objectives: To prepare the student to...

- a) Identify the classification, properties, labeling, incidental storage, handling, and use of flammable and combustible liquids and gases.
- b) Identify the classification, properties, labeling, incidental storage, handling, and use of hazardous materials, other than flammable and combustible liquids and gases.
- c) Determine the principles and operational readiness of portable fire extinguishers.
- d) Determine the principles and operational readiness of special fixed fire suppression systems.
- e) Determine the principles and operational readiness of detection and alarm systems.
- f) Determine the principles and operational readiness of sprinkler systems and fire pumps.
- g) Determine the principles and operational readiness of standpipe systems.

Course Content:	40:00
Unit 1: Introduction To Fire Prevention 1B	
1-1 Orientation And Administration	2:30
Unit 2: Flammable And Combustible Liquids And Gases	
2-1 Flammable And Combustible Liquids Terms And Characteristics	1:00
2-2 Acceptable Containers For Flammable And Combustible Liquids	0:30
2-3 Introduction To Material Safety Data Sheets	0:30
2-4 Inside Storage Of Flammable And Combustible Liquids.....	1:00
2-5 Outside Storage Of Flammable And Combustible Liquids.....	1:00
2-6 Dispensing, Using, Mixing, And Handling Flammable And Combustible Liquids	1:30
2-7 Properties Of Compressed, Cryogenic, And Liquefied Gases	1:00
2-8 Fire Hazards Of Compressed And Liquefied Gases	1:00
2-9 Procedures For Inspecting Motor Vehicle Dispensing Stations	0:30
2-10 Procedures For Inspecting LPG Occupancies	0:30
2-11 Procedures For Inspecting Flammable Finish Application Occupancies	1:00
2-12 Methods For Controlling Ignition Sources And Explosive Atmospheres	1:00
Unit 3: Hazardous Materials And Explosives	
3-1 Hazardous Materials Terms And Characteristics.....	1:00
3-2 Sources Of Technical Information On Hazardous Materials	0:30
3-3 Regulating Hazardous Materials.....	0:30

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

Topic: 1-1: Orientation And Administration

Time Frame: 2:30

Level Of Instruction: Level I

Authority: State Fire Marshal

Behavioral Objective:

Condition: Given an activity and oral evaluation

Behavior: The student will confirm a knowledge of the course overview and student's responsibilities

Standard: To the instructor's satisfaction according to the information contained in Fire Prevention 1B (Bridge) Student Supplement, SFT, 2009 Edition, Pages iii-vii and 1-4

Materials Needed:

- Conference board/pads with markers/erasers
- Appropriate audiovisual training aids and devices
- Individual Activity 1-1-1: Fire Prevention Checkup

References:

- California Fire Code, CBSC, 2007 Edition
- State Fire Training Procedures Manual, SFT

Preparation:

Each instructor must develop a motivational statement on why the student should learn the upcoming material. The purpose is to establish relevancy of the lesson to the audience. The ACID BASE acronym can be used to help develop student motivation.

Attention (attract)

Begin

Curiosity (arouse)

Association

Interest (create)

Students

Desire (stimulate)

Experience

Cite examples or use related illustrations of near-miss incidents, injuries, or fatalities. Write this section "from the heart." Be creative! Have fun with it or be serious, but remember the goal is to stimulate student motivation.

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

Summary:

If these course requirements seem involved and the material that has to be covered appears like a lot in a short period, you are right. Careful attention is necessary. In addition, you should participate in the classroom exercises and group activities fully so you will obtain a greater understanding of the underlying principles being taught, and to be better prepared for the tests.

Evaluation:

The student will complete the activity at a time determined by the instructor.

Assignment:

Review your notes and study for our next session.

INDIVIDUAL ACTIVITY 1-1-1: FIRE PREVENTION CHECKUP

Time Frame: 2:00

Materials Needed:

- California Fire Code, CBSC, 2007 Edition
- Pen or pencil

Introduction: This activity provides the students the opportunity to assess their apperceptive base and retention of material presented in Fire Prevention 1A.

Directions:

1. Using the CFC, complete the following pretest.
2. You have 1 hour to complete this activity.
3. Be prepared to discuss your answers with the class.

SECTION I

Using information taken from CFC Section 202, identify the group assignments for the following occupancies:

Type Of Occupancy	Group Classification
1. Restaurant with occupant load of 299	A-2
2. Daycare center for 30 children, ages 5 and older	E
3. State prison	I-3
4. Restaurant with an occupant load of 32	B
5. Service station	S-1 or M
6. Condominium	R-2
7. Fiberglass shop where flammable liquids are used	H-2, H-3, or F-1
8. College classroom with 49 occupants	B
9. 15-story office building	B
10. 150,000 square foot retail store	M

SECTION II

Using information taken from Table 1015.1 for Column 1 and Table 1004.1.1 for Column 2, determine the minimum egress requirement and occupant load factor for the following occupancies:

	Minimum Of 2 Means Of Egress When Occupant Load Is At Least	Occupant Load Factor
11. Assembly area concentrated use (without fixed seats)	50	7
12. Classroom	50	20
13. Dance floor	50	7
14. Day care	11	35
15. Hotels and motels	11	200
16. Offices	50	100
17. Skating rink	50	50 skating - 15 deck
18. Stores/retail sales room	50	50
19. Kitchen/restaurant	50	200
20. Yoga room	50	50

SECTION III

Using the information taken from Part I, answer the following questions and include the code section where you found the answer.

21. Who is responsible for enforcement of the California Fire Code?

Fire Chief/Fire Code Official

Section 111.2.1.1, CFC Chapter 1/Section 104.1, CFC Appendix Chapter 1

22. Can the Fire Chief prevent a family from occupying their home after a fire has occurred there?

Yes

Section 104.11, CFC Appendix Chapter 1

23. When a jurisdiction adopts the fire code, do they automatically adopt the Appendix as well?

No

Section 101.2.1, CFC Appendix Chapter 1

FIRE PREVENTION 1B (BRIDGE)
Inspection Of Fire Protection Systems And Special Hazards

24. What sort of crime is a person guilty of when they violate provisions of the California Fire Code?

Misdemeanor

Section 111.2.1.3, CFC Chapter 1

25. Would a permit be required to ripen fruit or crops?

Yes

Section 105.5.18, CFC Appendix Chapter 1

Using the information taken from Part II, answer the following questions and include the code section where you found the answer.

26. Is a tent an air supported structure?

No

Section 2402.1

27. Is a duplex considered an apartment house?

No

Section 202

28. Can a "means of egress" include an area outside the building?

Yes

Section 1002.1

29. Does "liquid" mean flammable liquid, combustible liquid, or both?

Both

Section 2702.1

30. Is newsprint stacked on pallets considered high-pile storage if it is stacked 14 feet high?

Yes

Section 2302.1

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

Topic: 2-1: Flammable And Combustible Liquids Terms And Characteristics

Time Frame: 1:00

Level of Instruction: Level II

Authority: 1998 NFPA 1031: Sections 3-3.12, 4-3.9, and 5-3.8

Behavioral Objective:

Condition: Given an activity and formative test

Behavior: The student will confirm a knowledge of flammable and combustible liquids terms and characteristics

Standard: With a minimum 80% accuracy according to the information contained in the California Fire Code, CBSC, 2007 Edition, Chapters 2, 27, 34, and 43, Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Chapter 10, and Fire Prevention 1B Student Supplement, SFT, 2009 Edition, Pages 5-11

Materials Needed:

- Conference board/pads with markers/erasers
- Appropriate audiovisual training aids and devices
- Individual Activity 2-1-1: Introduction To Terms
- Individual Activity 2-1-2: Flammable And Combustible Liquid Classifications

References:

- California Fire Code, CBSC, 2007 Edition, Chapters 2, 27, 34, and 43
- Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Chapter 10

Preparation:

Each instructor must develop a motivational statement on why the student should learn the upcoming material. The purpose is to establish relevancy of the lesson to the audience. The ACID BASE acronym can be used to help develop student motivation.

Attention (attract)	Begin
Curiosity (arouse)	Association
Interest (create)	Students
Desire (stimulate)	Experience

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

Cite examples or use related illustrations of near-miss incidents, injuries, or fatalities. Write this section "from the heart." Be creative! Have fun with it or be serious, but remember the goal is to stimulate student motivation.

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

Summary:

An understanding of the terms and characteristics relating to flammable and combustible liquids will assist you in properly regulating these liquids and locating the proper code references for the safe handling and storage. This will also provide for a fire-safe community.

Evaluation:

The student will complete the activity and formative test at a time determined by the instructor.

Assignment:

Review your notes and read the California Fire Code, CBSC, 2007 Edition, Chapters 2, 27, 34, and 43, Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Chapter 10, and Fire Prevention 1B Student Supplement, SFT, 2009 Edition, Pages 5-11 in order to prepare yourself for the upcoming test. Study for our next session.

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

INDIVIDUAL ACTIVITY 2-1-1: INTRODUCTION TO TERMS

Time Frame:	0:30
Materials Needed:	<ul style="list-style-type: none">• <u>California Fire Code</u>, CBSC, 2007 Edition, Chapters 2, 27, 34, and 43• Pen or pencil
Introduction:	This lesson introduces numerous terms that will be used throughout the unit. This activity provides the students the opportunity to develop competency in using Article 2 to identify or define commodities or terminology necessary to correctly interpret code sections.
Directions:	<ol style="list-style-type: none">1. Using CFC Chapters 2, 27, 34, and 43, fill in the missing information for each of the following terms.2. You have 15 minutes to complete this activity.3. Be prepared to discuss your answers with the class.

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

SECTION I

1. Boiling point

- (a) The temperature when the vapor pressure produced by the liquid equals the **atmospheric** pressure.

2. Closed container

- (a) A container sealed by a **lid** or other device that will not allow the escape of liquid, vapor, or dust under ordinary conditions of use and handling.

3. Closed system use

- (a) The use of a liquid hazardous material in a closed system or vessel that will not emit **vapors** during normal operations.

4. Container

- (a) A vessel of **60** gallons or less capacity used for transporting or storing flammable and combustible liquids.

5. Dispensing

- (a) The **pouring** or transferring of a material from a container, tank, or similar vessel where vapors, dusts, fumes, mists, or gases could be liberated to the atmosphere.

6. Fire point

- (a) The **lowest** temperature of a liquid in an open container at which it will sustain burning for 5 seconds.
- (b) Not used in the classification of flammable or combustible liquids.

7. Flash point

- (a) The minimum temperature at which a liquid produces **vapors** in sufficient quantities to ignite (flash) when a test flame is applied.

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

8. Liquid

- (a) A material that has a melting point which is less than or equal to 68°F and a **boiling point** that is greater than 68°F at 14.7 psia.

9. Liquid storage room

- (a) A room classified as a Group H, Division 3 occupancy used for the storage of **flammable** or **combustible** liquids.
- (b) In excess of the amounts allowed in common areas.
- (c) Has a myriad of fire and life safety requirements as set forth in CFC Section 2702.1.

10. Mixing

- (a) The combining, blending, or bringing together within the same container, tank, or vessel flammable or combustible liquids whereby **flammable** vapors could escape to the atmosphere.

11. Open system use

- (a) The use of a liquid hazardous material in a system or vessel that is continuously open to the atmosphere during normal operations and will liberate **vapors**.

12. Portable tank

- (a) Any packaging over **60** gallon capacity and designed to be movable with mechanical means.

13. Safety can

- (a) An approved closed container, of not more than **5** gallons capacity, having a spring-closing lid and spout cover.

14. Storage

- (a) The keeping, retention, or leaving of flammable or combustible liquids in closed **containers**, tanks, or similar vessels.

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

15. Unstable (reactive) liquid

- (a) A chemical that will vigorously polymerize, decompose, condense, or will become self-reactive under conditions of shock, pressure, or **temperature**.
- (b) Also, when the product is exposed to the **atmosphere** during normal operations.

SECTION II: FLAMMABLE LIQUIDS

16. Defined as a liquid with a flash point below **100** °F.

17. As flash points are usually **less** than ambient air temperatures, Class I liquids will always produce enough vapors to ignite.

18. DOT classification requires Class I liquids to be labeled **"flammable."**

19. Class I-A liquids

- (a) Flash point below **73** °F.
- (b) Boiling point below **100** °F.

20. Class I-B liquids

- (a) Flash point below **73** °F.
- (b) Boiling point at or above **100** °F.

21. Class I-C liquids

- (a) Flash point at or above **73** °F and below **100** °F.
- (b) **Boiling** point is not considered in classifying Class I-C liquids.

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

SECTION III: COMBUSTIBLE LIQUIDS

22. Liquids with a flash point at or above 100 °F.
23. Class II
- (a) Flash point at or above 100 °F and below 140 °F.
 - (b) Require a moderate amount of heat to produce enough vapors to burn.
24. Class III-A liquids
- (a) Flash point at or above 140 °F and below 200 °F.
25. Class III-B liquids
- (a) Flash point at or above 200 °F.

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

INDIVIDUAL ACTIVITY 2-1-2: FLAMMABLE AND COMBUSTIBLE LIQUID CLASSIFICATIONS

Time Frame:	0:30
Materials Needed:	<ul style="list-style-type: none">• <u>California Fire Code</u>, CBSC, 2007 Edition, Chapter 34• Pen or pencil
Introduction:	This activity provides the students the opportunity to classify flammable and combustible liquids in accordance with the CFC.
Directions:	<ol style="list-style-type: none">1. Using CFC Chapter 34, classify the flammable and combustible liquids below.2. You have 15 minutes to complete this activity.3. Be prepared to discuss your answers with the class.

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

Class	Flammable And Combustible Liquid
I-B	1. Acetone, flash point: -4°F, boiling point: 133°F
I-B	2. Isopropyl alcohol, flash point: 53°F, boiling point: 181°F
II	3. Jet A fuel, flash point: 110-150°F, boiling point: 400°-550°F
I-A*/I-B	4. Jet B fuel, flash point: -10°-30°F, no information on boiling point
II	5. Blanket and roller wash, flash point: 100°F
I-B	6. Polyisocyanate activator, flash point: between 20°-73°F, boiling range: 168°-347°F
III-B	7. Epi-Cure 855, flash point: >200°F, boiling point: high boiling
III-B	8. Shell turbo oil, viscosity grade: 32, flash point: 385°F
I-B	9. Benzene, flash point: 12°F, boiling point: 176°F
II	10. Texaco charcoal lighter fluid, flash point: 105°F
II	11. Kerosene burner fuel, flash point: 100°F, boiling range: 175°-300°F
I-A*/I-B	12. Lacquer thinner, <20°F*
III-A	13. Dow brake fluid, flash point: 170°F
II	14. Diesel fuel oil No. 2-D, flash point: 125°F, boiling point: 340°-676°F
I-B	15. Gasoline, flash point: -45°F, boiling point: 100°-400°F

*In discussing these liquids, point out that while in the field, we are often confronted with insufficient information (i.e., no boiling point given). The conservative approach is to treat the liquid as a Class I-A until the business provides a material safety data sheet indicating a lesser hazard.

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

Summary:

By knowing what is an acceptable container for flammable and combustible liquids, you will be able to identify improper containers and those that are being misused. Additionally, you will be able to educate others as to the acceptable types permitted by code. This will help in minimizing the chance of fire.

Evaluation:

The student will complete the activity and formative test at a time determined by the instructor.

Assignment:

Review your notes and read Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Chapter 10 and Fire Prevention 1B Student Supplement, SFT, 2009 Edition, Pages 12-13 in order to prepare you for the upcoming test. Study for our next session.

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

INDIVIDUAL ACTIVITY 2-2-1: ALLOWABLE CONTAINERS

Time Frame: 0:20

Materials Needed:

- California Fire Code, CBSC, 2001 Edition, Chapters 2, 27 and 34
- NFPA 30: Flammable and Combustible Liquids Code, NFPA, 2003 Edition, Table 6.2.3 (included)
- Pen or pencil

Introduction: This activity provides the students the opportunity to read and interpret requirements regarding containers used for the incidental storage of flammable and combustible liquids.

Directions:

1. Using CFC Chapters 2, 27, and 34 and NFPA 30 Table 6.2.3, fill in the information in the chart below.
2. When the chart is completed, use that information and the CFC to answer questions 1-5.
3. You have 10 minutes to complete this activity.
4. Be prepared to discuss your answers with the class.

FLAMMABLE AND COMBUSTIBLE LIQUID WORKSHEET		Flash Point	Boiling Point	Safety Can	Approved Plastic	Polyethylene	Nonsafety Cans-Metal	Nonsafety Cans-Glass
		MIN-MAX TEMPS		MAXIMUM ALLOWABLE SIZES (LITERS)				
Flammable Liquids	Class I-A	<73°F	<100°F	10 Liter	5 Liter	5 Liter	5 Liter	.5 Liter
	Class I-B	<73°F	≥100°F	20 Liter	20 Liter	20 Liter	20 Liter	1 Liter
	Class I-C	73°-99°F		20 Liter	20 Liter	20 Liter	20 Liter	5 Liter

Bag-in Box Nonbulk	NP	NP	NP	NP	NP
Polyethylene UN1H1 or as authorized by DOT exemption	5 L (1.3 gal)	20 L (5.3 gal) [†]	20 L (5.3 gal) [†]	450 L (119 gal) [†]	450 L (119 gal) [†]
Fiber drum NMFC or UFC Type 2A; Types 3A, 3B-H, or 3B-L; or Type 4A	NP	NP	NP	450 L (119 gal)	450 L (119 gal)

NP = Not Permitted
[†] For Class 1B and 1C water-miscible liquids, the maximum allowable size of plastic container is 230 L (60 gal) if stored and protected in accordance with Table 6.8.2(g).

1. Regular unleaded gasoline (FP -40°F/BP 85°F) is being stored in 20 Liter plastic gas can. The gas can is approved and listed by UL. Is this a code violation?

Yes No

1-A max = 10 Liters

2. You find 20 Liters of MEK (Methyl Ethyl Ketone: FP -16°F/BP 186°F) stored in a metal container. Is this a code violation?

Yes No

1-B max = 20 Liters

3. While inspecting a lab, you find 20 Liters of Ethyl Ether (FP -49°F/BP 95°F) in a safety can. Is this a code violation?

Yes No

1-A max = 10 Liters

4. You find Isopropyl Alcohol (FP 54°F/BP 180°F) in a 1-liter glass jar. Is this a code violation?

Yes No

Maximum is 1 liter

5. Acetone (FP -4°F/BP 133°F) is being used in a nail shop. It is stored at every work station in a plastic 16 oz. non-listed, non-approved container. Is this a code violation?

Yes No

Prohibited by CFC 3404.3.1.1

Inspection Of Fire Protection Systems And Special Hazards

Topic: 2-3: Introduction To Material Safety Data Sheets

Time Frame: 0:30

Level of Instruction: Level II

Authority: 1998 NFPA 1031: Section 3-3.13

Behavioral Objective:

Condition: Given an activity and formative test

Behavior: The student will confirm a knowledge of material safety data sheets

Standard: With a minimum 80% accuracy according to the information contained in Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Chapter 10 and Fire Prevention 1B Student Supplement, SFT, 2009 Edition, Pages 14-16

Materials Needed:

- Conference board/pads with markers/erasers
- Appropriate audiovisual training aids and devices
- Individual Activity 2-3-1: MSDS Information Search

References:

- California Fire Code, CBSC, 2007 Edition, Chapter 27 and Appendix H
- Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Chapter 10

Preparation: Each instructor must develop a motivational statement on why the student should learn the upcoming material. The purpose is to establish relevancy of the lesson to the audience. The ACID BASE acronym can be used to help develop student motivation.

A ttention (attract)	B egin
C uriosity (arouse)	A ssociation
I nterest (create)	S tudents
D esire (stimulate)	E xperience

Cite examples or use related illustrations of near-miss incidents, injuries, or fatalities. Write this section "from the heart." Be creative! Have fun with it or be serious, but remember the goal is to stimulate student motivation.

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

Summary:

A MSDS should be available and readily accessible for the inspector's review. MSDS pages are essential for quick identification of materials and the methods used to control an unexpected release of dangerous products. MSDS pages are also needed for classifying flammable liquids and other hazardous materials.

Evaluation:

The student will complete the activity and formative test at a time determined by the instructor.

Assignment:

Review your notes and read Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Chapter 10 and Fire Prevention 1B Student Supplement, SFT, 2009 Edition, Pages 14-16 in order to prepare you for the upcoming test. Study for our next session.

RETIRED CURRICULUM

INDIVIDUAL ACTIVITY 2-3-1: MSDS INFORMATION SEARCH

Time Frame: 0:15

Materials Needed:

- MSDS for commercial propane
- Pen or pencil

Introduction: This activity provides the students the opportunity to find the relevant information listed on the MSDS that can assist the inspector when determining the regulation requirements for materials stored.

Directions:

1. Using the sample MSDS on the following pages, find the information requested below.
2. You have 10 minutes to complete this activity.
3. Be prepared to discuss your answers with the class.

<ol style="list-style-type: none"> 1. Chemical family 2. Boiling point 3. Flash point 4. Flammable limits 5. Company phone number 6. <u>NFPA 704</u> reactivity rating 7. <u>NFPA 704</u> health rating 8. Ignition temperature 9. Vapor density 10. FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

MATERIAL SAFETY DATA SHEET

EFFECTIVE JULY 1, 1993

AGENCY NAME	TRANSPORTATION	CHEMTREC NO.	GENERAL	SAFETY DEPT.
AGENCY ADDRESS	EMERGENCY NO:	(800) 424-9300	INFORMATION:	(201) 887-5300
AGENCY CITY/STATE				

DANGER! Extremely flammable liquefied gas under pressure. Keep away from heat, sparks, flame, and all other ignition sources. Vapor reduces oxygen available for breathing and may cause suffocation in confined spaces. Use only with adequate ventilation. Odor may not provide adequate warning of potentially hazardous concentrations. Vapor is heavier than air and may collect at low levels. Liquid may cause freeze burn similar to frostbite. Do not get liquid in eyes, on skin, or on clothing. Avoid prolonged breathing of vapor. Keep container valve closed when not in use.

