STATE FIRE TRAINING

COURSE INFORMATION

AND

REQUIRED MATERIALS MANUAL

January May 20195
# Table Of Contents

**COMMAND COURSES**

- Chief Fire Officer 3D: Emergency Service Delivery Responsibilities (2014) ........................................ 6
- Company Officer 2D: All-Risk Command Operations (2014) ................................................................. 8
- Company Officer 2E: Wildland Incident Operations (2014) ................................................................. 10
- Executive Chief Fire Officer 4D: Emergency Services Delivery (2014) ............................................. 12
- Incident Management of High Rise Fires (2017) ......................................................................................... 14
- Incident Management of Major Fires (2015) .............................................................................................. 15
- Incident Management of the Fire Fighter Emergency (2016) ................................................................. 17
- Command 1A: Structure Fire Command Operations for the Company Officer (2012) ................ 18
- Fire Command 1B: Incident Management for Company Officers (1998) ........................................ 20
- Command 1C: WUI Command Operations for the Company Officer (2012)................................. 22
- Fire Command 2A: Command Tactics at Major Fires (1989) ........................................................... 24
- Fire Command 2C: High-rise Fire Fighting Tactics (1995) ................................................................. 27
- Fire Command 2D: Planning for Large Scale Disasters (1996) ............................................................. 28
- Fire Command 2E: Wildland Fire Fighting Tactics (1996) ................................................................. 30

**COMMUNITY RISK REDUCTION COURSES**

- Community Risk Educator (2014) ........................................................................................................... 31
- Community Risk Officer (2014) ............................................................................................................ 33
- Community Risk Specialist (2014) ......................................................................................................... 35

**DRIVER/OPERATOR COURSES**

- Aerial Apparatus Operations (2015) ........................................................................................................ 37
- Basic Pump Operations (1993) .............................................................................................................. 40
- Fire Apparatus Driver/Operator 1A: Driver/Operator (2015) ............................................................ 42
- Tillered Apparatus Operations (2015) ..................................................................................................... 46
- Water Tender Operations (2015) ............................................................................................................ 47
- Wildland Fire Apparatus Operations (2015) ........................................................................................... 49
- Driver/Operator: Aerial/Tiller Truck Operations (2012) ..................................................................... 51

**FIRE FIGHTING/RESCUE COURSES**

- Animal Technical Rescue Awareness (2017) ......................................................................................... 63
- Animal Technical Rescue Technician (2017) ......................................................................................... 65
- Auto Extrication (1996) ....................................................................................................................... 68
- Command and Control of the RIC Deployment (2011) ..................................................................... 69
- Confined Space Rescue Awareness (1995) ............................................................................................ 70
- Confined Space Rescue Awareness (2018) ............................................................................................ 71
- Fire Control 1: Basic Fire Chemistry (1996) ......................................................................................... 74
- Fire Control 2: Basic Operations – Structural (1996) ......................................................................... 75
- Fire Control 3A: Structural Fire Fighting in Acquired Structures (2009) ........................................ 76
- Fire Control 3B: Structural Fire Fighting in Live-fire Simulators (2009) ............................................ 77
- Fire Control 4: Controlling Ignitable Liquids and Gases (2015) ....................................................... 78
Fire Control 4A: Flammable Gases Fire Fighting (1996) ................................................................. 81
Fire Control 4B: Flammable Liquids Fire Fighting (1996) ............................................................... 82
Fire Control 4A and 4B: Flammable Gases and Liquids Fire Fighting (1996) ................................. 83
Fire Control 5: Aircraft Rescue and Fire Fighting (1988) ................................................................. 84
Fire Control 6: Wildland Fire Fighting Essentials (1992) ............................................................... 86
Fire Control 7: Wildland Fire Fighting ................................................................................................. 87
Fire Fighter I (2013) .................................................................................................................................. 88
Fire Fighter I (2001) .................................................................................................................................. 91
Fire Fighter II (2013) ............................................................................................................................... 92
Fire Fighter II (2001) .................................................................................................................................. 94
Fire Fighter Survival (2010) .................................................................................................................. 95
Incident Safety Awareness for Hired Vendors (2018) ........................................................................... 99
Motion Picture/Television – Fire Safety Officer (2012) ........................................................................ 105
Open Water Rescuer – Basic (2014) ..................................................................................................... 107
River and Flood Water Rescue (1996) .................................................................................................. 124
Trench Rescue ........................................................................................................................................ 126
Vehicle Extrication (2015) .................................................................................................................... 127
Hazardous Materials First Responder Awareness Level (2007) .......................................................... 128
Hazardous Materials First Responder Operational Level (2007) ......................................................... 130
Hazardous Materials First Responder Operational Level, Decontamination (2007) ....................... 131