SECTION I - IDENTIFICATION

PRODUCT: Commercial Propane
 SYNONYMS: Liquefied Petroleum Gas; LP-Gas; LPG
 CHEMICAL FAMILY: Paraffinic Hydrocarbon
 CHEMICAL FORMULA: C₃H₈

SECTION II - INGREDIENTS

MATERIAL	CAS NUMBER	PERCENT
ETHANE	74-84-0	0 -- 5.0
PROPANE	74-98-8	87.5 -- 100
PROPYLENE	115-07-1	0 -- 5.0
BUTANE	Various	0 -- 2.5
ETHYL MERCAPTAN	75-08-01	

SECTION III - HEALTH INFORMATION

INHALATION: Asphyxiant in high concentrations due to dilution of available oxygen. At excessive vapor concentrations, this product has anesthetic, asphyxiating properties and may cause sleepiness. At levels above 100,000 ppm (i.e. 10%), propane is mildly irritating to the respiratory tract and may result in dizziness, headache, drowsiness, nausea, shortness of breath, lack of muscular coordination, excessive salivation, disorientation, vomiting, and excitation. In extreme cases, convulsions, unconsciousness, and death may occur because of asphyxiation. Persons with chronic respiratory disease should avoid exposure.

INGESTION: Liquid may cause freeze burn similar to frostbite. Ingestion not expected to occur in normal use.

EYE CONTACT: Liquid may cause freeze burn similar to frostbite.

SKIN CONTACT: Liquid may cause freeze burn similar to frostbite.

OTHER: Product is not listed by IARC, NTP, or OSHA as a potential carcinogen. Propane and some of the minor components have been reported to be cardiac sensitizers in experiments

SECTION IV - OCCUPATIONAL EXPOSURE LIMITS

MATERIAL	PEL/TWA	TLV/TWA
ETHANE	Not Established	Simple Asphyxiant
PROPANE	1000 ppm	Simple Asphyxiant
PROPYLENE	Not Established	Simple Asphyxiant
BUTANE	800 ppm	800 ppm
ETHYL MERCAPTAN	0.5 ppm	0.5 ppm

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

SECTION V - EMERGENCY AND FIRST AID PROCEDURE For Over Exposure By

INHALATION: Remove victim from further exposure and into fresh air. Provide oxygen if breathing is difficult. If victim is unconscious, get prompt medical attention.

INGESTION: If swallowed, get immediate medical attention.

EYE CONTACT: For contact with liquid, flush immediately with water. Obtain immediate medical attention.

SKIN CONTACT: If freeze burn occurs, remove contaminated clothes, shoes and jewelry. Immerse burned area in warm (not hot) water. Keep immersed. Get prompt attention.

SECTION VI - PHYSICAL DATA

BOILING POINT: -44°F
MELTING POINT: N/A
VAPOR PRESSURE: 196 psig @ 100°F
SPECIFIC GRAVITY (H₂O = 1): 0.504
VAPOR DENSITY (AIR = 1): 1.50
SOLUBILITY IN WATER: Slight, 0.1 to 1.0%
APPEARANCE AND ODOR: Colorless, odorless in natural form

ODORANT WARNING

Odorant is added to aid in detection of leaks. One common odorant is ethyl mercaptan, CAS No. 75-08-1. Odorant has a foul, skunk like odor. The odorant is effective in most instances, but not everyone can smell the odor. The ability of people to detect odors varies widely. Also, certain chemical reactions with material in the propane system can reduce the propane odor level. No odorant will be 100% effective in all circumstances. If odor level appears to be weak, notify propane supplier immediately.

SECTION VII - FIRE AND EXPLOSION HAZARDS

FLASH POINT AND METHOD USED: -156°F
IGNITION TEMPERATURE IN AIR: 920°F – 1,120°F
FLAMMABLE LIMITS IN AIR, % BY VOLUME: Lower: 2.2% Upper: 9.6%
NFPA RATING (Under Fire Conditions. Does not apply to exposure hazards other than during fire):
HEALTH: 1 Slighting toxic
FIRE: 4 Extremely flammable
REACTIVITY: 0 Stable

FIRE FIGHTING PROCEDURES:

Eliminate sources of ignition. Evacuate area. Notify fire department. Allow only trained, properly protected personnel in area. Shut off source of gas, if possible. Allow fire to burn itself out after gas flow is shut off. If gas flow cannot be shut off, do not extinguish fire. Allow fire to burn itself out using high volume water supply to cool heat exposed pressure containers and nearby equipment. Approach a flame-enveloped container from the side, never the head ends. Use extreme caution when applying water to a container that has been exposed to heat or flame for more than a short time. For uncontrollable fires and when flame is impinging on container, withdraw all personnel and evacuate vicinity immediately.

USUAL FIRE & EXPLOSION HAZARDS:

Fire fighters should wear self-contained breathing apparatus in the positive pressure mode with a full facepiece when there is a possibility of exposure to smoke, fumes or hazardous decomposition

PRESENTATION	APPLICATION
<p>7. Explosion control¹⁶</p> <p>a) Shall be provided if</p> <ol style="list-style-type: none">1) Class I-A & I-B liquids are stored in excess of exempt amounts, or2) Explosive vapor-air mixtures could be present under normal operating conditions3) Exceptions<ul style="list-style-type: none">• Class I-C if provided with complying ventilation	

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

Summary:

Inside storage of flammable and combustible liquids is restricted due to the extreme dangers associated with storing such materials inside the confined area of a building. You must be able to apply the limits established within CFC Article 79 to occupancies in your jurisdiction. As almost all buildings within your jurisdiction contain some amount of flammable and combustible liquids, and it is important to know which occupancies may store these materials and in what quantities. Storage cabinets and other methods can be used to increase the amounts allowed, while providing for a reasonable degree of safety.

Evaluation:

The student will complete the formative test at a time determined by the instructor.

Assignment:

Review your notes and read the California Fire Code, CBSC, 2007 Edition, Chapters 9 and 34, and Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Chapter 10 in order to prepare you for the upcoming test. Study for our next session.

FIRE PREVENTION 1B (BRIDGE)

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

Topic: 2-5: Outside Storage Of Flammable And Combustible Liquids

Time Frame: 1:00

Level Of Instruction: Level II

Authority: 1998 NFPA 1031: Sections 3-3.12, 4-3.9, and 5-3.8

Behavioral Objective:

Condition: Given a formative test

Behavior: The student will confirm a knowledge of outside storage of flammable and combustible liquids

Standard: With a minimum 80% accuracy according to the information contained in the California Fire Code, CBSC, 2007 Edition, Chapter 34 and Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Chapter 10

Materials Needed:

- Conference board/pads with markers/erasers
- Appropriate audiovisual training aids and devices

References:

- California Fire Code, CBSC, 2007 Edition, Chapter 34
- Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Chapter 10

Preparation:

Each instructor must develop a motivational statement on why the student should learn the upcoming material. The purpose is to establish relevancy of the lesson to the audience. The ACID BASE acronym can be used to help develop student motivation.

Attention (attract)

Storage areas shall be protected against tampering by fencing or other approved methods4. Storage areas shall be protected from vehicular damage5. Clearance from combustibles<ol style="list-style-type: none">a) Areas shall be kept free of all combustible materials including weeds<ol style="list-style-type: none">1) For an area of at least 15 feet around the storage area6 Empty tanks and containers<ol style="list-style-type: none">a) Treated the same unless free from explosive vapors	<p>SLIDE: 2-5-10</p> <p>SLIDE: 2-5-11</p>

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

Summary:

Outside storage of flammable and combustible liquids poses not only a significant fire risk to the occupancy, but also to surrounding businesses. A working knowledge of safe storage practices will help to minimize the risk. Storage near property lines, adjacent to buildings and other situations must be evaluated using the requirements outlined in CFC Chapter 34. With this knowledge, you can effectively evaluate outside storage of flammable and combustible liquids.

Evaluation:

The student will complete the formative test at a time determined by the instructor.

Assignment:

Review your notes and read the California Fire Code, CBSC, 2007 Edition, Chapter 34 and Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Chapter 10 in order to prepare you for the upcoming test. Study for our next session.

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

Summary:

Proper use, dispensing, and handling of flammable and combustible liquids are a critical fire and life safety requirement. Through proper application of the CFC, the occurrence of fires involving dispensing, use, mixing, and handling of flammable and combustible liquids can be greatly reduced.

Evaluation:

The student will complete the activity and formative test at a time determined by the instructor.

Assignment:

Review your notes and read the California Fire Code, CBSC, 2007 Edition, Chapters 27 and 34, Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Chapter 10, and Fire Prevention 1B Student Supplement, SFT, 2009 Edition, Pages 19-29 in order to prepare yourself for the upcoming test. Study for our next session.

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

GROUP ACTIVITY 2-6-1: WRITE 'EM UP!

Time Frame:	0:30
Materials Needed:	<ul style="list-style-type: none">• <u>California Fire Code</u>, CBSC, 2007 Edition, Chapter 34• Paper• Pen or pencil
Introduction:	This activity provides the students in a common scenario the opportunity to apply CFC Chapter 34 to a factual situation.
Directions:	<ol style="list-style-type: none">1. Working in groups, read the scenario.2. Answer the questions for each hint and list them on a separate sheet of paper.3. Using the answers from the hints, determine at least three violations.4. Find the code section in CFC Article 79 that prohibits the activities and record them.5. List the corrective action(s) necessary for each violation.6. You have 20 minutes to complete this activity.7. Be prepared to discuss your findings with the class.

You go to ACME Automotive Paint Company to conduct a routine inspection. While conducting the inspection, you observe 1,000 gallons, in 5-gallon containers, of acrylic enamel reducer on display in the showroom of the store, along with 1,100 gallons of enamel paint in 1-gallon cans. In addition, stored on 8-foot wood shelves in the sales area, you find 1,500 gallons of lacquer retarder in 1- and 5-gallon metal cans. The exit door has cans of paint stored on both sides.

In a small outbuilding, you find a 55-gallon drum positioned on its side. It has a quarter-turn valve on a spigot and is used to fill 1- and 5-gallon cans with a gun cleaner for customers.

The building is Type III construction and a 25,000 square foot mercantile, with a sprinkler system with a discharge rate of 0.16 gpm/2,500 square feet. (Ordinary Hazard, Group 1)

FIRE PREVENTION 1B (BRIDGE)
 Inspection Of Fire Protection Systems And Special Hazards

HINT #1

What is the class of each material stored?

Acrylic enamel reducer:	<u>I-B</u>
Enamel paint:	<u>II</u>
Lacquer retarder:	<u>II</u>
Gun cleaner	<u>III-A</u>

Hint #2

What is the maximum quantity of each class allowed in a mercantile?

CFC Table 3404.3.4.1

Class I-B

Class II

Class III-A

Combined quantity of 1,600 gallons.

Footnote b: This building is not considered to be sprinklered due to design densities.

Column 2 does not apply because the sprinkler density is not high enough

Hint #3

Are the materials stored in accordance with the code?

CFC Section 3404.3.6.3

Storage height must not exceed 4 feet in unsprinklered buildings. (Table 3404.3.6.3(1))

Storage on shelves must not exceed 6 feet in height, and must be made of metal.

CFC Section 3404.3.3.3

Storage of any liquids, including stock for sale shall not be stored near a means of egress.

CFC Table 3404.3.6.3(2)

Excess storage height in sales area.

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

Hint #4

Is the dispensing of materials in accordance with the code?

CFC Section 3405.2.4

Class I-B, I-C, II, and III-A liquids filled by gravity must be fitted with a self- or automatic-closing valve and be provided with a secondary containment.

Answers

The following are possible violations the students may find. Many more possibilities must be considered. Chapter 27 may be considered as well.

- Maximum materials stored for display must not exceed 1600 gallons. (CFC Table 3404.3.4.1)
- Flammable and combustible liquids must not be stored in the means of egress. (CFC Section 3404.3.3.3)
- Flammable and combustible liquids must not be stored on shelves exceeding 6 feet. (CFC Section 3404.3.6.3)
- The tank used for dispensing the gun cleaner must be equipped with a self- or automatic-closing valve (CFC Section 3405.2.4)
- The filling area must be provided with spill control and secondary containment. (CFC Section 3405.2.4)

NIOSH (RTECS) Number: 9999999VO

OSHA PEL: NOT ESTABLISHED

ACGIH TLV: NOT ESTABLISHED

Other Recommended Limit: NONE RECOMMENDED

PHYSICAL/CHEMICAL CHARACTERISTICS

Appearance And Odor: BLACK PAINT

Boiling Point: 284F,140C

Vapor Density (Air=1): >AIR

Specific Gravity: 0.96-1.14

Evaporation Rate And Ref: SLOWER THAN ETHER

Percent Volatiles By Volume: >40

FIRE AND EXPLOSION HAZARD DATA

Flash Point: 101F,38C

Flash Point Method: PMCC

Lower Explosive Limit: 1.0%

Upper Explosive Limit: 6.0

Extinguishing Media: CO2, DRY CHEMICAL, FOAM

Special Fire Fighting Proc: FIRE FIGHTERS SHOULD WEAR PROTECTIVE CLOTHING AND SELF-CONTAINED BREATHING APPARATUS.

Unusual Fire And Expl Hazrds: KEEP CONTAINERS TIGHTLY CLOSED. ISOLATE FROM HEAT, ELECTRICAL EQUIPMENT, SPARKS, & OPEN FLAME. APPLICATION TO HOT SURFACES REQUIRES SPECIAL PRECAUTIONS.

REACTIVITY DATA

Stability: YES

Cond To Avoid (Stability): KEEP AWAY FROM HEAT, SPARKS, OPEN FLAME, ELECTRICAL EQUIPMENT, & HOT SURFACES.

Materials To Avoid: STRONG OXIDIZING AGENTS.

Hazardous Decomp Products: CARBON MONOXIDE AND DIOXIDE, AND METAL OXIDES

Hazardous Poly Occur: NO

Conditions To Avoid (Poly): NONE

HEALTH HAZARD DATA

Route Of Entry -Inhalation: YES

Route Of Entry -Skin: YES

Route Of Entry -Ingestion: YES

Health Haz Acute And Chronic: ACUTE-IRRITATION OF EYES, SKIN & RESPIRATORY SYSTEM. MAY CAUSE NERVOUS SYSTEM DEPRESSION. EXTREME EXPOSURE MAY RESULT IN UNCONSCIOUSNESS AND POSSIBLY IN DEATH. CHRONIC MAY CAUSE DAMAGE TO LIVER, KIDNEY, BLOOD FORMING AND REPRODUCTIVE SYSTEM.

Carcinogenicity - NTP: NO

Carcinogenicity - IARC: NO

Carcinogenicity - OSHA: NO

Explanation Carcinogenicity: RATS EXPOSED TO TITANIUM DIOXIDE DUST 250 MG/M3 DEVELOPED CANCER.

Signs/Symptoms Of Overexp: HEADACHE, DIZZINESS, NAUSEA/LOSS OF REDNESS/ITCHING/BURNING SENSATION. REPEATED/PROLONGED OVEREXPOSURE TO SOLVENTS CAUSES PERMANENT BRAIN/NERVOUS SYSTEM DAMAGE/ADVERSE AFFECTS TO THE LIVER, URINARY, & REPRODUCTIVE SYSTEMS.

Med Cond Aggravated By Exp: ALLERGIC SKIN REACTION

Emergency/First Aid Proc: INHALATION: REMOVE TO FRESH AIR, PROVIDE CPR/

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

PRODUCT DESCRIPTION:

Sherwin-Williams® Paint Gun Cleaner is a powerful, non-hazardous paint and coating remover that is completely biodegradable and worker friendly. The cleaner is safe for use on most: substrates including: steel, aluminum, chrome, alloys, composites and paint brushes. Cleans paint from spray equipment, and is an effective dip tank solution, this cleaner is also excellent for concrete, removing grease, tar and other stains from garage floors.

TECHNICAL DATA:

Weight Solids: 12% (dissolved solids)

Volume Solids: 4% (dissolved)

VOC 215g/l(1.793lbs/gal)

Shelf Life: 1 year

Mixing Ratio: Use at packaged consistency

Flash Point: >80°C (>176F)

Freeze Hazard: 0C (32F)

Boiling Point ~100°C (212F)

Viscosity (cPs) 5-154 (5-15 cPs)

APPLICATION:

Spray Gun Equipment

1. Fill paint reservoir with Gun Cleaner.
2. Immediately spray cleaner through equipment into an appropriate receptacle until gun is cleaned and empty.
3. Thoroughly rinse/purge equipment and lines with thinner/solvent to remove any cleaner residue.

Dip Tank Solution

1. Fully submerge all parts to be cleaned. Use an appropriate container such as a high density polyethylene (HDPE) container. The original 5 gallon pail or 1 gallon bucket works well.
2. Let parts soak. Check repeatedly, 2 hours maximum.
3. Once paint has softened, scrape off and wash thoroughly.

NOTES:

1. Use a sponge or soft brush to remove softened surface paint if needed.
2. Avoid lower temperatures. Optimum working temperature is 85-115°.
3. Gun Cleaner may be re-used/reconstituted many times.
4. To minimize evaporation close/reseal Gun Cleaner after use.

BOILING RANGE	222-395°F	MELTING POINT	N.A.
VOLATILE VOLUME	55-95%	SOLUBILITY IN WATER	N.A.

SECTION 4 - FIRE AND EXPLOSION HAZARD DATA

FLAMMABILITY CLASSIFICATION FLASH POINT See TABLE LEL 0.7 UEL 13.1

See TABLE

EXTINGUISHING MEDIA

Carbon Dioxide, Dry Chemical, Foam

UNUSUAL FIRE AND EXPLOSION HAZARDS

Keep containers tightly closed. Isolate from heat, electrical equipment, sparks, and open flame. Closed containers may explode when exposed to extreme heat. Application to hot surfaces requires special precautions. During emergency conditions, overexposure to decomposition products may cause a health hazard. Symptoms may not be immediately apparent.

SPECIAL FIRE FIGHTING PROCEDURES

Full protective equipment including self-contained breathing apparatus should be used. Water spray may be ineffective. If water is used, fog nozzles are preferable. Water may be used to cool closed containers to prevent pressure build-up and possible autoignition or explosion when exposed to extreme heat.

SECTION 5 - HEALTH HAZARD DATA

ROUTES OF EXPOSURE

Exposure may be by INHALATION and/or SKIN or EYE contact, depending on conditions of use. To minimize exposure, follow recommendations for proper use, ventilation, and personal protective equipment.

ACUTE HEALTH HAZARDS

EFFECTS OF OVEREXPOSURE

Irritation of eyes, skin, and respiratory system. May cause nervous system depression. Extreme overexposure may result in unconsciousness and possibly death.

Certain colors contain Lead (See TABLE and PRODUCT LABEL). Acute occupational exposure to Lead is uncommon, but results in effects and symptoms similar to chronic overexposure described below.

SIGNS AND SYMPTOMS OF OVEREXPOSURE

Headache, dizziness, nausea, and loss of coordination are indications of excessive exposure to vapors or spray mists.

Redness and itching or burning sensation may indicate eye or excessive skin exposure.

MEDICAL CONDITIONS AGGRAVATED BY EXPOSURE

None generally recognized.

EMERGENCY AND FIRST AID PROCEDURES

If INHALED: If affected, remove from exposure. Restore breathing. Keep warm and quiet.

If on SKIN: Wash affected area thoroughly with soap and water. Remove contaminated clothing and launder before re-use.

If in EYES: Flush eyes with large amounts of water for 15 minutes. Get medical attention.

If SWALLOWED: W880 & W890 => Never give anything by mouth to an unconscious person. DO NOT INDUCE VOMITING. Give conscious patient several glasses of water. Seek medical attention.

Other Products => Get medical attention.

CHRONIC HEALTH HAZARDS

Certain colors contain Lead and/or Chromates (See TABLE and PRODUCT LABEL).

Chronic overexposure to Lead may result in damage to the blood-forming nervous, urinary, and reproductive systems (including embryotoxic effects). Symptoms include abdominal discomfort or pain, constipation, loss of appetite, metallic taste, nausea, insomnia, nervous irritability, weakness, muscle and joint pains, headache, and dizziness.

Chromates are listed by IARC and NTP. Although studies have associated exposure to Chromium VI compounds with an increased risk of respiratory cancer, available evidence indicates that Lead Chromate (Chrome Yellow, Molybdate Orange) DOES NOT present this hazard.

Carbon Black is classified by IARC as possibly carcinogenic to humans (group 2B) based on experimental animal data, however, there is insufficient evidence in humans for its carcinogenicity.

Cobalt and cobalt compounds are classified by IARC as possibly carcinogenic to humans (group 2B) based on experimental animal data, however, there is inadequate evidence in humans for its carcinogenicity.

Prolonged overexposure to solvent ingredients in listed products, except W890, may cause adverse effects to the liver, urinary, blood forming, cardiovascular and reproductive systems. Prolonged overexposure to solvent ingredients in W890 may cause adverse effects to the liver and urinary systems.

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

Rats exposed to titanium dioxide dust at 250 mg./m³ developed lung cancer, however, such exposure levels are not attainable in the workplace.

Reports have associated repeated and prolonged overexposure to solvents with permanent brain and nervous system damage.

SECTION 6 - REACTIVITY DATA

STABILITY -- Stable

INCOMPATIBILITY

Metallics contain Aluminum. Contamination with Water, Acids, or Alkalis can cause evolution of hydrogen, which may result in dangerously increased pressures in closed containers.

CONDITIONS TO AVOID

None known.

HAZARDOUS DECOMPOSITION PRODUCTS

By fire, Carbon Dioxide, Carbon Monoxide, Oxides of Metals in Section 2.

HAZARDOUS POLYMERIZATION

Will Not Occur

SECTION 7 - SPILL OR LEAK PROCEDURES

STEPS TO BE TAKEN IN CASE MATERIAL IS RELEASED OR SPILLED

Remove all sources of ignition. Ventilate and remove with inert absorbent.

WASTE DISPOSAL METHOD

Waste from these products may be hazardous as defined under the Resource Conservation and Recovery Act (RCRA) 40 CFR 261. Waste must be tested for ignitability to determine the applicable EPA hazardous waste number. Waste from products containing Lead or Chromium must also be tested for extractability.

Incinerate in approved facility. Do not incinerate closed container. Dispose of in accordance with Federal, State, and Local regulations regarding pollution.

SECTION 8 - PROTECTION INFORMATION

PRECAUTIONS TO BE TAKEN IN USE

Certain colors contain Lead (See TABLE and PRODUCT LABEL). Before initial use of Lead-containing colors, consult OSHA's standard for occupational Exposure to Lead (29 CFR 1910.1025).

Use only with adequate ventilation. Avoid breathing vapor and spray mist. Avoid contact with skin and eyes. Wash hands after using.

These products may contain materials classified as nuisance particulates (listed "as Dust" in Section 2) that may be present at hazardous levels only during sanding or abrading of the dried film. If no specific dusts are listed in Section 2, the applicable limits for nuisance dusts are ACGIH TLV 10 mg./m³ (total dust), 3 mg./m³ (respirable fraction), OSHA PEL 15 mg./m³ (total dust), 5 mg./m³ (respirable fraction).

VENTILATION

Local exhaust preferable. General exhaust acceptable if the exposure to materials in Section 2 is maintained below applicable exposure limits. Refer to OSHA Standards 1910.94, 1910.107, 1910.108.

RESPIRATORY PROTECTION

If personal exposure cannot be controlled below applicable limits by ventilation, wear a properly fitted organic vapor/particulate respirator approved by NIOSH/MSHA for protection against materials in Section 2.

When sanding, wirebrushing, abrading, burning, or welding the dried film, wear a particulate respirator approved by NIOSH/MSHA for protection against non-volatile materials in Section 2.

PROTECTIVE GLOVES

Wear gloves that are recommended by glove supplier for protection against materials in Section 2.

EYE PROTECTION

Wear safety spectacles with unperforated sideshields.

SECTION 9 - PRECAUTIONS

DCL STORAGE CATEGORY -- See TABLE

PRECAUTIONS TO BE TAKEN IN HANDLING AND STORING

Keep away from heat, sparks, and open flame. During use and until all vapors are gone: Keep area ventilated - Do not smoke - Extinguish all flames, pilot lights, and heaters - Turn off stoves, electric tools and appliances, and any other sources of ignition.

Consult NFPA Code. Use approved Bonding and Grounding procedures.

Keep container closed when not in use. Transfer only to approved containers with complete and appropriate labeling. Do not take internally. Keep out of the reach of children.

OTHER PRECAUTIONS

Certain colors contain Lead and/or Cadmium (See TABLE and PRODUCT LABEL). Do not apply Lead-containing colors on toys and other children's articles, furniture, or any interior surface of a dwelling or facility which may be occupied or used by children. Do not

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

apply on any exterior surface of dwelling units, such as windowsills, porches, stairs, or railings to which children may be commonly exposed.

Intentional misuse by deliberately concentrating and inhaling the contents can be harmful or fatal.

SECTION 10 - OTHER REGULATORY INFORMATION

CALIFORNIA PROPOSITION 65

WARNING: These products, except W890, contain chemicals known to the State of California to cause cancer and birth defects or other reproductive harm.

TSCA CERTIFICATION

All chemicals in these products are listed, or are exempt from listing, on the TSCA Inventory.

The above information pertains to these products as currently formulated, and is based on the information available at this time. Addition of reducers or other additives to this product may substantially alter the composition and hazards of the product. Since conditions of use are outside our control, we make no warranties, express or implied, and assume no liability in connection with any use of this information.

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

Topic: 2-7: Properties Of Compressed, Cryogenic, And Liquefied Gases

Time Frame: 1:00

Level of Instruction: Level II

Authority: 1998 NFPA 1031: Section 3-3.13

Behavioral Objective:

Condition: Given a formative test

Behavior: The student will confirm a knowledge of properties of compressed, cryogenic, and liquefied gases

Standard: With a minimum 80% accuracy according to the information contained in Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Chapter 11

Materials Needed:

- Conference board/pads with markers/erasers
- Appropriate audiovisual training aids and devices

References:

- California Fire Code, CBSC, 2007 Edition, Chapters 30, 32, and 38
- Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Chapter 11

Preparation:

Each instructor must develop a motivational statement on why the student should learn the upcoming material. The purpose is to establish relevancy of the lesson to the audience. The ACID BASE acronym can be used to help develop student motivation.

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

Summary:

Gases may be flammable, or may have other hazardous properties. Regardless of the way they are stored, the inspector must be aware of the properties of gases so they may be regulated properly.

Evaluation:

The student will complete the formative test at a time determined by the instructor.

Assignment:

Review your notes and read Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Chapter 11 in order to prepare yourself for the upcoming test. Study for our next session.

Electrical arcs</p> <p>a) Electrical overload</p> <p>b) Normal operation of electric switches</p> <p>6. Static electricity</p> <p>a) Contact and separation of conductors</p> <p>7. Heat of compression</p> <p>a) Adiabatic heating (e.g., compressor pistons)</p> <p>1) Process of heating that does not gain or lose heat from an outside source</p> <ul style="list-style-type: none">Heat of compression most common type	<p>What is adiabatic heating?</p>

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

Summary:

Compressed and liquefied gases pose a significant regulatory challenge to inspectors. These products are found in storage and are encountered in dispensing, blending, and related activities. A working knowledge of the physical properties of gases, as well as a grasp of Fire Code regulations covering these products is essential for successful regulation of compressed and liquefied gases. Using the knowledge gained, you will know how to evaluate hazardous gases and the processes for which they are used.

Evaluation:

The student will complete the activity and formative test at a time determined by the instructor.

Assignment:

Review your notes and read Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Chapters 10 and 11, and Fire Prevention 1B Student Supplement, SFT, 2009 Edition, Pages 31-32 in order to prepare yourself for the upcoming test. Study for our next session.

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

INDIVIDUAL ACTIVITY 2-8-1: HAZARDOUS CHARACTERISTICS OF GASES

Time Frame:	0:20
Materials Needed:	<ul style="list-style-type: none">• <u>Fire Inspection and Code Enforcement</u>, IFSTA, Sixth Edition, Chapters 10 and 11• Pen or pencil
Introduction:	This activity provides the students the opportunity to increase their ability to understand and explain the basic physical characteristics of compressed and liquefied gases.
Directions:	<ol style="list-style-type: none">1. Fill in the blanks below to describe the characteristics of compressed and liquefied gases.2. You have 15 minutes to complete this activity.3. Be prepared to discuss your answers with the class.

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

1. What gas is propane compared to when determining the vapor density of propane?

Equal volume of air

Fire Inspection and Code Enforcement, IFSTA, Sixth Edition Page 349

2. Write "less than one, one, or greater than one" next to each gas below to indicate the relative density of the gases.

Ethyl ether: **Greater than one (>1)** Acetone: **Greater than one (>1)**

Methane: **Less than one (<1)** Propane: **Greater than one (>1)**

Fire Inspection and Code Enforcement, IFSTA, Sixth Edition Page 349

3. Name four heat sources that can cause a flammable gas to ignite.

(1) Electrical arcs

(2) Hot surfaces

(3) Open flames

(4) Cutting, welding, grinding operations

Additional answer(s): Using impact tools and static electricity

Fire Inspection and Code Enforcement, IFSTA, Sixth Edition Page 353

4. What does the acronym BLEVE stand for?

Boiling Liquid Expanding Vapor Explosion

Fire Inspection and Code Enforcement, IFSTA, Sixth Edition Page 324

5. Name three causes of container failure.

(1) Excessive pressure inside a container causes the container to rupture and explode

(2) Inadequate venting to allow vapors to escape and burn at the vents

(3). Steel in the vapor space is softened by heat and fails

Fire Inspection and Code Enforcement, IFSTA, Sixth Edition Page 328

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

Topic: 2-9: Procedures For Inspecting Motor Vehicle Dispensing Stations

Time Frame: 0:30

Level of Instruction: Level II

Authority: 1998 NFPA 1031: Sections 3-3.12, 4-3.4, and 5-3.8

Behavioral Objective:

Condition: Given a formative test

Behavior: The student will confirm a knowledge of identifying the fire hazards and code violations of a motor vehicle dispensing station

Standard: With a minimum 80% accuracy according to the information contained in the California Fire Code, CBSC, 2007 Edition, Chapter 22

Materials Needed:

- Conference board/pads with markers/erasers
- Appropriate audiovisual training aids and devices

References:

- California Fire Code, CBSC, 2007 Edition, Chapter 22
- NFPA 30A: Code for Motor Fuel Dispensing Facilities and Repair Garages, NFPA, 2000 Edition

Preparation:

Each instructor must develop a motivational statement on why the student should learn the upcoming material. The purpose is to establish relevancy of the lesson to the audience. The ACID BASE acronym can be used to help develop student motivation.

A ttention (attract)	B egin
C uriosity (arouse)	A ssociation
I nterest (create)	S tudents
D esire (stimulate)	E xperience

Cite examples or use related illustrations of near-miss incidents, injuries, or fatalities. Write this section "from the heart." Be creative! Have fun with it or be serious, but remember the goal is to stimulate student motivation.

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

Summary:

With the basic understanding of code requirements for various types of motor vehicle dispensing stations, the inspection and enforcement of the code will provide for a safe working environment for employees and the public. Motor vehicle dispensing stations are in all jurisdictions. Due to the prevalence of these hazardous occupancies, you may become complacent about the hazards associated with them. Using the CFC as a guide, you can ensure community safety.

Evaluation:

The student will complete the formative test at a time determined by the instructor.

Assignment:

Review your notes and read the California Fire Code, CBSC, 2007 Edition, Chapter 22 in order to prepare yourself for the upcoming test. Study for our next session.

RETIRED CURRICULUM

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

Summary:

Having a working knowledge of the proper locations and usage of LPG will assist you in the enforcement and education for those who use and store LPG. This will then help in reducing potential hazards or accidents. LPG emergencies are relatively common occurrences, illustrating the need for constant vigilance in the application of code requirements.

Evaluation:

The student will complete the formative test at a time determined by the instructor.

Assignment:

Review your notes and read the California Fire Code, CBSC, 2007 Edition, Chapter 38 in order to prepare yourself for the upcoming test. Study for our next session.

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

Summary:

Finishing operations are common processes an inspector will assess. Inspectors should make sure that all potential hazards are removed, and that the area is clean and free of combustibles. The inspector should also ensure that the process has appropriate permits, and that the equipment is in proper condition. All this will help to make the workplace safe for workers and fire fighters should they respond to a call.

Evaluation:

The student will complete the formative test at a time determined by the instructor.

Assignment:

Review your notes and read the California Fire Code, CBSC, 2007 Edition, Chapter 15 in order to prepare yourself for the upcoming test. Study for our next session.

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

Topic: 2-12: Methods For Controlling Ignition Sources And Explosive Atmospheres

Time Frame: 1:00

Level Of Instruction: Level II

Authority: 1998 NFPA 1031: Section 3-3.8

Behavioral Objective:

Condition: Given a formative test

Behavior: The student will confirm a knowledge of the methods for controlling ignition sources and explosive atmospheres

Standard: With a minimum 80% accuracy according to the information contained in Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Chapters 3 and 10

Materials Needed:

- Conference board/pads with markers/erasers
- Appropriate audiovisual training aids and devices

References:

- California Fire Code, CBSC, 2007 Edition, Chapters 3 and 6
- Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Chapters 3 and 10

Preparation:

Each instructor must develop a motivational statement on why the student should learn the upcoming material. The purpose is to establish relevancy of the lesson to the audience. The ACID BASE acronym can be used to help develop student motivation.

PRESENTATION	APPLICATION
<p>B. Flammable and combustible liquids</p> <ol style="list-style-type: none">1. Formation of vapor poses a greater hazard than ordinary combustibles2. Liquids come to full intensity of burning within a few seconds of ignition (unlike wood)3. Vapors can migrate, unseen, reaching ignition sources and flashing back to fuel source <p>NOTE: Cite example of a typical flammable and combustible liquid spill incident and related fire. Examples are everything from a simple gas can in a garage to tank cars and fueling operations.</p> <p>V. PREVENTING EXPLOSIONS AND FIRES</p> <p>A. Principles used to prevent explosions and fires</p> <ol style="list-style-type: none">1. Excluding ignition sources2. Excluding air (oxygen)3. Keeping liquids in closed containers or piping4. Providing adequate ventilation of spaces where vapor may collect5. Using inert atmospheres over flammable liquids	<p>SLIDE: 2-12-4</p>

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

Summary:

Fires will not occur in flammable or combustible liquids if no heat source capable of causing ignition is present. Likewise, a flammable or combustible liquid will not ignite if ventilation is sufficient to keep the vapor concentration below its lower explosive limit.

Evaluation:

The student will complete the formative test at a time determined by the instructor.

Assignment:

Review your notes and read Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Chapters 3 and 10 in order to prepare yourself for the upcoming test. Study for our next session.

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

Summary:

The importance of understanding the terms and characteristics of hazardous materials provides the foundation for proper inspection and regulation of facilities using these materials. Additionally, this knowledge helps you when researching the code and to assist in utilizing the proper sections that are used to ensure compliance. Many of these materials seem alike, but may have extremely different characteristics. This type of information is essential for every inspector to know and understand.

Evaluation:

The student will complete the activity and formative test at a time determined by the instructor.

Assignment:

Review your notes and the California Fire Code, CBSC, 2007 Edition, Chapters 2, 13, 27, 29, 31, 37, 39, 40, 41, 43, and Appendix E, Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Chapters 10 and 11, and Fire Prevention 1B Student Supplement, SFT, 2009 Edition, Pages 37-38 in order to prepare yourself for the upcoming test. Study for our next session.

GROUP ACTIVITY 3-1-1: HAZARDOUS MATERIALS TERMS AND CHARACTERISTICS

Time Frame:	0:30
Materials Needed:	<ul style="list-style-type: none">• <u>California Fire Code</u>, CBSC, 2007 Edition• Pen or pencil
Introduction:	This activity provides the students the opportunity to understand the definitions, terms, and characteristics of hazardous materials.
Directions:	<ol style="list-style-type: none">1. Working in pairs and using the CFC, answer the following questions.2. You have 15 minutes to complete this activity.3. Be prepared to discuss your answers with the class.

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

1. Which class of oxidizer has a "primary hazard of slightly increasing the burning rate but does not cause spontaneous ignition"?

Class I

California Fire Code, CBSC, 2007 Edition, Section 4002, Page 447

2. Which section of the CFC provides the definition for a highly toxic material?

Section 3702

California Fire Code, CBSC, 2007 Edition, Page 423

3. Which class of unstable (reactive) materials is found to be normally stable, but loses stability at elevated temperatures and pressure?

Class I

California Fire Code, CBSC, 2007 Edition, Section 4302, Page 463

4. Which section of the CFC provides the definition for an outdoor control area?

Section 2702.1

California Fire Code, CBSC, 2001 Edition, Page 313

5. Which class of organic peroxide poses the least hazard?

Class V

California Fire Code, CBSC, 2007 Edition, Section 3902, Page 441

6. Which section of the CFC provides the definition for a corrosive?

Section 3102.1

California Fire Code, CBSC, 2007 Edition, Page 357

7. Which physical state is not included in the classes of oxidizers?

Gases

California Fire Code, CBSC, 2007 Edition, Section 4004, Page 448

8. Which section of the CFC provides a general definition for hazardous materials?

Section 2702

California Fire Code, CBSC, 2007 Edition, Page 312

Inspection Of Fire Protection Systems And Special Hazards

Summary:

Using all available resources, the inspector can identify the type of hazardous material in use or stored and the specific information needed to regulate each.

Evaluation:

The student will complete the formative test at a time determined by the instructor.

Assignment:

Review your notes and read Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Chapters 10 and 11 in order to prepare yourself for the upcoming test. Study for our next session.

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

Topic: 3-3: Regulating Hazardous Materials

Time Frame: 0:30

Level Of Instruction: Level II

Authority: 1998 NFPA 1031: Section 3-3.13

Behavioral Objective:

Condition: Given a formative test

Behavior: The student will confirm a knowledge of regulating hazardous materials

Standard: With a minimum 80% accuracy according to the information contained in the California Fire Code, CBSC, 2007 Edition, Chapter 27 and Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Chapters 10 and 11

Materials Needed:

- Conference board/pads with markers/erasers
- Appropriate audiovisual training aids and devices

References:

- California Fire Code, CBSC, 2007 Edition, Chapter 27
- Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Chapters 10 and 11
- Hazardous Materials Regulations, Response, and Site Operations, Delmar, 1999 Edition, Chapter 1
- North America Emergency Response Guidebook, DOT, 1999 Edition

Preparation:

Each instructor must develop a motivational statement on why the student should learn the upcoming material. The purpose is to establish relevancy of the lesson to the audience. The ACID BASE acronym can be used to help develop student motivation.

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

Summary:

Understanding the various laws, regulations, and placarding requirements will ensure you have the authority to enforce and apply these various requirements. This will also ensure the correct information is being provided to minimize hazards and inform responding units. Both DOT placards and NFPA 704 markings provide quick references for responding emergency personnel and can provide information needed for preservation of life and health.

Evaluation:

The student will complete the formative test at a time determined by the instructor.

Assignment:

Review your notes and read the California Fire Code, CBSF, 2007 Edition, Chapter 27 and Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Chapters 10 and 11 in order to prepare yourself for the upcoming test. Study for our next session.

PRESENTATION	APPLICATION
<ul style="list-style-type: none">B. Proper employee training helps ensure that leaks will not occurC. Appropriate, well-maintained equipment is vital to spill and leak protection<ul style="list-style-type: none">1. Excess flow valves2. Approved hoses and fittingsD. Proper ventilation must be provided during product transferE. Leak kits are available for various commodities<ul style="list-style-type: none">1. Chlorine2. Ammonia3. Check with local hazardous materials team	<p>Does your department have leak kits available?</p>

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

Summary:

Inspectors, as well as employees working with compressed and liquefied gases, must be well informed to reduce the incidence of accidents with these commodities. It is important to be familiar with the code sections and methods required to ensure the safe storage and transfer practices of compressed and liquefied gases. Transfer processes are dangerous because flammable gases are released into the surrounding environment. Hazardous conditions are limited by proper ventilation, control of ignition sources, and proper equipment. An inspector must ensure that these safety measures are in place and used.

Evaluation:

The student will complete the formative test at a time determined by the instructor.

Assignment:

Review your notes and read Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Chapter 11 in order to prepare you for the upcoming test. Study for our next session.

<p>D. Shelf storage</p> <ol style="list-style-type: none">1. Shelves must be of adequate construction for stored materials and must be braced and anchored in accordance with the CBC2. Shelves shall be provided with a lip or guard when used for storage of individual containers	<p>SLIDE 3-7-4</p>

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

Summary:

Inspectors are confronted with the issue of proper hazardous material storage methods. Knowing where to find and then how to implement these requirements is important in order to reduce the hazards to life and property. Hazardous materials are stored in all occupancies within your jurisdiction. Both a grocery store and the local doctor's office store hazardous materials. All occupancies must be inspected to ensure that storage conditions do not endanger the occupants and your community.

Evaluation:

The student will complete the formative test at a time determined by the instructor.

Assignment:

Review your notes and read the California Fire Code, CBSC, 2007 Edition, Chapter 27 and Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Chapters 10 and 11 in order to prepare yourself for the upcoming test. Study for our next session.

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

ENDNOTES

The endnotes provide support and facilitate instruction. It is recommended you insert the specific code section in the lesson plan where it is used. Please report immediately to State Fire Training Curriculum Development Division of any errors or changes you find to the endnotes.

¹ California Fire Code, CBSC, 2007 Edition, Section 2703.8.7

² California Fire Code, CBSC, 2007 Edition, Section 2703.9.8

FIRE PREVENTION 1B

Inspection Of Fire Protection Systems And Special Hazards

Topic: 3-8: NFPA 704 Identification Systems

Time Frame: 0:45

Level Of Instruction: Level II

Authority: 1998 NFPA 1031: Section 3-3.13

Behavioral Objective:

Condition: Given an activity and formative test

Behavior: The student will confirm a knowledge of NFPA 704 identification systems

Standard: With a minimum 80% accuracy according to the information contained in the California Fire Code, CBSC, 2007 Edition, Chapter 27 and Appendix F, Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Chapter 10, and Activity Sheet 3-8-1, and Fire Prevention 1B Student Supplement, SFT, 2009 Edition, Pages 45-55

Materials Needed:

- Conference board/pads with markers/erasers
- Appropriate audiovisual training aids and devices
- Activity Sheet 3-8-1:Developing NFPA 704 placards

References:

- California Fire Code, CBSC, 2007 Edition, Chapter 27 and Appendix F
- Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Chapter 10
- NFPA 704: Standard System for the Identification of the Hazards of Materials for Emergency Response, NFPA, 2001 Edition

Preparation:

Each instructor must develop a motivational statement on why the student should learn the upcoming material. The purpose is to establish relevancy of the lesson to the audience. The ACID BASE acronym can be used to help develop student motivation.

RETIRED CURRICULUM

FIRE PREVENTION 1B

Inspection Of Fire Protection Systems And Special Hazards

PRESENTATION	APPLICATION
<p>I. <u>NFPA 704</u> APPLICATION</p> <p>A. Rating system for identification of hazards within <u>fixed</u> facilities</p> <ol style="list-style-type: none">1. Uses a rating system or a diamond shaped sign with four quadrants<ol style="list-style-type: none">a) Red (top) quadrant is for flammabilityb) Yellow (right) quadrant is for reactivityc) White (bottom) quadrant is for special hazards<ol style="list-style-type: none">1) Example<ul style="list-style-type: none">• Water reactived) Blue (left) quadrant is for health hazard2. Numeric values 0-4 are used to classify the level of hazard<ol style="list-style-type: none">a) 0 - no hazardb) 1 - low hazardc) 2 - moderate hazardd) 3 - severe hazarde) 4 - extreme hazard <p>B. <u>NFPA 704</u> markers</p> <ol style="list-style-type: none">1. Should be affixed to any building, tank, or other fixed facility that stores hazardous materials<ol style="list-style-type: none">a) Should be on the side of the building that is nearest to the direction of responseb) May have a sign on multiple sides	<p>How does <u>NFPA 704</u> differ from placards and labels?</p> <p>SLIDE: 3-8-1</p> <p>SLIDE: 3-8-2</p> <p>Where should the marker be placed?</p> <p>SLIDE: 3-8-3</p>

FIRE PREVENTION 1B

Inspection Of Fire Protection Systems And Special Hazards

Summary:

NFPA 704 markings are widely used and provide a readily useable warning of potential hazards. Each inspector should appreciate the need for NFPA 704 markings on all fixed facilities

Evaluation:

The student will complete the activity and formative test at a time determined by the instructor.

Assignment:

Review your notes and read the California Fire Code, CBSC, 2007 Edition, Chapter 27 and Appendix F, Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Chapter 10, and Fire Prevention 1B Student Supplement, SFT, 2009 Edition, Pages 45-55 in order to prepare yourself for the upcoming test. Study for our next session.

FIRE PREVENTION 1B

Inspection Of Fire Protection Systems And Special Hazards

INDIVIDUAL ACTIVITY 3-8-1: DEVELOPING NFPA 704 PLACARDS

Time Frame:	0:30
Materials Needed:	<ul style="list-style-type: none">• <u>California Fire Code</u>, CBSC, 2007 Edition, Chapters 27 and Appendix F• <u>Fire Inspection and Code Enforcement</u>, IFSTA, Sixth Edition, Chapter 10• Material Safety Data Sheets for Benzoyl Peroxide, Sodium Hydroxide, Arsine, Calcium Carbide, and Ammonia (included)• Pen or pencil
Introduction:	This activity provides the students the opportunity to determine the appropriate designations for an NFPA 704 placard.
Directions:	<ol style="list-style-type: none">1. Review CFC Appendix F.2. Using the information given to you in each question, fill in the appropriate ratings for the NFPA placards.3. You have 20 minutes to complete this activity.4. Be prepared to discuss your answers with the class.

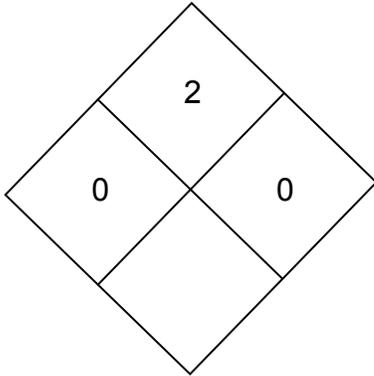

FIRE PREVENTION 1B

Inspection Of Fire Protection Systems And Special Hazards

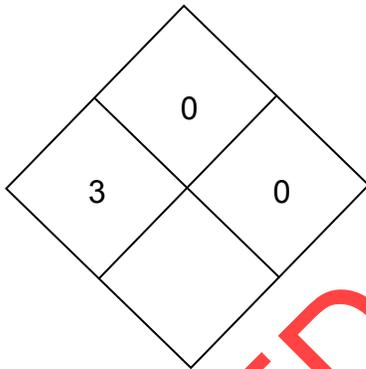

1. A building containing a flammable solid.

CFC Appendix F, Table F101.2

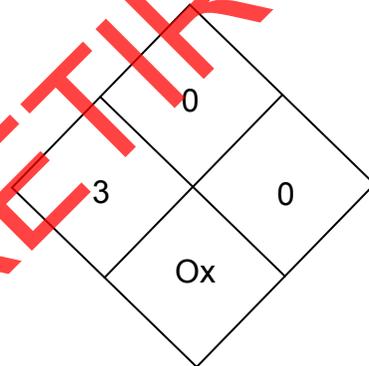

2. A structure with a toxic substance.

CFC Appendix F, Table F101.2

3. A hospital outbuilding containing liquid oxygen.

CFC Appendix F, Table F101.2

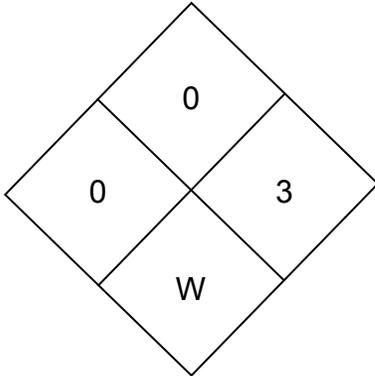

Liquid Oxygen is a cryogenic oxidizing in Table F101.2

FIRE PREVENTION 1B

Inspection Of Fire Protection Systems And Special Hazards

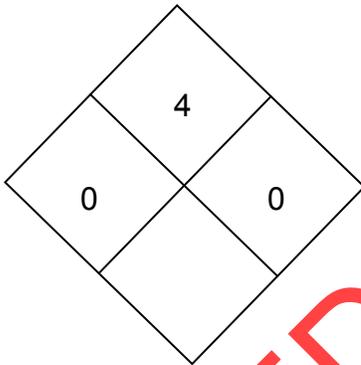

4. A shed containing a water reactive 3 material.

CFC Appendix F, Table F101.2

5. A warehouse containing a Class IIIA and a Class IA liquid.

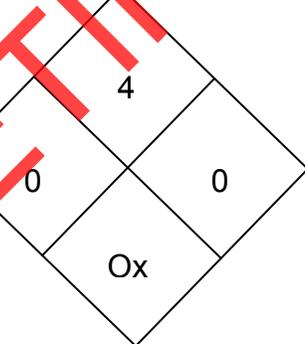

CFC Appendix F, Table F101.2

Class IIIA is F3
Class IA is F4
F4 is highest hazard, so it goes into the diamond

6. A repair garage containing Class II liquids, Class IC liquids, and an oxy-acetylene welding torch.

CFC Appendix F, Table F101.2

Class II is F2, Class IC is F3
Acetylene, a flammable gas, is F4
Oxygen, an oxidizing gas, is Ox

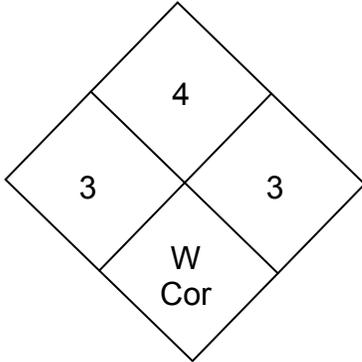

FIRE PREVENTION 1B

Inspection Of Fire Protection Systems And Special Hazards

7. A chemical warehouse containing an organic peroxide II, a corrosive, a flammable cryogenic, and a water reactive 3.

CFC Appendix F, Table F101.2

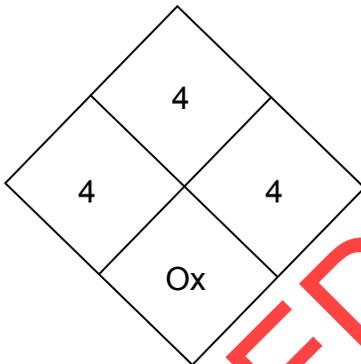

Organic Peroxide II is F3, R3
 Corrosive is H3, Cor
 Cryogenic Flammable is F4, H3
 Water Reactive 3 is W, R3
 Highest of each is H3, F4, R3, W, Cor

For questions 8 and 9, use the attached MSDS for Benzoyl Peroxide (Wet).

8. Building A contains wet benzoyl peroxide, sodium hydroxide, and arsine.

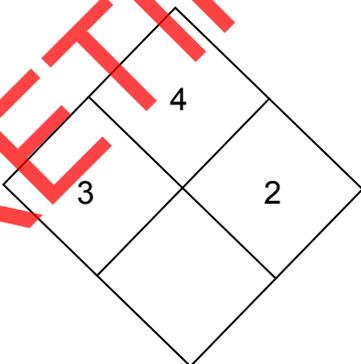

MSDS

Wet Benzoyl Peroxide is H2, F4, R4 (instability) Ox
 Hydrogen Peroxide is H3, F0, R1
 Arsine is H4, F4, R0

9. Building B contains calcium carbide and ammonia.

MSDS

Calcium Carbide is H1, F4, R2
 Ammonia is H3, F1, R0

FIRE PREVENTION 1B

Inspection Of Fire Protection Systems And Special Hazards

Material Safety Data Sheet

Benzoyl Peroxide (Wet)

ACC# 02782

Section 1 - Chemical Product and Company Identification

MSDS Name: Benzoyl Peroxide (Wet)
Catalog Numbers: AC211780000, AC211780010, AC211780050, AC211780100, AC211781000, 8274-1LB, NC9747998
Synonyms: Dibenzoyl peroxide; benzoic acid peroxide; benzoyl superoxide
Company Identification: Fisher Scientific, 1 Reagent Lane, Fair Lawn, NJ 07410
For information, call: 201-796-7100
Emergency Number: 201-796-7100
CHEMTREC assistance, call: 800-424-9300
International CHEMTREC assistance, call: 703-527-3887

Section 2 - Composition, Information on Ingredients

CAS#	Chemical Name	Percent	ETNECS/ELINCS
94-36-0	Benzoyl peroxide	67-75	202-327-6
7732-18-5	Water	25-33	231-791-2

Section 3 - Hazards Identification

Emergency Overview

Appearance: white powder.

Danger! Risk of explosion by shock, friction, fire or other sources of ignition. Organic peroxide. Heat or contamination may cause hazardous decomposition. Peroxides and decomposition products are flammable and can ignite with explosive force if confined. Strong oxidizer. Contact with other material may cause a fire. Mutagen. Causes eye and skin irritation. May cause respiratory and digestive tract irritation. May cause sensitization by skin contact.

Target Organs: Eyes, skin.

Potential Health Effects

Eye: Causes eye irritation. Causes redness and pain.

Skin: Causes skin irritation. May cause skin sensitization, an allergic reaction, which becomes evident upon re-exposure to this material. Prolonged and/or repeated contact may cause defatting of the skin and dermatitis. May be harmful if absorbed through the skin.

Ingestion: May cause irritation of the digestive tract. May be harmful if swallowed. May cause human systemic effects by ingestion: hallucinations, distorted perceptions, nausea or vomiting and kidney, ureter and bladder changes.

Inhalation: May cause respiratory tract irritation. May be harmful if inhaled.

Decomposition products are toxic, and inhalation of these products can produce life threatening health effects.

Chronic: Laboratory experiments have resulted in mutagenic effects.

Section 4 - First Aid Measures

Eyes: Immediately flush eyes with plenty of water for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately.

Skin: Get medical aid. Flush skin with plenty of water for at least 15 minutes while removing contaminated clothing and shoes.

FIRE PREVENTION 1B

Inspection Of Fire Protection Systems And Special Hazards

Ingestion: Never give anything by mouth to an unconscious person. Get medical aid immediately. Do NOT induce vomiting. If conscious and alert, rinse mouth and drink 2-4 cupfuls of milk or water.

Inhalation: Remove from exposure and move to fresh air immediately. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Get medical aid.

Notes to Physician: Treat symptomatically and supportively.

Section 5 - Fire Fighting Measures

General Information: As in any fire, wear a self-contained breathing apparatus in pressure-demand, MSHA/NIOSH (approved or equivalent), and full protective gear. Will burn if involved in a fire. This material poses an explosion hazard when dry. This material is an explosion hazard when exposed to heat, mechanical shock, friction or when agitated.

Extinguishing Media: Use water spray to cool fire-exposed containers. Use water spray, dry chemical, carbon dioxide, or chemical foam. Do NOT use halogenated agents.

Flash Point: Not applicable.

Autoignition Temperature: 380 deg C (716 deg F)

Explosion Limits, Lower: Not available.

Upper: Not available.

NFPA Rating: (Estimated) Health: 2; Flammability: 4; Instability: 4; Special Hazard: OX

FIRE PREVENTION 1B

1310-73-2	100	2	2	No	No	No

Hazard Identification

Emergency Overview

Appearance: White deliquescent pellets, flakes or granules with no odor.

Immediate effects: Danger! Poison! Causes severe respiratory tract, eye and skin burns. May be fatal if swallowed. Harmful if inhaled. Cause damage to the following organs: Respiratory tract, skin, eye lens of cornea.

Potential Health Effects

Primary Routes of Entry: Absorbed through skin, eye contact, inhalation, ingestion.

Signs and Symptoms of Overexposure: Causes severe burns on contact with any body tissue. Vapor is irritating to the eyes and respiratory passages.

Eyes: Extremely hazardous in case of eye contact (corrosive). Causes severe eye burns.

Skin: Extremely hazardous in case of skin contact (corrosive). Skin contact produces severe burns. Hazardous in case of skin contact (permeator).

Ingestion: Extremely hazardous in case of ingestion. May be fatal if swallowed.

Inhalation: Extremely hazardous in case of inhalation (lung corrosive). Hazardous in case of inhalation.

Chronic Exposure: Extremely toxic and corrosive.

Chemical Listed As Carcinogen Or Potential Carcinogen: No.

See Toxicological Information

Physical and Chemical Properties

FIRE PREVENTION 1B

Inspection Of Fire Protection Systems And Special Hazards

Material Safety Data Sheet

Product Name: Arsine

Route of Entry:

Skin Contact	Skin Absorption	Eye Contact	Inhalation	Ingestion
Yes	No	Yes	No	Yes

Health Effects:

Exposure Limits	Irritant	Sensitization
Yes	Yes	No
Teratogen	Reproductive Hazard	Mutagen
No	No	No
Synergistic Effects: None Reported		

Carcinogenicity: NTP: No IARC: Yes OSHA: No

Eye Effects: No adverse effects anticipated.

Skin Effects: Dermatitis is associated with exposure to other arsenic compounds but not necessarily arsine.

Ingestion Effects: Ingestion is unlikely.

Inhalation Effects:

The symptoms of inhalation of this mixture are not well known. However, ARSINE IS AN EXTREMELY TOXIC GAS that destroys red blood cells and can cause widespread organ injury. Inhalation may cause headache, delirium, nausea, vomiting, general malaise, tightness in the chest, and pain in the abdomen and loins. Arsine may discolor urine to red or a darkened color, and the skin to a bronze or jaundiced color. Symptoms may not occur until several hours after exposure.

Arsine is listed by the International Agency for Research on Cancer as a Group 1 Carcinogen (see Arsenic and Certain Arsenic Compounds).

NFPA HAZARD CODES HMIS HAZARD CODES RATINGS SYSTEM

NFPA Hazard Codes	HMIS Hazard Codes	Ratings System
Health: 4	Health: 4	0 = No Hazard
Flammability: 4	Flammability: 4	1 = Slight Hazard
Reactivity: 0	Reactivity: 0	2 = Moderate Hazard
		3 = Serious Hazard
		4 = Severe Hazard

4. First Aid Measures

Eyes: Flush contaminated eye(s) with copious quantities of water. Part eyelids to assure complete flushing. Continue for a minimum of 30 minutes. See a physician for follow up treatment as soon as possible.

Skin: Flush affected area with copious quantities of water. Remove affected clothing as rapidly as possible.

 International CHEMTREC, call: 1-703-527-3887
 For non-emergency assistance, call: 1-281-441-4400

Section 2: Composition and Information on Ingredients

Name	CAS #	% by Weight
Calcium carbide	75-20-7	100
Toxicological Data on Ingredients: Calcium carbide LD50: Not available. LC50: Not available.		

Section 3: Hazards Identification

Potential Acute Health Effects:

Hazardous in case of ingestion, of inhalation. Slightly hazardous in case of skin contact (irritant), or eye contact (irritant).

Potential Chronic Health Effects:

Carcinogenic Effects: Not available.

Mutagenic Effects: Not available.

Teratogenic Effects: Not available.

Developmental Toxicity: Not available.

The substance is toxic to lungs, mucous membranes. Repeated or prolonged exposure to the substance can produce target organs damage.

Section 4: First Aid Measures

Eye Contact: No known effect on eye contact, rinse with water for a few minutes.

NFPA Hazard Codes	HMIS Hazard Codes	Ratings System
Health: 1	Health: 1	0 = No Hazard
Flammability: 4	Flammability: 4	1 = Slight Hazard
Reactivity: 2	Reactivity: 2	2 = Moderate Hazard
		3 = Serious Hazard
		4 = Severe Hazard

FIRE PREVENTION 1B

Inspection Of Fire Protection Systems And Special Hazards

Material Safety Data Sheet Ammonia

Route of Entry:

Skin Contact	Skin Absorption	Eye Contact	Inhalation	Ingestion
Yes	No	Yes	Yes	No

Health Effects:

Exposure Limits	Irritant	Sensitization
Yes	Yes	No
Teratogen	Reproductive Hazard	Mutagen
No	No	Yes
Synergistic Effects: None Reported		

Carcinogenicity: NTP: No IARC: No OSHA: No

Eye Effects: Mild concentrations of product will cause conjunctivitis. Contact with higher concentrations of product will cause swelling of the eyes and lesions with a possible loss of vision.

Skin Effects: Mild concentrations of product will cause dermatitis or conjunctivitis. Contact with higher concentrations of product will cause caustic-like dermal burns and inflammation. Toxic level exposure may cause skin lesions resulting in early necrosis and scarring.

Ingestion Effects: Since product is a gas at room temperature, ingestion is unlikely.

Inhalation Effects:

Corrosive and irritating to the upper respiratory system and all mucous type tissue. Depending on the concentration inhaled, it may cause burning sensations, coughing, wheezing, shortness of breath, headache, nausea, with eventual collapse.

Inhalation of excessive amounts affects the upper airway (larynx and bronchi) by causing caustic-like burning resulting in edema and chemical pneumonitis. If it enters the deep lung, pulmonary edema will result. Pulmonary edema and chemical pneumonitis are potentially fatal conditions.

NFPA Hazard Codes	HMIS Hazard Codes	Ratings System

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

Summary:

Classifying a hazardous material is the first step in inspecting storage, use, and display of such products. Using the CFC, an inspector can classify a material and determine the best methods of protecting such occupancies.

Evaluation:

The student will complete the formative test at a time determined by the instructor.

Assignment:

Review your notes and read the California Fire Code, CBSC, 2007 Edition, Section 2701.2 and Appendix E in order to prepare yourself for the upcoming test. Study for our next session.

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

Summary:

Due to the prevalence of hazardous materials in our communities, you may become complacent about the hazards associated with them. With a basic understanding of the basic permit and exempt amounts of hazardous materials, the inspection and enforcement of the CFC will provide for a safe working environment for employees and the public.

In addition, code compliance for hazardous materials in all occupancies will provide a safer environment for the first responders.

Evaluation:

The student will complete the activity and formative test at a time determined by the instructor.

Assignment:

Review your notes and read the California Fire Code, CBSC, 2007 Edition, Chapters 27 and 34, and Appendices Chapter 1 and E, Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Chapter 11, and Fire Prevention 1B Student Supplement, SFT, 2009 Edition, Pages 57-63 in order to prepare yourself for the upcoming test. Study for our next session.

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

INDIVIDUAL ACTIVITY 3-10-1: HAZARDOUS MATERIALS PERMIT AND MAXIMUM ALLOWABLE QUANTITIES

Time Frame:	1:00
Materials Needed:	<ul style="list-style-type: none">• MSDS for calcium hypochlorite• <u>California Fire Code</u>, CBSC, 2007 Edition, Chapters 27 and 34, and Appendices Chapter 1 and E• Pen or pencil
Introduction:	This activity provides the students the opportunity to determine permit and Maximum Allowable Quantities of hazardous materials.
Directions:	<ol style="list-style-type: none">1. Using the CFC and MSDS answer the following questions.2. You have 40 minutes to complete this activity.3. Be prepared to discuss your answers with the class.

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

	<u>Permit Amount</u>	<u>Maximum Allowable Quantity</u>
	CFC AC1, 105.6.20	Tables 2703.1.1(1) through 2703.1.1(4)
1. Chloric Acid (liquid), Class 3 oxidizer, stored outdoors	<u>1 gallon (With exceptions. See footnote a)</u>	<u>40 pounds</u>
<i>California Fire Code, CBSC, 2007 Edition, Tables A105.6.20 and 2703.1.1(3)</i>		
2. Sulfur, flammable solid, indoor storage/sprinklered building	<u>100 pounds</u>	<u>250 pounds</u>
<i>California Fire Code, CBSC, 2007 Edition, Tables A105.6.20 and 2703.1.1(1)</i>		
3. Potassium hydroxide (solid), toxic material, indoor storage	<u>100 pounds</u>	<u>500 pounds</u>
<i>California Fire Code, CBSC, 2007 Edition, Tables A105.6.20 and 2703.1.1(2)</i>		
4. Nitric acid (liquid), corrosive, outdoor storage	<u>55 gallons</u>	<u>2000 pounds</u>
<i>California Fire Code, CBSC, 2007 Edition, Tables A105.6.20 and 2703.1.1(4)</i>		
5. Vinyl acetate, (liquid) unstable materials, Class 2, indoor use, nonsprinklered building	<u>5 gallons</u>	<u>50 pounds</u>
<i>California Fire Code, CBSC, 2007 Edition, Tables A105.6.20 and 2703.1.1(1)</i>		
6. White phosphorous (solid), pyrophoric, use-closed system, nonsprinklered building	<u>Any amount</u>	<u>Not permitted</u>
<i>California Fire Code, CBSC, 2007 Edition, Tables A105.6.20 and 2703.1.1(1) footnote g</i>		
7. What is the main ingredient listed on the MSDS?	<u>Calcium Hypochlorite</u>	
	MSDS	
8. What is the percentage by weight of the main ingredient?	<u>65%</u>	
	MSDS	

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

9. What is the DOT hazard class?

5.1 (oxidizer)

MSDS

10. What is the physical state?

Solid

MSDS

11. What is the hazard category according to the CFC?

Class 3 oxidizer

California Fire Code, CBSC, 2007 Edition, Appendix E, Section E102.1.7.1

12. What is the permit amount for calcium hypochlorite?

10 pounds

California Fire Code, CBSC, 2007 Edition, Table 105.6.20

13. What is the MAQ for calcium hypochlorite used in an open system, outdoors?

4 pounds

California Fire Code, CBSC, 2007 Edition, Table 2703.1.1(3)

14. What is the MAQ for calcium hypochlorite stored in a sprinklered building?

20 pounds

California Fire Code, CBSC, 2007 Edition, Table 2703.1.1(1) (including footnote D)

15. What is the MAQ for calcium hypochlorite used in an open system in a nonsprinklered building?

2 pounds

California Fire Code, CBSC, 2007 Edition, Table 2703.1.1(1)

Material Safety Data Sheet

Omega Chemistries
 7623 North 67th Avenue, Suite 301
 Glendale AZ 85301

PRODUCT NAME: PPG CALCIUM HYPOCHLORITE TABLETS
 DATE: 05/20/96
 EDITION: 003
 TRADE NAME: CALCIUM HYPOCHLORITE TABLETS
 CHEM NAME/SYN: PPG 3" CALCIUM HYPOCHLORITE TABLETS, CAL HYPO
 CHEMICAL FAMILY: HYPOCHLORITE
 FORMULA: CA (OCL) 2
 CAS NUMBER: 007778-54-3
 U.S. DOT SHIPPING NAME: CALCIUM HYPOCHLORITE, HYDRATED
 U.S. DOT HAZARD CLASS: 5.1 (OXIDIZER)
 SUBSIDIARY RISK: N/A
 I.D. NUMBER: UN2880
 PACKING GROUP: II
 REPORTABLE QUANTITY: 10 LBS/4.5 KG
 IMO DESCRIPTION: CALCIUM HYPOCHLORITE, HYDRATED, CLASS 5.1, UN2880, PACKING GROUP II, RQ.

SECTION 1 - PHYSICAL DATA

BOILING POINT @ 760 MM HG: DECOMPOSES @ 180°C
 VAPOR DENSITY (AIR=1): N/A
 SPECIFIC GRAVITY (H₂O=1): N/A
 PH OF SOLUTIONS: ALKALINE
 FREEZING/MELTING POINT: N/A
 SOLUBILITY (WEIGHT % IN WATER): 217 G/L @ 27°C
 BULK DENSITY: N/A
 VOLUME % VOLATILE: N/A
 VAPOR PRESSURE: N/A
 EVAPORATION RATE: N/A
 HEAT OF SOLUTION: SLIGHTLY EXOTHERMIC
 APPEARANCE AND ODOR: WHITE TABLETS WITH SLIGHT CHLORINE ODOR

SECTION 2 - INGREDIENTS

MATERIAL	PERCENT
CALCIUM HYPOCHLORITE (65% AVAILABLE CHLORINE)	65
INERT (INCLUDES 5.5 - 10% MOISTURE)	35

SECTION 3 - FIRE/EXPLOSION HAZARD DATA

FLASH POINT (METHOD USED): NONE
 FLAMMABLE LIMITS IN AIR (% BY VOLUME) LEL: N/A UEL: N/A
 EXTINGUISHING MEDIA: WATER ONLY. SMOTHERING INEFFECTIVE. PRODUCT SUPPLIES OWN OXYGEN. SPECIAL FIRE FIGHTING PROCEDURES: FIRE FIGHTERS MUST WEAR NIOSH/MSHA APPROVED, PRESSURE DEMAND SELF-CONTAINED BREATHING APPARATUS WITH FULL FACE PIECE FOR POSSIBLE EXPOSURE TO HAZARDOUS GASES.
 UNUSUAL FIRE AND EXPLOSION HAZARDS: DECOMPOSES AT 180 C RELEASING OXYGEN GAS; CONTAINERS MAY RUPTURE.

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

SECTION 4 - HEALTH HAZARD DATA

TOXICITY DATA:

LC50 INHALATION: (RAT) NO MORTALITY @ 3.5 MG/L (1 HR)
LD50 DERMAL: (RABBIT) >1000 MG/KG
SKIN/EYE IRRITATION: SEE SECTION 5
LD50 INGESTION: SEE SECTION 5
FISH, LC50 (LETHAL CONCENTRATION): TLM 96 HR.: 10-1 PPM

CLASSIFICATION:

INHALATION: IRRITATING
SKIN: SLIGHTLY TOXIC
SKIN/EYE: CORROSIVE
INGESTION: SLIGHTLY TOXIC
AQUATIC: HIGHLY TOXIC

SECTION 5 - EFFECTS OF OVEREXPOSURE

IS CHEMICAL LISTED AS A CARCINOGEN OR POTENTIAL CARCINOGEN?

NTP - NO IARC - NO OSHA - NO

MEDICAL CONDITIONS GENERALLY AGGRAVATED BY EXPOSURE: NONE KNOWN

PERMISSIBLE EXPOSURE LIMITS: NONE ESTABLISHED BY OSHA OR ACGIH FOR THIS PRODUCT.

PPG INTERNAL PERMISSIBLE EXPOSURE LIMIT (IPEL): 1 MG/CU.M., 8-HOUR TWA (TIME WEIGHTED AVERAGE); 2 MG/CU.M. STEL (SHORT-TERM EXPOSURE LIMIT).

ACUTE:

INHALATION: INHALATION OF CALCIUM HYPOCHLORITE DUST AND DEPOSITION OF PARTICLES IN THE RESPIRATORY TRACT CAN LEAD TO IRRITATION OF THE TISSUE AND CAUSE A VARIETY OF EFFECTS. THESE EFFECTS ARE DEPENDENT ON CONCENTRATION AND INCLUDE: UPPER RESPIRATORY TRACT IRRITATION, NASAL CONGESTION, COUGHING, SORE THROAT, LARYNGITIS, AND SHORTNESS OF BREATH. IN OPERATIONS WHERE THERE ARE HIGH CONCENTRATIONS OF RESPIRABLE PARTICULATES, PULMONARY EDEMA (FLUID IN THE LUNG) MAY BE PRODUCED. IF NOT TREATED IMMEDIATELY, PULMONARY EDEMA CAN BE LIFE THREATENING. SINCE THIS PRODUCT IS IN TABLET FORM, PARTICLES OF RESPIRABLE SIZE ARE NOT GENERALLY ENCOUNTERED.

EYE/SKIN: CALCIUM HYPOCHLORITE IS CORROSIVE TO THE EYES. CONTACT OF CALCIUM HYPOCHLORITE DUST WITH THE EYES, EVEN A MINUTE AMOUNT FOR A SHORT DURATION, CAN CAUSE SEVERE IRRITATION AND EVEN BLINDNESS. CONTACT WITH THE SKIN MAY CAUSE SEVERE IRRITATION, BURNS, OR TISSUE DESTRUCTION.

IN STUDIES UTILIZING RABBITS, THE SKIN IRRITATION SCORE WAS 8/8 AND THE EYE IRRITATION SCORE WAS 98.5/110. THE CLASSIFICATION FOR BOTH OF THESE IS CORROSIVE.

INGESTION: CALCIUM HYPOCHLORITE, IF SWALLOWED, CAUSES SEVERE BURNS TO THE DIGESTIVE TRACT AND CAN BE FATAL.

CHRONIC

GENOTOXICITY: CALCIUM HYPOCHLORITE PRODUCED POSITIVE RESPONSES IN IN-VITRO ASSAYS USING BACTERIAL SYSTEMS (THE AMES TEST) AND CHROMOSOMAL ABERRATIONS IN CHINESE HAMSTER FIBROBLASTS. IN A WHOLE ANIMAL EXPERIMENT (MOUSE MICRONUCLEUS TEST), EXPOSURES RANGING FROM 20 TO 160 MG/KG PRODUCED NO COMPOUND RELATED CHROMOSOMAL ABNORMALITIES.

CARCINOGENESIS: ALTHOUGH NO STUDY HAS BEEN CONDUCTED WITH CALCIUM HYPOCHLORITE, THE CARCINOGENIC POTENTIAL OF SODIUM HYPOCHLORITE WAS STUDIED IN F344 RATS. AFTER 104 WEEKS OF DRINKING WATER CONTAINING UP TO 2000 PPM SODIUM HYPOCHLORITE, THERE WAS NO EVIDENCE THAT THIS CHEMICAL PRODUCED ANY CARCINOGENIC RESPONSE. IN ADDITION, THIS EXPOSURE DID NOT RESULT IN ANY ADVERSE EFFECTS IN BLOOD, CLINICAL CHEMISTRY, OR OTHER TARGET ORGANS.

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

ONE OF THE MAJOR USES OF CALCIUM HYPOCHLORITE IS AS A SOURCE OF CHLORINE FOR WATER SANITIZATION IN DRINKING AND RECREATIONAL WATER. STUDIES HAVE BEEN CONDUCTED TO DETERMINE THE LONG-TERM EFFECTS OF CHLORINATED DRINKING WATER. SEVEN GENERATIONS OF RATS WERE GIVEN 100 PPM CHLORINE IN THEIR DRINKING WATER. NO DIFFERENCE IN FERTILITY, GROWTH, BLOOD PARAMETERS, OR SPECIFIC ORGAN TOXICITY WAS OBSERVED BETWEEN CONTROL AND EXPOSED ANIMALS. TWO SEPARATE ANIMAL STUDIES CONDUCTED BY DIFFERENT GOVERNMENT AGENCIES DETERMINED THAT THE CHLORINATION OF MUNICIPAL DRINKING WATER DID NOT RESULT IN TOXICITY TO THE DEVELOPING MOUSE FETUS. SAFE HANDLING OF THIS MATERIAL ON A LONG-TERM BASIS SHOULD EMPHASIZE MINIMIZING REPEATED ACUTE EXPOSURES.

EMERGENCY AND FIRST AID PROCEDURES

INHALATION: REMOVE TO FRESH AIR. IF NOT BREATHING, GIVE ARTIFICIAL RESPIRATION, PREFERABLY MOUTH-TO-MOUTH. IF BREATHING IS DIFFICULT, GIVE OXYGEN. CALL A PHYSICIAN.

EYE OR SKIN CONTACT: FLUSH WITH PLENTY OF WATER FOR AT LEAST 15 MINUTES, WHILE REMOVING CONTAMINATED CLOTHING AND SHOES. FOR EYE CONTACT, GET IMMEDIATE MEDICAL ATTENTION. IF SKIN IRRITATION OCCURS, GET MEDICAL ATTENTION.

INGESTION: IF CONSCIOUS, DRINK LARGE QUANTITIES OF WATER AND ANY COMMON COOKING (VEGETABLE) OIL, IF AVAILABLE. DO NOT INDUCE VOMITING. TAKE IMMEDIATELY TO A HOSPITAL OR PHYSICIAN. IF UNCONSCIOUS, OR IN CONVULSIONS, TAKE IMMEDIATELY TO A HOSPITAL. DO NOT ATTEMPT TO INDUCE VOMITING OR GIVE ANYTHING BY MOUTH TO AN UNCONSCIOUS PERSON.

NOTES TO PHYSICIAN (INCLUDING ANTIDOTES): TREAT SYMPTOMATICALLY.

SECTION 6 - REACTIVITY DATA

STABILITY: UNSTABLE

CONDITIONS TO AVOID: CONTAMINATION OR EXCESSIVE HEAT ABOVE 177°C

HAZARDOUS POLYMERIZATION: WILL NOT OCCUR

CONDITIONS TO AVOID: NONE - WILL NOT POLYMERIZE

INCOMPATIBILITY (MATERIALS TO AVOID): ACIDS, COMBUSTIBLE MATERIALS, ORGANICS, REDUCING AGENTS

HAZARDOUS DECOMPOSITION PRODUCTS: ACIDS OR AMMONIA CONTAMINATION WILL RELEASE TOXIC GASES. EXCESSIVE HEAT WILL CAUSE DECOMPOSITION RESULTING IN THE RELEASE OF OXYGEN AND CHLORINE GAS

SECTION 7 - SPILL OR LEAK PROCEDURES

STEPS TO BE TAKEN IF MATERIAL IS SPILLED OR RELEASED:

NOTE: USE EXTREME CAUTION IN HANDLING SPILLED MATERIAL. CONTAMINATION WITH ORGANIC OR COMBUSTIBLE MATERIAL MAY CAUSE FIRE OR VIOLENT DECOMPOSITION. IF FIRE OR DECOMPOSITION OCCURS IN AREA OF SPILL, IMMEDIATELY DOUSE WITH PLENTY OF WATER. OTHERWISE, SWEEP UP ALL VISIBLE MATERIAL USING A CLEAN, DRY SHOVEL AND BROOM AND DISSOLVE MATERIAL IN WATER. DISPOSE OF WASTE MATERIAL AS OUTLINED BELOW.

WASTE DISPOSAL METHOD: SPILLED MATERIAL THAT HAS BEEN SWEEP UP AND DISSOLVED IN WATER SHOULD BE USED IMMEDIATELY IN THE NORMAL APPLICATION FOR WHICH CALCIUM HYPOCHLORITE IS BEING CONSUMED. IF THIS IS NOT POSSIBLE, CAREFULLY NEUTRALIZE DISSOLVED MATERIAL BY ADDING HYDROGEN PEROXIDE (ONE PINT OF 35% HYDROGEN PEROXIDE SOLUTION PER POUND OF CALCIUM HYPOCHLORITE TO BE NEUTRALIZED) THEN DILUTE THE NEUTRALIZED MATERIAL WITH PLENTY OF WATER AND FLUSH TO SEWER. **NOTE:** ONLY PROPERLY NEUTRALIZED MATERIAL SHOULD BE FLUSHED TO SEWER. UNNEUTRALIZED MATERIAL CAN CAUSE ENVIRONMENTAL DAMAGE TO RECEIVING WATER OR CAN INTERFERE WITH TREATMENT PLANT OPERATION. FOR ON-SITE NEUTRALIZATION, CAREFULLY AND SLOWLY POUR THE APPROPRIATE QUANTITY OF 35% HYDROGEN PEROXIDE SOLUTION OVER ALL SPILLED MATERIAL THEN FLUSH

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

AREA WITH PLENTY OF WATER. COMMENTS: CARE MUST BE TAKEN WHEN USING OR DISPOSING OF CHEMICAL MATERIALS AND/OR THEIR CONTAINERS TO PREVENT ENVIRONMENTAL CONTAMINATION. IT IS YOUR DUTY TO DISPOSE OF THE CHEMICAL MATERIALS AND/OR THEIR CONTAINERS IN ACCORDANCE WITH THE CLEAN AIR ACT, THE CLEAN WATER ACT, THE RESOURCE CONSERVATION AND RECOVERY ACT, FIFRA, AS WELL AS ANY OTHER RELEVANT FEDERAL, STATE, OR LOCAL LAWS/REGULATIONS REGARDING DISPOSAL.

SECTION 8 - SPECIAL PROTECTION INFORMATION

RESPIRATORY PROTECTION: IF DUSTY CONDITIONS ARE ENCOUNTERED, USE NIOSH/MSHA APPROVED RESPIRATOR WITH ACID GAS CARTRIDGE AND DUST PREFILTER. THE RESPIRATOR USE LIMITATIONS SPECIFIED BY NIOSH/MSHA OR THE MANUFACTURER MUST BE OBSERVED. RESPIRATORY PROTECTION PROGRAMS MUST BE IN ACCORDANCE WITH 29 CFR 1910.134.

VENTILATION (TYPE): NONE, UNLESS DUSTY CONDITIONS ARE ENCOUNTERED.

EYE PROTECTION: CHEMICAL SAFETY GOGGLES

GLOVES: NATURAL OR SYNTHETIC RUBBER

OTHER PROTECTIVE EQUIPMENT: BOOTS, APRONS, OR CHEMICAL SUITS SHOULD BE USED WHEN NECESSARY TO PREVENT SKIN CONTACT. PERSONAL PROTECTIVE CLOTHING AND USE OF EQUIPMENT MUST BE IN ACCORDANCE WITH 29 CFR 1910.132 (GENERAL REQUIREMENTS), .133 (EYE & FACE PROTECTION) AND .138 (HAND PROTECTION).

SECTION 9 - SPECIAL PRECAUTIONS

PRECAUTIONS TO BE TAKEN DURING HANDLING AND STORING:

DO NOT GET IN EYES, ON SKIN OR ON CLOTHING.

KEEP IN ORIGINAL CONTAINER IN A COOL, DRY PLACE.

KEEP CONTAINER CLOSED WHEN NOT IN USE.

KEEP AWAY FROM HEAT SOURCES, SPARKS, OPEN FLAMES AND LIGHTED TOBACCO PRODUCTS. USE ONLY A CLEAN, DRY SCOOP MADE OF METAL OR PLASTIC EACH TIME THIS PRODUCT IS TAKEN FROM CONTAINER.

DO NOT ADD THIS PRODUCT TO ANY DISPENSING DEVICE CONTAINING REMNANTS OF ANY OTHER PRODUCT. SUCH USE MAY CAUSE VIOLENT REACTION LEADING TO FIRE OR EXPLOSION. ADD THIS PRODUCT ONLY TO WATER.

MAY CAUSE FIRE OR EXPLOSION IF MIXED WITH OTHER CHEMICALS.

FIRE MAY RESULT IF CONTAMINATED WITH ACIDS OR EASILY COMBUSTIBLE MATERIAL SUCH AS OIL, KEROSENE, GASOLINE, PAINT PRODUCTS AND MOST OTHER ORGANIC MATERIALS.

WASH HANDS AFTER HANDLING.

DO NOT REUSE CONTAINER. RESIDUAL MATERIAL REMAINING IN EMPTY DRUM CAN REACT TO CAUSE FIRE. THOROUGHLY FLUSH EMPTY CONTAINER WITH WATER THEN DESTROY BY PLACING IN TRASH COLLECTION. DO NOT CONTAMINATE WATER, FOOD, OR FEED BY STORAGE OR DISPOSAL.

OTHER PRECAUTIONS:

KEEP OUT OF REACH OF CHILDREN.

STRONG OXIDIZER - FIRE MAY RESULT FROM CONTACT WITH HEAT, ACIDS, ORGANIC OR COMBUSTIBLE MATTER.

MAY BE FATAL OR HARMFUL IF SWALLOWED.

MAY CAUSE CHEMICAL BURNS.

IRRITATING TO NOSE AND THROAT - AVOID BREATHING DUST.

COMMENTS:

TSCA-CALCIUM HYPOCHLORITE IS ON THE TSCA INVENTORY UNDER CAS #7778-54-3. SARA TITLE III - A) 311/312 CATEGORIES - ACUTE AND REACTIVITY, B) NOT LISTED IN SECTION 313, C) NOT LISTED AS AN "EXTREMELY HAZARDOUS SUBSTANCE" IN SECTION 302.

CERCLA - LISTED IN TABLE 302.4 OF 40 CFR PART 302 AS A HAZARDOUS SUBSTANCE WITH A REPORTABLE QUANTITY OF 10 POUNDS. RELEASES TO AIR, LAND OR WATER WHICH EXCEED THE RQ MUST BE REPORTED TO THE NATIONAL RESPONSE CENTER, 800-424-8802.

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

RCRA - WASTE CALCIUM HYPOCHLORITE AND CONTAMINATED SOILS/MATERIALS FROM SPILL CLEANUP ARE D001 HAZARDOUS WASTE AS PER 40 CFR 261.21(A)(4) AND MUST BE DISPOSED OF ACCORDINGLY UNDER RCRA.

FIFRA - CALCIUM HYPOCHLORITE IS REGISTERED WITH EPA AS A PESTICIDE (EPA REG. NO. 748-295). NSF - PPG CALCIUM HYPOCHLORITE IS CERTIFIED FOR MAXIMUM USE AT 46 MG/L UNDER ANSI/NSF STANDARD 60.

Inspection Of Fire Protection Systems And Special Hazards

Topic: 4-1: Portable Fire Extinguisher Classifications

Time Frame: 1:00

Level Of Instruction: Level II

Authority: 1998 NFPA 1031: Section 3-3.7

Behavioral Objective:

Condition: Given a formative test

Behavior: The student will confirm a knowledge of portable fire extinguisher classifications

Standard: With a minimum 80% accuracy according to the information contained in Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Chapter 8

Materials Needed:

- Conference board/pads with markers/erasers
- Appropriate audiovisual training aids and devices
- Different types of portable fire extinguishers

References:

- California Fire Code, CBSC, 2007 Edition, Sections 904 and 906
- Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Chapter 8
- NFPA 10: Standard on Portable Fire Extinguishers, NFPA, 2005 Edition

Preparation: Each instructor must develop a motivational statement on why the student should learn the upcoming material. The purpose is to establish relevancy of the lesson to the audience. The ACID BASE acronym can be used to help develop student motivation.

A ttention (attract)	B egin
C uriosity (arouse)	A ssociation
I nterest (create)	S tudents
D esire (stimulate)	E xperience

Cite examples or use related illustrations of near-miss incidents, injuries, or fatalities. Write this section "from the heart." Be creative! Have fun with it or be serious, but remember the goal is to stimulate student motivation.

RETIRED CURRICULUM

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

Summary:

Portable fire extinguishers are the most common type of fire protection in use. The inspector must know the fire extinguisher classes to match the correct extinguisher to the occupancy to be protected.

Evaluation:

The student will complete the formative test at a time determined by the instructor.

Assignment:

Review your notes and read Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Chapter 8 in order to prepare yourself for the upcoming test. Study for our next session.

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

- Topic:** 4-2: Portable Fire Extinguisher Placement
- Time Frame:** 0:30
- Level Of Instruction:** Level II
- Authority:** 1998 NFPA 1031: Section 3-3.7
- Behavioral Objective:**
- Condition:** Given an activity and formative test
 - Behavior:** The student will confirm a knowledge of the considerations given when distributing and locating portable fire extinguishers
 - Standard:** With a minimum 80% accuracy according to the information contained in Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Chapter 8 and Fire Prevention 1B Student Supplement, SFT, 2009 Edition, Pages 65-66
- Materials Needed:**
- Conference board/pads with markers/erasers
 - Appropriate audiovisual training aids and devices
 - Individual Activity 4-2-1: Extinguisher Placement
- References:**
- Barclays Official California Code of Regulations Title 19, West Group, Chapter 3
 - California Fire Code, CBSC, 2007 Edition, Section 906
 - Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Chapter 8
 - Private Fire Protection and Detection, IFSTA, Second Edition, Chapter 4
- Preparation:** Each instructor must develop a motivational statement on why the student should learn the upcoming material. The purpose is to establish relevancy of the lesson to the audience. The ACID BASE acronym can be used to help develop student motivation.

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

Summary:

If a fire extinguisher is to do its job, it must be matched to the proper hazard. It must also be of sufficient size to deal with the type of fire that could be expected in that area. It must also be in a place that is easily available to all occupants.

Evaluation:

The student will complete the activity and formative test at a time determined by the instructor.

Assignment:

Review your notes and read Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Chapter 8 and Fire Prevention 1B Student Supplement, SFT, 2009 Edition, Pages 65-66 in order to prepare you for the upcoming test. Study for our next session.

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

INDIVIDUAL ACTIVITY 4-2-1: EXTINGUISHER PLACEMENT

Time Frame: 0:15

Materials Needed:

- California Fire Code, CBSC, 2007 Edition, Section 906
- Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Chapter 8, Tables 8.1 and 8.2
- Pen or pencil

Introduction:

This activity provides the students the opportunity to determine fire extinguisher size and placement location.

Directions:

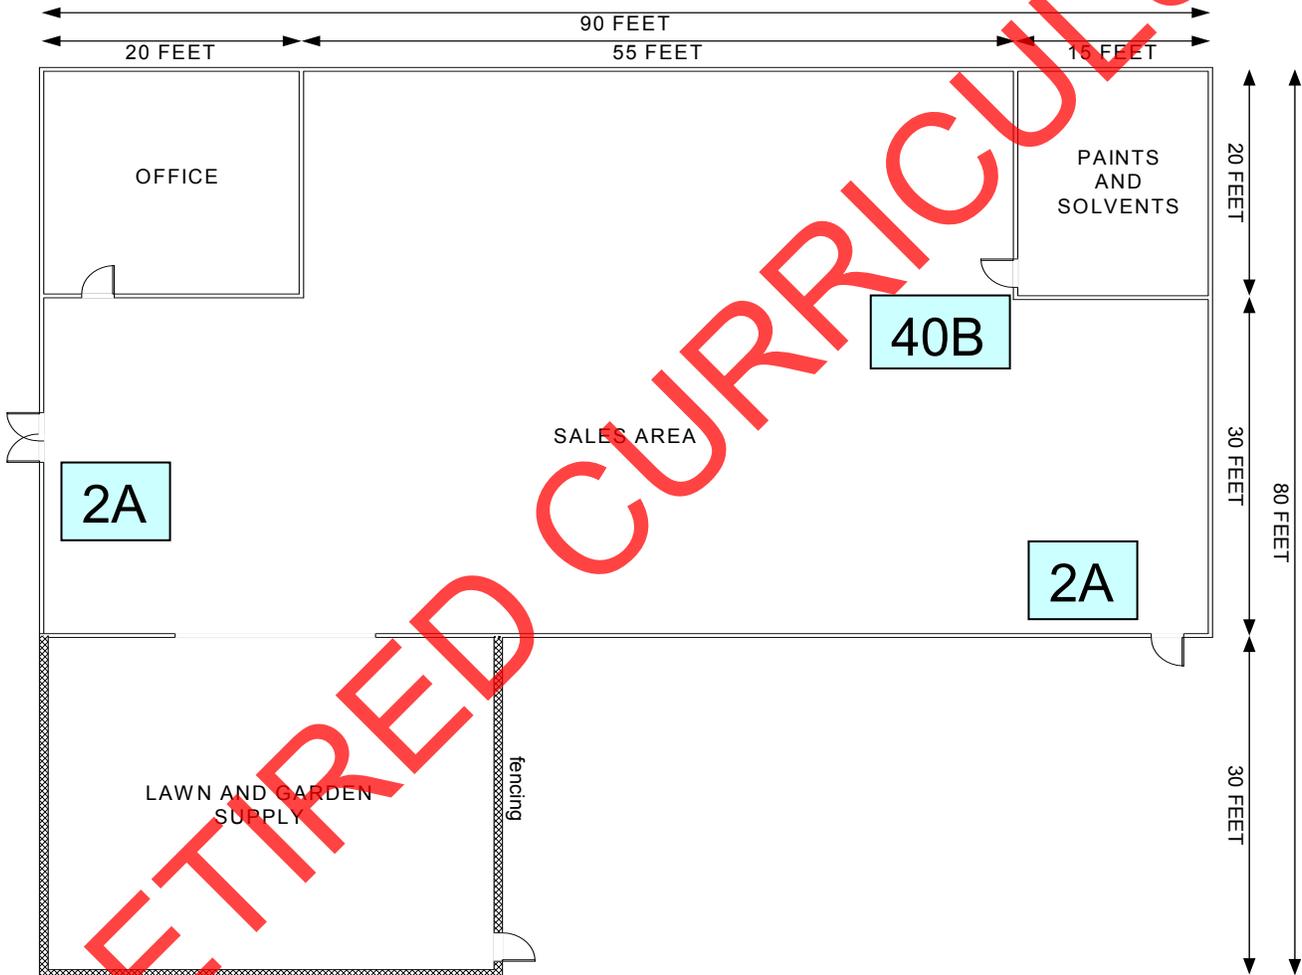

1. Review Tables 8.1 and 8.2.
2. Use the floor plan the Close Hardware Company on the following page.
3. Identify the minimum number of extinguishers required.
4. Mark the location for the proper placement of the extinguisher(s).
5. You have 10 minutes to complete this activity.
6. Be prepared to discuss your answers with the class.

Note:

Table 8.1 has an error. Minimum rating for extra (high) hazard occupancy is 4-A, not 40A.

EXTINGUISHER PLACEMENT EXERCISE

You are an inspector checking Close Hardware Company, a new business in town. Using information found in your IFSTA manual and the CFC, indicate on the floor plan below the type of extinguishers you will require and where they will be placed. Be prepared to explain your decision.

instructor note:

There are multiple answers possible. Stress the following:

- A 40-B extinguisher required for extra hazard (within 30 feet).
- One 2-A unit per 1,500 square feet for ordinary hazard. Total square feet above = 2,750; at least two units are required.
- 2-A units should be placed within 75 feet of travel from all areas.

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

Summary:

The fire extinguisher can be as important as the automatic fire sprinkler system. Oftentimes, the extinguisher is overlooked as "not important." Since the extinguisher is the first appliance used to extinguish a fire, it must be inspected properly to determine its condition and usability. When inspecting various types and classes of extinguishers, the inspector uses many reference materials. This information allows the inspector to interpret referenced standards and regulations.

Evaluation:

The student will complete the formative test at a time determined by the instructor.

Assignment:

Review your notes and read Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Chapter 8 in order to prepare you for the upcoming test. Study for our next session.

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

Summary:

Fixed fire protection systems are everywhere and range from small to complex systems. One of the responsibilities of an inspector is to inspect many of these systems. To properly perform these inspections, an inspector needs a working knowledge of how these systems operate and their components. In addition to the six common types of systems, unusual conditions or exotic materials can require a special system to be designed.

Evaluation:

The student will complete the formative test at a time determined by the instructor.

Assignment:

Review your notes and read Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Chapter 8 in order to prepare yourself for the upcoming test. Study for our next session.

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

Topic: 5-2: Procedures For Inspecting Fixed Fire Protection Systems

Time Frame: 1:00

Level Of Instruction: Level II

Authority: 1998 NFPA 1031: Section 3-3.5

Behavioral Objective:

Condition: Given a formative test

Behavior: The student will confirm a knowledge of the procedures for inspecting fixed fire protection systems

Standard: With a minimum 80% accuracy according to the information contained in the California Fire Code, CBSC, 2007 Edition, Chapter 9 and Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Chapter 8

Materials Needed:

- Conference board/pads with markers/erasers
- Appropriate audiovisual training aids and devices

References:

- California Fire Code, CBSC, 2007 Edition, Chapter 9
- Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Chapter 8
- Private Fire Protection and Detection, IFSTA, Second Edition, Chapter 5

Preparation:

Each instructor must develop a motivational statement on why the student should learn the upcoming material. The purpose is to establish relevancy of the lesson to the audience. The ACID BASE acronym can be used to help develop student motivation.

A ttention (attract)	B egin
C uriosity (arouse)	A ssociation
I nterest (create)	S tudents
D esire (stimulate)	E xperience

Cite examples or use related illustrations of near-miss incidents, injuries, or fatalities. Write this section "from the heart." Be creative! Have fun with it or be serious, but remember the goal is to stimulate student motivation.

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

Summary:

Fire in commercial kitchens can be prevented if construction is adequate, if maintenance is performed properly, and if sufficient fire protection hardware is furnished. An inspector must be able to verify these conditions and any actions required for compliance. Several tests are necessary to ensure that these systems operate as designed.

Evaluation:

The student will complete the activity and formative test at a time determined by the instructor.

Assignment:

Review your notes and read Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Chapters 4 and 8, and Fire Prevention 1B Student Supplement, SFT, 2009 Edition, Pages 70-72 in order to prepare yourself for the upcoming test. Study for our next session.

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

INDIVIDUAL ACTIVITY 5-3-1: INSPECTING FIXED FIRE PROTECTION SYSTEMS

Time Frame:	0:20
Materials Needed:	<ul style="list-style-type: none">• <u>Fire Inspection and Code Enforcement</u>, IFSTA, Sixth Edition, Chapters 4 and 8• <u>California Fire Code</u>, CBSC, 2007 Edition, Chapter 9• Pen or pencil
Introduction:	This activity provides the students the opportunity to increase their knowledge of special fixed fire protection systems.
Directions:	<ol style="list-style-type: none">1. Using the referenced resources, answer the questions below.2. You have 15 minutes to complete this activity.3. Be prepared to discuss your answers with the class.

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

1. List the appropriate NFPA standard used to design and install fixed fire protection systems.

Carbon dioxide	NFPA	<u>12</u>	IFSTA, Page 254
Dry chemical	NFPA	<u>17</u>	IFSTA, Page 249
Wet chemical	NFPA	<u>17A</u>	IFSTA, Page 252
Clean agent	NFPA	<u>2001</u>	IFSTA, Page 236
Foam	NFPA	<u>11</u>	IFSTA, Page 258

2. What is the criterion for determining when a gaseous extinguishing system, such as CO₂ or clean agent, must be replenished?

Must be replenished when the net weight of the gas has dropped more than 10%

IFSTA, Page 253

3. At what frequency must a preengineered system be service tested?

Every 6 months

California Fire Code, CBSC, 2007 Edition, Section 904.11.6.4 page 100

4. What section of the CFC regulates the cleaning of hoods and grease filters?

Section 904.11.6.3

California Fire Code, CBSC, 2007 Edition page 100

5. What two electrical devices must be shut-off when a hood extinguishing system operates?

(1) Cooking appliances powered by electricity

(2) Electrical receptacles under the hood

California Fire Code, CBSC, 2007 Edition, Section 904.11.2 page 100

6. What fire code section requires that a manual fire activation device (pull station) be provided at a hood extinguishing system?

Section 904.11.1

California Fire Code, CBSC, 2007 Edition, Section 904 page 100

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

7. A record of hood and duct cleaning shall be available at restaurants for fire department inspection. Name three items that must be included on this record.

(1) ***Extent of cleaning***

(2) ***Time of cleaning***

(3) ***Date of cleaning***

California Fire Code, CBSC, 2007 Edition, Section 904.11.6.3 page 100

Inspection Of Fire Protection Systems And Special Hazards

Summary:

Terminology is important when you are reading, interpreting, and enforcing the fire code. An inspector can use Chapter 2 and 9 of the CFC to help define the terminology associated with detection and alarm systems.

Evaluation:

The student will complete the activity and a formative test at a time determined by the instructor.

Assignment:

Review your notes and read the California Fire Code, CBSC, 2007 Edition, Chapters 2 and 9, Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Chapter 8, and Fire Prevention 1B Student Supplement, SFT, 2009 Edition, Pages 73-75 in order to prepare yourself for the upcoming test. Study for our next session.

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

GROUP ACTIVITY 6-1-1: TERMINOLOGY CROSSWORD

Time Frame: 0:30

Materials Needed:

- California Fire Code, CBSC, 2007 Edition, Chapters 2 and 9
- Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Chapter 8
- Pen or pencil

Introduction:

This activity provides the students the opportunity to become familiar with the terms relating to detection and alarm systems.

Directions:

1. Divide the students into six groups.
2. Complete the crossword puzzle using the clues.
3. All possible answers to the clues are listed below the puzzle.
4. You have 20 minutes to complete this activity.
5. Be prepared to discuss your answers with the class.

CLUES ACROSS

4. Signaling of information that a fire condition exists
5. Equipment that has passed tests by a technical organization
8. A fire alarm system that detects a fire and alerts the occupants
11. Smoke detector effective for smoldering fires
12. The "brains" of the alarm system (abbreviation)
14. A system that sends an alarm to a private fire brigade
15. A defined area for identifying alarm-initiating locations
16. Detectors that measure the oxygen content of a room
17. This device is equipment that produces an approved alarm signal
19. Fire alarm control panel (abbreviation)
20. Smoke detector effective for flaming fires
22. Any change, addition, or modification in construction or occupancy

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

23. A visual review of equipment and systems
27. Occurs twice a year
28. An operating mode that alerts employees only
30. This system can only be heard by the building occupants
31. The introduction of a stimulus to an initiating device

CLUES DOWN

1. A test performed after the installation of new equipment
2. Occurs four times a year
3. The outside of a building
4. An opening through two or more floor levels with a ceiling
6. An operating mode that alerts all occupants
7. Detectors that are the slowest to respond
9. This device sends information to the alarm control unit
10. A part of a fire alarm system
13. Equipment that indicates the zone of alarm
17. A detector designed to protect people when they are sleeping
18. "Bought" with detection and alarm systems
19. This detector comes in both the IR and UV varieties
21. Occurs once a year
24. A combination of compatible interconnected alarm devices
25. The action required to initiate an alarm from a fire alarm box
26. A common visual signaling device
29. A common audible signaling device

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

Topic: 6-2: Fire Alarm System Components

Time Frame: 1:00

Level Of Instruction: Level II

Authority: 1998 NFPA 1031: Section 3-3.6

Behavioral Objective:

Condition: Given a formative test

Behavior: The student will confirm a knowledge of fire alarm system components

Standard: With a minimum 80% accuracy according to the information contained in Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Chapter 8 and Fire Prevention 1B Student Supplement, SFT, 2009 Edition, Pages 76-84

Materials Needed:

- Conference board/pads with markers/erasers
- Appropriate audiovisual training aids and devices

References:

- Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Chapter 8
- Fire Protection Handbook, NFPA, Eighteenth Edition, Section 5, Chapter 1-4
- NFPA 72: National Fire Alarm Code, NFPA, 2002 Edition

Preparation:

Each instructor must develop a motivational statement on why the student should learn the upcoming material. The purpose is to establish relevancy of the lesson to the audience. The ACID BASE acronym can be used to help develop student motivation.

A ttention (attract)	B egin
C uriosity (arouse)	A ssociation
I nterest (create)	S tudents
D esire (stimulate)	E xperience

Cite examples or use related illustrations of near-miss incidents, injuries, or fatalities. Write this section "from the heart." Be creative! Have fun with it or be serious, but remember the goal is to stimulate student motivation.

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

Summary:

Fire alarm systems are comprised of extremely complex electronic components. If an inspector understands how these components are interconnected and the minimum requirements for each, he or she can evaluate the systems installed in your jurisdiction. As an example, all systems must have, at a minimum, an initiating device, FACP, and notification device.

Evaluation:

The student will complete the formative test at a time determined by the instructor.

Assignment:

Review your notes and read Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Chapter 8 and Fire Prevention 1B Student Supplement, SFT, 2009 Edition, Pages 76-84 in order to prepare yourself for the upcoming test. Study for our next session.

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

Summary:

There are five basic types of alarm signaling systems commonly in use today: local, proprietary, central station, remote station, and auxiliary. Each system has unique characteristics. When these systems are installed, each inspector must verify that the correct system is being used. Then, ongoing inspections must ensure that the appropriate system continues to be used.

Evaluation:

The student will complete the formative test at a time determined by the instructor.

Assignment:

Review your notes and read in your Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Chapter 8 in order to prepare yourself for the upcoming test. Study for our next session.

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

Summary:

Properly inspecting a fire alarm system helps ensure its readiness if an emergency strikes. System testing and ongoing maintenance is the responsibility of the building owner. Without inspections, this process will not likely continue and false alarms will increase.

Evaluation:

The student will complete the formative test at a time determined by the instructor.

Assignment:

Review your notes and read Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Chapter 8 in order to prepare yourself for the upcoming test. Study for our next session.

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

Topic: 6-5: CFC Requirements For Fire Alarm Systems

Time Frame: 0:15

Level Of Instruction: Level II

Authority: 1998 NFPA 1031: Section 3-3.6

Behavioral Objective:

- Condition:** Given a formative test
- Behavior:** The student will confirm a knowledge of the CFC requirements for fire alarm systems
- Standard:** With a minimum 80% accuracy according to the information contained in the California Fire Code, CBSC, 2007 Edition, Chapter 9

Materials Needed:

- Conference board/pads with markers/erasers
- Appropriate audiovisual training aids and devices

References:

- Barclays Official California Code of Regulations Title 19, West Group, Chapter 4
- California Fire Code, CBSC, 2007 Edition, Chapter 9

Preparation: Each instructor must develop a motivational statement on why the student should learn the upcoming material. The purpose is to establish relevancy of the lesson to the audience. The ACID BASE acronym can be used to help develop student motivation.

A ttention (attract)	B egin
C uriosity (arouse)	A ssociation
I nterest (create)	S tudents
D esire (stimulate)	E xperience

Cite examples or use related illustrations of near-miss incidents, injuries, or fatalities. Write this section "from the heart." Be creative! Have fun with it or be serious, but remember the goal is to stimulate student motivation.

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

Summary:

During an inspection of a fire alarm system, you will primarily be using Chapter 9 Section 907 to cite violations. Requirements specific to alarm systems will be found in CFC Section 907.

Evaluation:

The student will complete the formative test at a time determined by the instructor.

Assignment:

Review your notes and read the California Fire Code, CBSC, 2007 Edition, Sections 901 through 909 in order to prepare yourself for the upcoming test. Study for our next session.

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

Summary:

Knowledge of the technical terms related to water-based fire protection systems is required for the inspector to effectively evaluate a system's capabilities and to determine if all system components are installed in accordance with regulations and manufacturer's specifications.

Evaluation:

The student will complete the formative test at a time determined by the instructor.

Assignment:

Review your notes and read the California Fire Code, CBSC, 2007 Edition, Chapter 9 and Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Chapter 7 in order to prepare yourself for the upcoming test. Study for our next session.

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

Summary:

An inspector must be able to determine the adequacy of private water supply systems. Knowing how and why these systems fail, and the need for fire protection water will assist you in ensuring that protection systems work as designed.

Evaluation:

The student will complete the formative test at a time determined by the instructor.

Assignment:

Review your notes and read Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Chapter 7 in order to prepare you for the upcoming test. Study for our next session.

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

Topic: 7-3: Sprinkler System Benefits, Limitations, And Design

Time Frame: 0:30

Level Of Instruction: Level II

Authority: 1998 NFPA 1031 5.3.4

Behavioral Objective:

Condition: Given an activity and formative test

Behavior: The student will confirm a knowledge of a sprinkler system's benefits, limitations, and design

Standard: With a minimum 80% accuracy according to the information contained in Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Chapter 7 and Fire Prevention 1B Student Supplement, SFT, 2009 Edition, Pages 90-92

Materials Needed:

- Conference board/pads with markers/erasers
- Appropriate audiovisual training aids and devices
- Individual Activity 7-3-1: Unit 7 Homework

References:

- Designs of Water-Based Fire Protection Systems, Robert M. Gagnon, 1997 Edition, Chapter 5
- Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Chapter 7

Design standardization <ul style="list-style-type: none"> 1. Establishes minimum criteria for life and safety protection 2. Maintains a minimum level of sprinkler system performance 3. Maintains single baseline reference and use of latest technologies 	<p>What are these occupancy hazard groups used for?</p>

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

Summary:

From a life safety standpoint, economic, and business standpoint, fire sprinklers are extremely effective. However, like any mechanical system, they have their shortcomings, which can reduce their effectiveness. These factors must be known for the inspector to make an appropriate inspection.

Evaluation:

The student will complete the activity and formative test at a time determined by the instructor.

Assignment:

Review your notes and read Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Chapter 7 and Fire Prevention 1B Student Supplement, SFT, 2009 Edition, Pages 90-92 in order to prepare you for the upcoming test. Study for our next session.

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

INDIVIDUAL ACTIVITY 7-3-1: UNIT 7 HOMEWORK

Time Frame:	Homework
Materials Needed:	<ul style="list-style-type: none">• <u>California Fire Code</u>, CBSC, 2007 Edition, Chapter 9• <u>Fire Inspection and Code Enforcement</u>, IFSTA, Sixth Edition, Chapter 7• Pen or pencil
Introduction:	This activity provides the students the opportunity to become familiar with water-based fire protection systems.
Directions:	<ol style="list-style-type: none">1. Using your textbooks, answer the following questions.2. Be prepared to discuss your answers with the class.

FIRE PREVENTION 1B (BRIDGE)
 Inspection Of Fire Protection Systems And Special Hazards

1. According to the CFC, when must a fire sprinkler system be electronically monitored?

Any time, unless it meets the exceptions

California Fire Code, CBSC, 2007 Section 903.4

2. All control valves on fire protection equipment must be which type of valve?

Indicating

Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Page 163

3. List three things that must be checked when inspecting OS&Y valves.

(1) Damage

(2) Fully open

(3) Accessible

*Additional Answer(s): Secured and/or supervised, stem is clean, operating wheel backed off ¼ turn
 Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Pages 170-171*

4. How may a sprinkler in an area subjected to corrosive vapors be protected?

Special protective coating

Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Page 167

5. List two things an inspector should do before inspecting a fire sprinkler system.

(1) Review records

(2) Obtain permission

*Additional Answer(s): Wear appropriate clothing, schedule building rep to perform the actual test
 Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Page 166*

6. How can a sprinkler head be protected from mechanical damage?

Use a guard or cage

Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Page 166

7. List three changes that may occur during the life of a building that would require the replacement of sprinkler heads with those of a different type or rating.

(1) Occupancy

(2) Fire hazards

(3) Wall placement

*Additional Answer(s): Partitions, HVAC equipment, lighting fixtures, mechanical equipment
 Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Pages 166-169*

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

8. What should happen to sprinkler heads that are corroded, painted, or loaded with foreign material?

Replaced

Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Page 167

9. List three common reasons that fire sprinkler systems fail.

(1) **Improper maintenance**

(2) **Water supply shut-off**

(3) **Incorrect design**

*Additional Answer(s): Inadequate water supply, obstructions, partial protection
Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Page 169*

10. What is the minimum number of spare sprinkler heads that should be kept on site at any time?

Six

Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Page 167

11. List two things that should be checked when inspecting sprinkler piping and hangars.

(1) **Corrosion**

(2) **Damage**

*Additional Answer(s): Piping not being used as support, proper support, loose hangers
Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Page 168*

12. According to the CFC, what is the minimum clearance (measured from the deflector) that must be maintained under sprinkler heads?

18 inches

California Fire Code, CBSC, 2007 Edition, Section 315.2.1

13. List three common objects that may block water distribution in a sprinkler system.

(1) **Partitions**

(2) **Stock**

(3) **Lights**

*Additional Answer(s): Hanging displays
Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Page 167*

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

Summary:

There are five types of sprinkler systems in use today - wet-pipe, dry-pipe, preaction, deluge, and those used in dwellings. Using this knowledge of sprinkler system types, the inspector can understand the differences between the systems and ensure that the appropriate system has been installed in an occupancy.

Evaluation:

The student will complete the activity and formative test at a time determined by the instructor.

Assignment:

Review your notes and read Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Chapter 7 and Fire Prevention 1B Student Supplement, SFT, 2009 Edition, Page 93 in order to prepare you for the upcoming test. Study for our next session.

FIRE PREVENTION 1B (BRIDGE)
 Inspection Of Fire Protection Systems And Special Hazards

INDIVIDUAL ACTIVITY 7-4-1: FIRE SPRINKLER SYSTEMS

Time Frame: 0:15

Materials Needed: • Pen or pencil

Introduction: This activity provides the students the opportunity to become familiar with the different types of fire sprinkler systems.

Directions:

1. Using the information in your notes, answer the following questions.
2. You have 5 minutes to complete this activity.
3. Be prepared to discuss your answers with the class.

1. What are the four basic types of sprinkler systems?

(1) **Wet-pipe**

(3) **Dry-pipe**

(2) **Praction**

(4) **Deluge**

Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Page 162

2. What is the most reliable type of sprinkler system?

Wet-pipe

Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Page 169

3. Which sprinkler system has air under pressure in its piping system?

Dry-pipe

Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Page 162

4. Which sprinkler system uses open sprinklers?

Deluge

Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Pages 162-163

5. Which sprinkler system is designed for life safety, not extinguishment?

Dwelling (NFPA 13D)

Fire Inspection and Code Enforcement, IFSTA, Sixth Edition

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

Summary:

Automatic fire sprinkler systems are supplied through a valve from public mains or private water resources. Fire department connections may be used to supplement these supplies. Major components such as the riser, cross mains and branch lines distribute water to the sprinkler heads. Sprinkler heads are color coded to indicate activation temperatures. Several types are available including upright, pendent, sidewall, residential, and special purpose. Some systems have supplemental components such as exhausters, accelerators, and supply fire pumps.

Evaluation:

The student will complete the activity and formative test at a time determined by the instructor.

Assignment:

Review your notes and read Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Chapter 7 and Fire Prevention 1B Student Supplement, SFT, 2009 Edition, Pages 94-95 in order to prepare yourself for the upcoming test. Study for our next session.

Inspection Of Fire Protection Systems And Special Hazards

INDIVIDUAL ACTIVITY 7-5-1: SPRINKLER SYSTEM COMPONENTS

Time Frame:	0:20
Materials Needed:	<ul style="list-style-type: none">• <u>Fire Inspection and Code Enforcement</u>, IFSTA, Sixth Edition, Chapter 7• Pen or pencil
Introduction:	This activity provides the students the opportunity to become familiar with the different types of sprinkler systems components.
Directions:	<ol style="list-style-type: none">1. Using the information in Chapter 7 and your notes, answer the following questions.2. You have 10 minutes to complete this activity.3. Be prepared to discuss your answers with the class.

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

1. What are the three most common types of sprinkler heads?

(1) **Upright**

(2) **Pendent**

(3) **Sidewall or flush mount**

Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Page 160

2. What determines the temperature rating for a sprinkler head?

Installation location

Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Page 160

3. What are three commonly used release mechanisms used with sprinklers?

(1) **Fusible links**

(2) **Glass bulbs**

(3) **Chemical pellets**

Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Page 161

4. What is the temperature rating of an ordinary sprinkler head and what color code is used on the frame arms to identify this rating?

(1) **135°-170°F**

(2) **Uncolored**

Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Page 162

5. Match the following acronyms to their appropriate description.

Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Page 163

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

Summary:

It is important that the inspector thoroughly inspect each sprinkler system to ensure that all valves, heads, and pipes are in good working condition and therefore, will work properly under a fire situation. Although these tests seem tedious, they are necessary to ensure that systems will operate as designed. Without this knowledge, an inspector cannot evaluate the readiness of a system. The inspector may only observe maintenance personnel conducting these tests; however, tests must be witnessed if they are to be conducted as required.

Evaluation:

The student will complete the formative test at a time determined by the instructor.

Assignment:

Review your notes and read Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Chapter 7 in order to prepare yourself for the upcoming test. Study for our next session.

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

Summary:

There are two tests needed for dry-pipe systems. The main drain test ensures that the supply line is not obstructed and the valve is open. The trip test exams the full system for its ability to function under a simulated fire.

Evaluation:

The student will complete the formative test at a time determined by the instructor.

Assignment:

Review your notes and read Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Chapter 7 in order to prepare yourself for the upcoming test. Study for our next session.

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

Topic: 7-9: Characteristics Of Standpipe Systems

Time Frame: 1:00

Level Of Instruction: Level II

Authority: 1998 NFPA 1031: Section 3-3.5

Behavioral Objective:

Condition: Given an activity and formative test

Behavior: The student will confirm a knowledge of the characteristics of standpipe systems

Standard: With a minimum 80% accuracy according to the information contained in Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Chapter 7 and Fire Prevention 1B Student Supplement, SFT, 2009 Edition, Pages 99-100

Materials Needed:

- Conference board/pads with markers/erasers
- Appropriate audiovisual training aids and devices
- Individual Activity 7-9-1: Standpipe Required Systems

References:

- California Fire Code, CBSC, 2007 Edition, Section 905
- Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Chapter 7
- NFPA 14: Standard on the Installation of Standpipe, Private Hydrant, and Hose Systems, NFPA, 2003 Edition
- Private Fire Protection and Detection, IFSTA, Second Edition, Chapter 2

Preparation:

Each instructor must develop a motivational statement on why the student should learn the upcoming material. The purpose is to establish relevancy of the lesson to the audience. The ACID BASE acronym can be used to help develop student motivation.

A ttention (attract)	B egin
C uriosity (arouse)	A ssociation
I nterest (create)	S tudents
D esire (stimulate)	E xperience

Cite examples or use related illustrations of near-miss incidents, injuries, or fatalities. Write this section "from the heart." Be creative! Have fun with it or be serious, but remember the goal is to stimulate student motivation.

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

Summary:

The three classes of standpipe systems in use today form an important part of most buildings' fire protection. Likewise, outside hose systems are important to properties where they are needed.

Evaluation:

The student will complete the activity and formative test at a time determined by the instructor.

Assignment:

Review your notes and read Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Chapter 7 and Fire Prevention 1B Student Supplement, SFT, 2009 Edition, Pages 99-100 in order to prepare yourself for the upcoming test. Study for our next session.

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

INDIVIDUAL ACTIVITY 7-9-1: STANDPIPE REQUIRED SYSTEMS

Time Frame: 0:20

Materials Needed:

- California Fire Code, CBSC, 2007 Edition, Section 905.3
- Pen or pencil

Introduction: This activity provides the students the opportunity to become familiar with the standpipe requirements.

Directions:

1. Using CFC Table 1004-A, answer the following questions.
2. You have 10 minutes to complete this activity.
3. Be prepared to discuss your answers with the class.

RETIRED CURRICULUM

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

1. What is the required class of standpipe in a fire-sprinklered Group A Occupancy that has an occupant load of 1250?

Class I

California Fire Code, CBSC, 2007 Edition, Section 905.3.2

2. What class of standpipe is required in a fire-sprinklered high-rise building? Is there a hose requirement?

Class I / No hose requirement

California Fire Code, CBSC, 2007 Edition, Section 905.3.1 Exception 1

3. In fire-sprinklered buildings that require standpipes, can they be combined with the automatic fire sprinkler system?

Yes

California Fire Code, CBSC, 2007 Edition, Section 905.3

4. What class of standpipe may be substituted in an open parking garage over 30 feet tall that is located in an area subject to freezing?

Class I, Manual Dry standpipe

California Fire Code, CBSC, 2007 Edition, Section 905.3.1 Exception 3

5. Are standpipes required in an open air seating space without enclosed spaces?

No

California Fire Code, CBSC, 2007 edition, section 905.3.2 Exception 1

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

Summary:

By conducting inspections on a regular basis, and following the checkpoints as given in this lesson, you can save time and energy, and possible lives. Remember, all the components need to be checked: fire department connections (FDC), hose outlets, piping, hose, nozzles, rack or reel, and cabinets.

Evaluation:

The student will complete the formative test at a time determined by the instructor.

Assignment:

Review your notes and read Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Chapter 7 in order to prepare yourself for the upcoming test. Study for our next session.

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

Appendix A: Formative Test #1 Answer Key

Each answer space is worth five points. Some questions may have more than one correct answer. You may use the California Fire Code while taking this test. You have 30 minutes to complete the entire test.

INSTRUCTIONS: This is a short answer test. For each of the following questions or statements, enter the correct answer(s) in the space(s) provided.

EXAMPLE: What organization developed the Incident Command System?

The fire service

	Flash Point	Boiling Point	Autoignition Temperature	Specific Gravity	Vapor Density	Lower Explosive Limit	Upper Explosive Limit
Butyl alcohol	99°F	244°F	649°F	.81	2.6	1.4	11.2
Xylene	79°F	282-286°F	932°F	.87	3.7	1.9	12.3
Acetone	-4°F	133°F	869°F	.79	2.0	2.5	12.8
Diborane	N/A	-135.1°F	100-125°F	.341	1.2475	0.8	98
Hydrogen	N/A	-423°F	932°F	N/A	0.082	4	75

Use the information above when answering questions 1-7.

1. Name one material in the chart that may be classified as a Class I-C flammable liquid.

Butyl alcohol or xylene

Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Pages 322-324
California Fire Code, CBSC, 2007 Edition, Section 3402.1

2. Name one material in the chart that may be classified as a Class I-B flammable liquid.

Acetone

Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Pages 322-324
California Fire Code, CBSC, 2007 Edition, Section 3402.1

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

3. Name one material in the chart that may be classified as a Class I-A flammable liquid.

None

Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Pages 322-324
California Fire Code, CBSC, 2007 Edition, Section 3402.1

4. Which material in the chart presents the greatest potential for explosion?

Diborane

Note: Refers to flammable range

Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Pages 322-324

5. Name one material in the chart that will float on water.

Butyl alcohol, xylene, acetone, or diborane

Note: Refers to specific gravity

Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Pages 322-324

6. Name one material in the chart that will produce vapors capable of being ignited at ambient temperatures below 80°F.

Acetone, butyl alcohol, or xylene

Note: Refers to flash point

Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Pages 322-324

7. Which one material in the chart that has a vapor density that is lighter than air?

Hydrogen

Note: Refers to vapor density

Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Pages 322-324

8. How many gallons of acetone can be stored in 55-gallon drums outside of a Group F-1 Occupancy (per pile)?

Up to 2,200

Note: Refers to Class I-B liquid

California Fire Code, CBSC, 2007 Edition, Table 3404.2 Table 3404.4.2

9. In a Group F-1 Occupancy with an approved automatic fire sprinkler system, how many gallons of xylene and butyl alcohol can be stored indoors?

Up to 240

Note: Refers to Class I-C liquids; apply Footnote "d" in Table 2703.1.1(1)

California Fire Code, CBSC, 2007 Edition, Table 2703.1.1(1)

10. In a Group F-1 Occupancy with an approved automatic fire sprinkler system, how many gallons of xylene and butyl alcohol is allowed for indoor open use?

60

Note: Refers to Class I-C liquids; apply Footnote "d" in Table 2703.1.1(1)

California Fire Code, CBSC, 2007 Edition, Table 2703.1.1(1)

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

11. What color is used by NFPA 704 to designate a Class I-B flammable liquid?

Red

Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Page 319

12. What is the maximum allowable size of an approved safety can when used for the storage of flammable liquids?

5 gallons

Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Page 333

13. What is the maximum allowable size of a flammable/ combustible liquid container when used for the storage of flammable liquids?

60 gallons

Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Page 333

14. What is the maximum allowable size of a portable tank when used for the storage of flammable liquids?

660 gallons

Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Page 333

15. What is the maximum allowable size of a metal drum when used for the storage of flammable liquids?

60 gallons

Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Page 333

16. What is the maximum allowable size of a glass container when used for the storage of flammable liquids?

1 gallon

Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Page 333

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

17. According to IFSTA, fire prevention measures for flammable and combustible liquids are based on five basic techniques or principles. List four of the five.

(1) *Eliminating or excluding sources of ignition*

(2) *Excluding air (or oxygen)*

(3) *Storing liquids in closed containers or systems*

(4) *Ventilating to prevent the accumulation of vapors within the flammable range*

Additional answer(s): Maintaining an atmosphere of inert gas instead of air

Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Page 324

Inspection Of Fire Protection Systems And Special Hazards

Appendix A: Formative Test #2 Answer Key

Each answer space is worth five points. Some questions may have more than one correct answer. You may use the California Fire Code while taking this test. You have 30 minutes to complete the entire test.

INSTRUCTIONS: Section I is a short answer test. For each of the following questions or statements, enter the correct answer(s) in the space(s) provided.

EXAMPLE: What organization developed the Incident Command System?

The fire service

SECTION I

Use the attached MSDS pages to answer questions 1-5.

1. List the classification of acetone.

Flammable liquid

2. What is the flash point?

-4°F

3. What is the boiling point?

133°F

4. List four conditions to avoid when storing acetone.

(1) ***Heat***

(2) ***Flames***

(3) ***Ignition sources***

(4) ***Incompatibles***

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

5. List three materials acetone will react with.

(1) **Concentrated nitric acid**

(2) **Sulfuric acid**

(3) **Oxidizing materials**

Additional Answer(s): Chloroform, Alkalis, Chlorine compounds, Acids, or Potassium T-Butoxide

6. According to the CFC, which four of the following require secondary containment when stored outside?

- Class 4 oxidizer (solid)
- Corrosive (liquid)
- Class II organic peroxide (liquid)
- Class 2 water reactive (solid)
- Class 3 unstable (liquid)
- Pyrophoric (liquid)

(1) **Corrosive**

(2) **Class 2 water reactive**

(3) **Class 3 unstable**

(4) **Pyrophoric**

California Fire Code, CBSC, 2007 Edition, Table 2704.2.2

7. According to the CFC, when evaluating the degree of hazard present depends upon many variables that should be considered individually and in combination. What are three of these variables?

(1) **Chemical properties of the material**

(2) **Physical properties of the material**

(3) **The amount and concentration of the material**

Additional Answer(s): Actual use, activity, or process involving the material or surrounding conditions

California Fire Code, CBSC, 2007 Edition, Appendix E, Section E103.1

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

8. The CFC identifies questions that can be asked to help an inspector evaluate a hazardous material. Write three of these questions.

(1) ***What is the material?***

(2) ***What are the concentration and strength?***

(3) ***What is the physical form of the material?***

Additional Answer(s): How much material is present?

What other materials are close enough to interact with the material?

What are the likely reactions?

What is the activity involving material?

How does the activity affect the hazardous characteristics of the material?

What must the material be protected from?

What effects of the material must people and the environment be protected from?

How can protection be accomplished?

California Fire Code, CBSC, 2007 Edition, Appendix E, Section E103.2

6

California Fire Code, CBSC, 2007 Edition, Sections 2703.11.3.2 and 2703.11.3.2

10. Incompatible materials in storage and storage of materials incompatible with materials in use shall be separated when the stored materials are in containers having a capacity of more than _____ pound(s) or _____ gallon(s).

5

1/2

California Fire Code, CBSC, 2007 Edition, Section 2703.9.8

11. Separation of incompatible materials may be accomplished by segregating incompatible materials storage by a distance of not less than _____ feet.

20

California Fire Code, CBSC, 2007 Edition, Section 2703.9.8

12. Separation of incompatible materials may be accomplished by isolating them with a noncombustible partition extending not less than _____ above and to the sides of the stored materials.

18 inches

California Fire Code, CBSC, 2007 Edition, Section 2703.9.8

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

13. Separation of incompatible materials may be accomplished by storing liquid and solid materials in _____.

hazardous materials storage cabinets

California Fire Code, CBSC, 2007 Edition, Section 2703.9.8

14. Separation of incompatible materials may be accomplished by storing compressed gases in _____.

gas cabinets or exhausted enclosures

California Fire Code, CBSC, 2007 Edition, Section 2703.9.8

15. Compressed Gas Materials that are _____ shall not be stored within the same cabinet or enclosure.

incompatible

California Fire Code, CBSC, 2007 Edition, Section 2703.9.8

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

ACETONE - MSDS NUMBER: A0446 --- EFFECTIVE DATE: 04/10/01

1. PRODUCT IDENTIFICATION

Synonyms: Dimethylketone; 2-propanone; dimethylketal
CAS No.: 67-64-1
Molecular Weight: 58.08
Chemical Formula: (CH₃)₂CO

Product Codes:

J.T. Baker: 5356, 5580, 5805, 9001, 9002, 9003, 9004, 9005, 9006, 9007, 9008, 9009, 9010, 9015, 9036, 9125, 9254, 9271, A134, V655
Mallinckrodt: 0018, 2432, 2435, 2437, 2438, 2440, 2443, 2445, 2850, H451, H580, H981

2. COMPOSITION/INFORMATION ON INGREDIENTS

Component	CAS Registry Number	Molar (volume) concentration	Hazardous
Acetone	67-64-1	99% - 100%	Yes

3. HAZARDS IDENTIFICATION

Emergency Overview

DANGER! EXTREMELY FLAMMABLE LIQUID AND VAPOR. VAPOR MAY CAUSE FLASH FIRE. HARMFUL IF SWALLOWED OR INHALED. CAUSES IRRITATION TO SKIN, EYES AND RESPIRATORY TRACT. AFFECTS CENTRAL NERVOUS SYSTEM.

J.T. Baker SAF-T-DATA(tm) Ratings (Provided here for your convenience)

Health Rating: 1 – Slight
Flammability Rating: 4 - Extreme (Flammable)
Reactivity Rating: 2 – Moderate
Contact Rating: 1 – Slight
Lab Protective Equip: GOGGLES; LAB COAT; VENT HOOD; PROPER GLOVES; CLASS B EXTINGUISHER
Storage Color Code: Red (Flammable)

Potential Health Effects

Inhalation: Inhalation of vapors irritates the respiratory tract. May cause coughing, dizziness, dullness, and headache. Higher concentrations can produce central nervous system depression, narcosis, and unconsciousness.

Ingestion: Swallowing small amounts is not likely to produce harmful effects. Ingestion of larger amounts may produce abdominal pain, nausea and vomiting. Aspiration into lungs can produce severe lung damage and is a medical emergency. Other symptoms are expected to parallel inhalation.

Skin Contact: Irritating due to defatting action on skin. Causes redness, pain, drying and cracking of the skin.

Eye Contact: Vapors are irritating to the eyes. Splashes may cause severe irritation, with stinging, tearing, redness and pain.

Chronic Exposure: Prolonged or repeated skin contact may produce severe irritation or dermatitis.

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

Aggravation of Pre-existing Conditions: Use of alcoholic beverages enhances toxic effects. Exposure may increase the toxic potential of chlorinated hydrocarbons, such as chloroform, trichloroethane.

4. FIRST AID MEASURES

Inhalation: Remove to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Get medical attention.

Ingestion: Aspiration hazard. If swallowed, vomiting may occur spontaneously, but DO NOT INDUCE. If vomiting occurs, keep head below hips to prevent aspiration into lungs. Never give anything by mouth to an unconscious person. Call a physician immediately.

Skin Contact: Immediately flush skin with plenty of water for at least 15 minutes. Remove contaminated clothing and shoes. Get medical attention. Wash clothing before reuse. Thoroughly clean shoes before reuse.

Eye Contact: Immediately flush eyes with plenty of water for at least 15 minutes, lifting upper and lower eyelids occasionally. Get medical attention.

5. FIRE FIGHTING MEASURES

Fire: Flash point: -20C (-4F) CC
Autoignition temperature: 465C (869F)

Flammable limits in air % by volume: lel: 2.5; uel: 12.8
Extremely Flammable Liquid and Vapor! Vapor may cause flash fire.

Explosion: Above flash point, vapor-air mixtures are explosive within flammable limits noted above. Vapors can flow along surfaces to distant ignition source and flash back. Contact with strong oxidizers may cause fire. Sealed containers may rupture when heated. This material may produce a floating fire hazard. Sensitive to static discharge.

Fire Extinguishing Media: Dry chemical, alcohol foam or carbon dioxide. Water may be ineffective. Water spray may be used to keep fire exposed containers cool, dilute spills to nonflammable mixtures, protect personnel attempting to stop leak and disperse vapors.

Special Information: In the event of a fire, wear full protective clothing and NIOSH-approved self-contained breathing apparatus with full facepiece operated in the pressure demand or other positive pressure mode.

6. ACCIDENTAL RELEASE MEASURES

Ventilate area of leak or spill. Remove all sources of ignition. Wear appropriate personal protective equipment as specified in Section 8. Isolate hazard area. Keep unnecessary and unprotected personnel from entering. Contain and recover liquid when possible. Use non-sparking tools and equipment. Collect liquid in an appropriate container or absorb with an inert material (e. g., vermiculite, dry sand, earth), and place in a chemical waste container. Do not use combustible materials, such as saw dust. Do not flush to sewer! If a leak or spill has not ignited, use water spray to disperse the vapors, to protect personnel attempting to stop leak, and to flush spills away from exposures. US Regulations (CERCLA) require reporting spills and releases to soil, water and air in excess of reportable quantities. The toll free number for the US Coast Guard National Response Center is (800) 424-8802.

J. T. Baker SOLUSORB(R) solvent adsorbent is recommended for spills of this product.

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

7. HANDLING AND STORAGE

Protect against physical damage. Store in a cool, dry well-ventilated location, away from any area where the fire hazard may be acute. Outside or detached storage is preferred. Separate from incompatibles. Containers should be bonded and grounded for transfers to avoid static sparks. Storage and use areas should be No Smoking areas. Use non-sparking type tools and equipment, including explosion proof ventilation. Containers of this material may be hazardous when empty since they retain product residues (vapors, liquid); observe all warnings and precautions listed for the product.

8. EXPOSURE CONTROLS/PERSONAL PROTECTION

Airborne Exposure Limits:	Acetone
OSHA Permissible Exposure Limit (PEL):	1000 ppm (TWA)
ACGIH Threshold Limit Value (TLV):	500 ppm (TWA), 750 ppm (STEL) A4 - not classifiable as a human carcinogen

Ventilation System

A system of local and/or general exhaust is recommended to keep employee exposures below the Airborne Exposure Limits. Local exhaust ventilation is generally preferred because it can control the emissions of the contaminant at its source, preventing dispersion of it into the general work area. Please refer to the ACGIH document, *Industrial Ventilation, A Manual of Recommended Practices*, most recent edition, for details.

Personal Respirators (NIOSH Approved)

If the exposure limit is exceeded, a half-face organic vapor respirator may be worn for up to ten times the exposure limit or the maximum use concentration specified by the appropriate regulatory agency or respirator supplier, whichever is lowest. A full-face piece organic vapor respirator may be worn up to 50 times the exposure limit or the maximum use concentration specified by the appropriate regulatory agency or respirator supplier, whichever is lowest. For emergencies or instances where the exposure levels are not known, use a full-face piece positive-pressure, air-supplied respirator. WARNING: Air-purifying respirators do not protect workers in oxygen-deficient atmospheres.

Skin Protection

Wear impervious protective clothing, including boots, gloves, lab coat, apron or coveralls, as appropriate, to prevent skin contact.

Eye Protection

Use chemical safety goggles and/or a full face shield where splashing is possible. Maintain eye wash fountain and quick-drench facilities in work area.

9. PHYSICAL AND CHEMICAL PROPERTIES

Appearance:	Clear, colorless, volatile liquid.
Odor:	Fragrant, mint-like
Solubility:	Miscible in all proportions in water.
Specific Gravity:	0.79 @ 20C/4C
pH:	No information found.
% Volatiles by volume @ 21C (70F):	100
Boiling Point:	56.5C (133F) @ 760 mm Hg
Melting Point:	-95C (-139F)
Vapor Density (Air=1):	2.0
Vapor Pressure (mm Hg):	400 @ 39.5C (104F)
Evaporation Rate (BuAc=1):	ca. 7.7

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

10. STABILITY AND REACTIVITY

Stability: Stable under ordinary conditions of use and storage.
Hazardous Decomposition Products: Carbon dioxide and carbon monoxide may form when heated to decomposition.
Hazardous Polymerization: Will not occur.
Incompatibilities: Concentrated nitric and sulfuric acid mixtures, oxidizing materials, chloroform, alkalis, chlorine compounds, acids, potassium t-butoxide.
Conditions to Avoid: Heat, flames, ignition sources and incompatibles.

11. TOXICOLOGICAL INFORMATION

Oral rat LD50: 5800 mg/kg; Inhalation rat LC50: 50,100mg/m³; Irritation eye rabbit, Standard Draize, 20 mg severe; investigated as a tumorigen, mutagen, reproductive effector.

Cancer Lists

Ingredient	NTP Carcinogen		IARC Category
	Known	Anticipated	
Acetone (67-64-1)	No	No	None

12. ECOLOGICAL INFORMATION

Environmental Fate

When released into the soil, this material is expected to readily biodegrade. When released into the soil, this material is expected to leach into groundwater. When released into the soil, this material is expected to quickly evaporate. When released into water, this material is expected to readily biodegrade. When released to water, this material is expected to quickly evaporate. This material has a log octanol-water partition coefficient of less than 3.0. This material is not expected to significantly bioaccumulate. When released into the air, this material may be moderately degraded by reaction with photochemically produced hydroxyl radicals. When released into the air, this material may be moderately degraded by photolysis. When released into the air, this material is expected to be readily removed from the atmosphere by wet deposition.

Environmental Toxicity

This material is not expected to be toxic to aquatic life. The LC50/96-hour values for fish are over 100 mg/l.

13. DISPOSAL CONSIDERATIONS

Whatever cannot be saved for recovery or recycling should be handled as hazardous waste and sent to a RCRA approved incinerator or disposed in a RCRA approved waste facility. Processing, use or contamination of this product may change the waste management options. State and local disposal regulations may differ from federal disposal regulations. Dispose of container and unused contents in accordance with federal, state and local requirements.

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

Appendix A: Formative Test #3 Answer Key

Each answer space is worth five points. Some questions may have more than one correct answer. You may use the California Fire Code while taking this test. You have 30 minutes to complete the entire test.

INSTRUCTIONS: This is a short answer test. For each of the following questions or statements, enter the correct answer(s) in the space(s) provided.

EXAMPLE: What organization developed the Incident Command System?

The fire service

1. When is a hood and duct extinguishing system required in a commercial cooking operation?

When commercial cooking equipment produces grease laden vapors, and is provided with a type I hood

California Fire Code, CBSC, 2007 Edition, Section 904.11 (See also 904.2.1 and 609)

2. Where a hood and duct extinguishing system is provided for the protection of commercial cooking equipment, what is the minimum requirement by type and placement for portable fire extinguishers?

Type: **Listed and labeled for Class K (Section 904.11.5)**

Placement: **Installed within 30 feet and unobstructed path (Section 906.1)**

California Fire Code, CBSC, 2007 Edition

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

3. List three types of fire protection acceptable for use in a hood and duct extinguishing system.

(1) Wet-chemical extinguishing system complying with U.L. 300

(2) Carbon Dioxide extinguishing systems

(3) Automatic fire sprinklers

California Fire Code, CBSC, 2007 Edition, Section 904.11

4. During an inspection of an office building, you find the required fire extinguishers stored in ordinary, unmarked file cabinets. What two CFC sections prohibit this practice?

(1) Section 906.5

(2) Section 906.6

California Fire Code, CBSC, 2007 Edition

5. How often must extinguishing systems used for the protection of commercial cooking equipment be serviced?

Every 6 months or after system activation

California Fire Code, CBSC, 2007 Edition, Section 904.11.6.4 (Partially mentioned in 904.5.1)

6. How often must hoods, grease-removal devices, fans, ducts, and other appurtenances be cleaned in order to prevent the accumulation of grease?

As often as necessary

California Fire Code, CBSC, 2007 Edition, Section 904.11.6.3

7. All cleaning of hoods, grease-removal devices, fans, ducts, and other appurtenances must be recorded. Where should these records be kept and what cleaning information should the inspector look for when reviewing them?

(1) On the premises

(2) Time, date, and the extent of cleaning

California Fire Code, CBSC, 2007 Edition, Section 904.11.6.3

8. Where should manual fire alarm boxes be located?

Within 5 feet of the entry of an exit, and not more than 200 feet travel distance.

California Fire Code, CBSC, 2007 Edition, Section 907.4.1

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

9. Until the system is restored, what can replace a fire alarm system that is out of service?

Fire watch personnel

California Fire Code, CBSC, 2007 Edition, Section 901.7

10. What type of fire alarm system must be provided in a room where highly toxic compressed gases are stored?

Automatic smoke detection

California Fire Code, CBSC, 2007 Edition, Section 907.2.5

11. Which section of the CFC addresses the alarm requirements for a large nightclub having an occupant load of 375?

907.2.1

California Fire Code, CBSC, 2007 Edition

12. Which section of the CFC addresses the alarm requirements for a one-story bank building?

907.2.2

California Fire Code, CBSC, 2007 Edition

13. A voice/alarm communication system initiated by the fire alarm system is required in assembly-use occupancies when the occupant load exceeds what?

1,000+ occupant load

California Fire Code, CBSC, 2007 Edition, Section 907.2.1.1

14. Inspection, testing and maintenance of fire protection systems shall be in accordance with the standards listed in what section of the CFC?

901.6.1 and Table 901.6.1

California Fire Code, CBSC, 2007 Edition, Section 1001.5.4

15. A manual fire alarm box is required to be what color? What CFC section requires this?

Red, Section 907.4.3

California Fire Code, CBSC, 2007 Edition

16. Where should an inspector find reports of all inspections and tests performed on fire protection systems and equipment?

On the premises

California Fire Code, CBSC, 2007 Edition, Section 901.6.2

FIRE PREVENTION 1B (BRIDGE)
Inspection Of Fire Protection Systems And Special Hazards

17. List three things that must be checked when performing a periodic inspection or test on a fire alarm initiating device.

(1) **Access**

(2) **Damage**

(3) **Ease of operation**

Additional Answer(s): Alterations or Location

Fire Inspection and Code Enforcement, IFSTA, Sixth Edition, Pages 281-285

18. What are two methods for reducing nuisance alarms from residential smoke detectors?

(1) **Move it**

(2) **Vacuum it**

Additional Answer(s): Replace it

Fire Prevention 1B Student Supplement, SFT, 2008 Edition, Pages 80-81

19. List two areas of a home that should be protected with a smoke detector.

(1) **Bedroom**

(2) **Top of the stairs**

Additional Answer(s): On every level, basement, or area outside the bedroom

Fire Prevention 1B Student Supplement, SFT, 2008 Edition, Page 78

20. How often should residential smoke detectors be tested?

Monthly

Fire Prevention 1B Student Supplement, SFT, 2008 Edition, Page 80

Appendix B: Formative Test #1

Name: _____

Date: _____

Each answer space is worth five points. Some questions may have more than one correct answer. You may use the California Fire Code while taking this test. You have 30 minutes to complete the entire test.

INSTRUCTIONS: This is a short answer test. For each of the following questions or statements, enter the correct answer(s) in the space(s) provided.

EXAMPLE: What organization developed the Incident Command System?
The fire service

	Flash Point	Boiling Point	Autoignition Temperature	Specific Gravity	Vapor Density	Lower Explosive Limit	Upper Explosive Limit
Butyl alcohol	99°F	244°F	649°F	.81	2.6	1.4	11.2
Xylene	79°F	282-286°F	932°F	.87	3.7	1.9	12.3
Acetone	-4°F	133°F	869°F	.79	2.0	2.5	12.8
Diborane	N/A	-135.1°F	100-125°F	.341	1.2475	0.8	98
Hydrogen	N/A	-423°F	932°F	N/A	0.082	4	75

Use the information above when answering questions 1-7.

1. Name one material in the chart that may be classified as a Class I-C flammable liquid.

2. Name one material in the chart that may be classified as a Class I-B flammable liquid.

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

3. Name one material in the chart that may be classified as a Class I-A flammable liquid.

4. Which material in the chart presents the greatest potential for explosion?

5. Name one material in the chart that will float on water.

6. Name one material in the chart that will produce vapors capable of being ignited at ambient temperatures below 80°F.

7. Which one material in the chart that has a vapor density that is lighter than air?

8. How many gallons of acetone can be stored in 55-gallon drums outside of a Group F-1 Occupancy (per pile)?

9. In a Group F-1 Occupancy with an approved automatic fire sprinkler system, how many gallons of xylene and butyl alcohol can be stored indoors?

10. In a Group F-1 Occupancy with an approved automatic fire sprinkler system, how many gallons of xylene and butyl alcohol is allowed for indoor open use?

FIRE PREVENTION 1B (BRIDGE)
Inspection Of Fire Protection Systems And Special Hazards

11. What color is used by NFPA 704 to designate a Class I-B flammable liquid?

12. What is the maximum allowable size of an approved safety can when used for the storage of flammable liquids?

13. What is the maximum allowable size of a flammable/ combustible liquid container when used for the storage of flammable liquids?

14. What is the maximum allowable size of a portable tank when used for the storage of flammable liquids?

15. What is the maximum allowable size of a metal drum when used for the storage of flammable liquids?

16. What is the maximum allowable size of a glass container when used for the storage of flammable liquids?

RETIRED CURRICULUM

Emergency Overview

DANGER! EXTREMELY FLAMMABLE LIQUID AND VAPOR. VAPOR MAY CAUSE FLASH FIRE. HARMFUL IF SWALLOWED OR INHALED. CAUSES IRRITATION TO SKIN, EYES AND RESPIRATORY TRACT. AFFECTS CENTRAL NERVOUS SYSTEM.

J.T. Baker SAF-T-DATA(tm) Ratings (Provided here for your convenience)

Health Rating: 1 – Slight
Flammability Rating: 4 - Extreme (Flammable)
Reactivity Rating: 2 – Moderate
Contact Rating: 1 – Slight
Lab Protective Equip: GOGGLES; LAB COAT; VENT HOOD; PROPER GLOVES; CLASS B EXTINGUISHER
Storage Color Code: Red (Flammable)

Potential Health Effects

Inhalation: Inhalation of vapors irritates the respiratory tract. May cause coughing, dizziness, dullness, and headache. Higher concentrations can produce central nervous system depression, narcosis, and unconsciousness.

Ingestion: Swallowing small amounts is not likely to produce harmful effects. Ingestion of larger amounts may produce abdominal pain, nausea and vomiting. Aspiration into lungs can produce severe lung damage and is a medical emergency. Other symptoms are expected to parallel inhalation.

Skin Contact: Irritating due to defatting action on skin. Causes redness, pain, drying and cracking of the skin.

Eye Contact: Vapors are irritating to the eyes. Splashes may cause severe irritation, with stinging, tearing, redness and pain.

Chronic Exposure: Prolonged or repeated skin contact may produce severe irritation or dermatitis.

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

Aggravation of Pre-existing Conditions: Use of alcoholic beverages enhances toxic effects. Exposure may increase the toxic potential of chlorinated hydrocarbons, such as chloroform, trichloroethane.

4. FIRST AID MEASURES

Inhalation: Remove to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Get medical attention.

Ingestion: Aspiration hazard. If swallowed, vomiting may occur spontaneously, but DO NOT INDUCE. If vomiting occurs, keep head below hips to prevent aspiration into lungs. Never give anything by mouth to an unconscious person. Call a physician immediately.

Skin Contact: Immediately flush skin with plenty of water for at least 15 minutes. Remove contaminated clothing and shoes. Get medical attention. Wash clothing before reuse. Thoroughly clean shoes before reuse.

Eye Contact: Immediately flush eyes with plenty of water for at least 15 minutes, lifting upper and lower eyelids occasionally. Get medical attention.

5. FIRE FIGHTING MEASURES

Fire: Flash point: -20C (-4F) CC
Autoignition temperature: 465C (869F)

Flammable limits in air % by volume: lel: 2.5; uel: 12.8
Extremely Flammable Liquid and Vapor! Vapor may cause flash fire.

Explosion: Above flash point, vapor-air mixtures are explosive within flammable limits noted above. Vapors can flow along surfaces to distant ignition source and flash back. Contact with strong oxidizers may cause fire. Sealed containers may rupture when heated. This material may produce a floating fire hazard. Sensitive to static discharge.

Fire Extinguishing Media: Dry chemical, alcohol foam or carbon dioxide. Water may be ineffective. Water spray may be used to keep fire exposed containers cool, dilute spills to nonflammable mixtures, protect personnel attempting to stop leak and disperse vapors.

Special Information: In the event of a fire, wear full protective clothing and NIOSH-approved self-contained breathing apparatus with full facepiece operated in the pressure demand or other positive pressure mode.

6. ACCIDENTAL RELEASE MEASURES

Ventilate area of leak or spill. Remove all sources of ignition. Wear appropriate personal protective equipment as specified in Section 8. Isolate hazard area. Keep unnecessary and unprotected personnel from entering. Contain and recover liquid when possible. Use non-sparking tools and equipment. Collect liquid in an appropriate container or absorb with an inert material (e. g., vermiculite, dry sand, earth), and place in a chemical waste container. Do not use combustible materials, such as saw dust. Do not flush to sewer! If a leak or spill has not ignited, use water spray to disperse the vapors, to protect personnel attempting to stop leak, and to flush spills away from exposures. US Regulations (CERCLA) require reporting spills and releases to soil, water and air in excess of reportable quantities. The toll free number for the US Coast Guard National Response Center is (800) 424-8802.

J. T. Baker SOLUSORB(R) solvent adsorbent is recommended for spills of this product.

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

7. HANDLING AND STORAGE

Protect against physical damage. Store in a cool, dry well-ventilated location, away from any area where the fire hazard may be acute. Outside or detached storage is preferred. Separate from incompatibles. Containers should be bonded and grounded for transfers to avoid static sparks. Storage and use areas should be No Smoking areas. Use non-sparking type tools and equipment, including explosion proof ventilation. Containers of this material may be hazardous when empty since they retain product residues (vapors, liquid); observe all warnings and precautions listed for the product.

8. EXPOSURE CONTROLS/PERSONAL PROTECTION

Airborne Exposure Limits:	Acetone
OSHA Permissible Exposure Limit (PEL):	1000 ppm (TWA)
ACGIH Threshold Limit Value (TLV):	500 ppm (TWA), 750 ppm (STEL) A4 - not classifiable as a human carcinogen

Ventilation System

A system of local and/or general exhaust is recommended to keep employee exposures below the Airborne Exposure Limits. Local exhaust ventilation is generally preferred because it can control the emissions of the contaminant at its source, preventing dispersion of it into the general work area. Please refer to the ACGIH document, *Industrial Ventilation, A Manual of Recommended Practices*, most recent edition, for details.

Personal Respirators (NIOSH Approved)

If the exposure limit is exceeded, a half-face organic vapor respirator may be worn for up to ten times the exposure limit or the maximum use concentration specified by the appropriate regulatory agency or respirator supplier, whichever is lowest. A full-face piece organic vapor respirator may be worn up to 50 times the exposure limit or the maximum use concentration specified by the appropriate regulatory agency or respirator supplier, whichever is lowest. For emergencies or instances where the exposure levels are not known, use a full-face piece positive-pressure, air-supplied respirator. WARNING: Air-purifying respirators do not protect workers in oxygen-deficient atmospheres.

Skin Protection

Wear impervious protective clothing, including boots, gloves, lab coat, apron or coveralls, as appropriate, to prevent skin contact.

Eye Protection

Use chemical safety goggles and/or a full face shield where splashing is possible. Maintain eye wash fountain and quick-drench facilities in work area.

9. PHYSICAL AND CHEMICAL PROPERTIES

Appearance:	Clear, colorless, volatile liquid.
Odor:	Fragrant, mint-like
Solubility:	Miscible in all proportions in water.
Specific Gravity:	0.79 @ 20C/4C
pH:	No information found.
% Volatiles by volume @ 21C (70F):	100
Boiling Point:	56.5C (133F) @ 760 mm Hg
Melting Point:	-95C (-139F)
Vapor Density (Air=1):	2.0
Vapor Pressure (mm Hg):	400 @ 39.5C (104F)
Evaporation Rate (BuAc=1):	ca. 7.7

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

10. STABILITY AND REACTIVITY

Stability: Stable under ordinary conditions of use and storage.

Hazardous Decomposition Products: Carbon dioxide and carbon monoxide may form when heated to decomposition.

Hazardous Polymerization: Will not occur.

Incompatibilities: Concentrated nitric and sulfuric acid mixtures, oxidizing materials, chloroform, alkalis, chlorine compounds, acids, potassium t-butoxide.

Conditions to Avoid: Heat, flames, ignition sources and incompatibles.

11. TOXICOLOGICAL INFORMATION

Oral rat LD50: 5800 mg/kg; Inhalation rat LC50: 50,100mg/m³; Irritation eye rabbit, Standard Draize, 20 mg severe; investigated as a tumorigen, mutagen, reproductive effector.

Cancer Lists

Ingredient	NTP Carcinogen		IARC Category
	Known	Anticipated	
Acetone (67-64-1)	No	No	None

12. ECOLOGICAL INFORMATION

Environmental Fate

When released into the soil, this material is expected to readily biodegrade. When released into the soil, this material is expected to leach into groundwater. When released into the soil, this material is expected to quickly evaporate. When released into water, this material is expected to readily biodegrade. When released to water, this material is expected to quickly evaporate. This material has a log octanol-water partition coefficient of less than 3.0. This material is not expected to significantly bioaccumulate. When released into the air, this material may be moderately degraded by reaction with photochemically produced hydroxyl radicals. When released into the air, this material may be moderately degraded by photolysis. When released into the air, this material is expected to be readily removed from the atmosphere by wet deposition.

Environmental Toxicity

This material is not expected to be toxic to aquatic life. The LC50/96-hour values for fish are over 100 mg/l.

13. DISPOSAL CONSIDERATIONS

Whatever cannot be saved for recovery or recycling should be handled as hazardous waste and sent to a RCRA approved incinerator or disposed in a RCRA approved waste facility. Processing, use or contamination of this product may change the waste management options. State and local disposal regulations may differ from federal disposal regulations. Dispose of container and unused contents in accordance with federal, state and local requirements.

14. TRANSPORT INFORMATION

Domestic (Land, D.O.T.)

Proper Shipping Name: ACETONE
 Hazard Class: 3
 UN/NA: UN1090
 Packing Group: II
 Information reported for product/size: 350LB

16. OTHER INFORMATION

NFPA Ratings:	Health: 1 Flammability: 3 Reactivity: 0
Label Hazard Warning:	DANGER! EXTREMELY FLAMMABLE LIQUID AND VAPOR. VAPOR MAY CAUSE FLASH FIRE. HARMFUL IF SWALLOWED OR INHALED. CAUSES IRRITATION TO SKIN, EYES AND RESPIRATORY TRACT. AFFECTS CENTRAL NERVOUS SYSTEM.
Label Precautions:	Keep away from heat, sparks, and flame. Keep container closed. Use only with adequate ventilation. Wash thoroughly after handling. Avoid breathing vapor. Avoid contact with eyes, skin, and clothing.
Label First Aid:	Aspiration hazard. If swallowed, vomiting may occur spontaneously, but DO NOT INDUCE. If vomiting occurs, keep head below hips to prevent aspiration into lungs. Never give anything by mouth to an unconscious person. Call a physician immediately. If inhaled, remove to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. In case of contact, immediately flush eyes or skin with plenty of water for at least 15 minutes. Remove contaminated clothing and shoes. Wash clothing before reuse. In all cases, get medical attention.
Product Use:	Laboratory Reagent.
Revision Information:	No changes.

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

Appendix B: Formative Test #3

Name: _____

Date: _____

Each answer space is worth five points. Some questions may have more than one correct answer. You may use the California Fire Code while taking this test. You have 30 minutes to complete the entire test.

INSTRUCTIONS: This is a short answer test. For each of the following questions or statements, enter the correct answer(s) in the space(s) provided.

EXAMPLE: What organization developed the Incident Command System?

The fire service

1. When is a hood and duct extinguishing system required in a commercial cooking operation?

2. Where a hood and duct extinguishing system is provided for the protection of commercial cooking equipment, what is the minimum requirement by type and placement for portable fire extinguishers?

Type: _____

Placement: _____

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

3. List three types of fire protection acceptable for use in a hood and duct extinguishing system.

(1) _____

(2) _____

(3) _____

4. During an inspection of an office building, you find the required fire extinguishers stored in ordinary, unmarked file cabinets. What two CFC sections prohibit this practice?

(1) _____

(2) _____

5. How often must extinguishing systems used for the protection of commercial cooking equipment be serviced?

6. How often must hoods, grease-removal devices, fans, ducts, and other appurtenances be cleaned in order to prevent the accumulation of grease?

7. All cleaning of hoods, grease-removal devices, fans, ducts, and other appurtenances must be recorded. Where should these records be kept and what cleaning information should the inspector look for when reviewing them?

(1) _____

(2) _____

8. Where should manual pull stations be located?

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

9. Until the system is restored, what can replace a fire alarm system that is out of service?

10. What type of fire alarm system must be provided in a room where highly toxic compressed gases are stored?

11. Which section of the CFC addresses the alarm requirements for a large nightclub having an occupant load of 375?

12. Which section of the CFC addresses the alarm requirements for a one-story bank building?

13. A voice/alarm communication system initiated by the fire alarm system is required in assembly-use occupancies when the occupant load exceeds what?

14. Inspection, testing and maintenance of fire protection systems shall be in accordance with the standards listed in what section of the CFC?

15. A manual fire alarm box is required to be what color? What CFC section requires this?

16. Where should an inspector find reports of all inspections and tests performed on fire protection systems and equipment?

FIRE PREVENTION 1B (BRIDGE)

Inspection Of Fire Protection Systems And Special Hazards

17. List three things that must be checked when performing a periodic inspection or test on a fire alarm initiating device.

(1) _____

(2) _____

(3) _____

18. What are two methods for reducing nuisance alarms from residential smoke detectors?

(1) _____

(2) _____

19. List two areas of a home that should be protected with a smoke detector.

(1) _____

(2) _____

20. How often should residential smoke detectors be tested?

QUIZ SCORING	
Each answer space is worth five points	
Total Possible	160
80% Minimum	130
Score	
Pass or Fail?