ICS COURSES ........................................................................................................................................ 132
Advanced All-Hazards Incident Management –AAIM (2012) ............................................................. 135

Course Information and Required Materials

Command Courses

Course: Chief Fire Officer 3D: Emergency Service Delivery Responsibilities (2014)

- Designed For: The certified Company Officer advancing to the Chief Fire Officer classification
- Description: This course provides students with a basic knowledge of the emergency service requirements related to the roles and responsibilities of a Chief Fire Officer including developing a plan for the integration of fire services resources, developing an agency resource contingency plan, evaluating incident facilities, supervising multiple resources, developing and utilizing an incident action plan, obtaining incident information to facilitate transfer of command, developing and conducting a post-incident analysis, and maintaining incident records.
- Prerequisites: Meet the educational requirements for Company Officer
- Certification: Chief Fire Officer
- Class Size: 25
- Restrictions: None

Required Student Materials

- Chief Officer: Principles and Practice (ISBN: 9780763779290)

Required Instructor Materials

- Chief Officer: Principles and Practice (ISBN: 9780763779290)
- Chief Officer: Principles and Practice Instructor’s Toolkit CD ISBN: 9780763798390
- Chief Officer: Principles and Practice Instructors Test Bank CD ISBN: 9780763798406
- Firescope Field Operations Guide, ICS 420-1, Incident Command System
- Firescope ICS forms
- National Incident Management System (NIMS)

Chief Fire Officer 3D Course Content

Unit 1: Introduction
- Topic 1-1: Orientation and Administration
- Topic 1-2: Executive Chief Officer Certification Process
Unit 2: Emergency Service Resources
- Topic 2-1: Developing a Plan for the Integration of Fire Services Resources
- Topic 2-2: Developing an Agency Resource Contingency Plan

Unit 3: Emergency Service Response
- Topic 3-1: Evaluating Incident Facilities
- Topic 3-2: Supervising Multiple Resources
- Topic 3-3: Developing and Utilizing an Incident Action Plan
- Topic 3-4: Obtaining Incident Information to Facilitate Transfer of Command
- Topic 3-5: Developing and Conducting a Post-Incident Analysis
- Topic 3-6: Maintaining Incident Records

*This is an abbreviated Course Plan. Terminal & Enabling Objectives can be found on the full version located on the SFT Curriculum page of the SFT website at: http://osfm.fire.ca.gov/training/SFTCurriculum.php
Course Information and Required Materials

January 2019
May 2015

Course: Company Officer 2D: All-Risk Command Operations (2014)

Hours: 40 (see course plan for breakdown)

Designed For: Aspiring company officers

Description: This course provides information on conducting incident size-up, developing and implementing an initial plan of action involving single and multiunit operations for various types of emergency incidents to mitigate the situation following agency safety procedures, conducting preincident planning, and develop and conduct a post-incident analysis.

Prerequisites: Meet the educational requirements for Fire Fighter II
ICS-200.B: Incident Command System For Single Resources and Initial Action Incidents
Hazardous Material Incident Commander (as offered by the California Specialized Training Institute)

Certification: Fire Officer (Level I and II)

Standard: Complete all activities and formative tests. Complete all summative tests with a minimum score of 80%.

Max. Class Size: 32

Student/Instructor Ratio: 32:1 (lecture)

Lab: 10:1 (lab)

Restrictions: None

Required Student Materials

- The required textbook chosen by the instructor

Required Instructor Materials

  - IFSTA
  - JB
  - --
- NFPA 1600, Standard on Disaster/Emergency Management and Business Continuity Programs
  - NFPA
- Online Instructor Resources
  - 2013 SFT

Company Officer 2D Course Content

Unit 1: Introduction

- Topic 1-1: Orientation and Administration
- Topic 1-2: Fire Officer Certification Process
- Topic 1-3: Definition of Duty
Unit 2: Emergency Service Delivery
- Topic 2-1: Developing an Initial Plan of Action
- Topic 2-2: Implementing a Plan of Action
- Topic 2-3: Developing and Conducting a Post-Incident Analysis
- Topic 2-4: Identifying Elements of an Operational Plan to Mitigate an Incident
- Topic 2-5: Writing a Report Identifying Service Demand Causes

*This is an abbreviated Course Plan. Terminal & Enabling Objectives can be found on the full version located on the SFT Curriculum page of the SFT website at: [http://osfm.fire.ca.gov/training/SFTCurriculum.php](http://osfm.fire.ca.gov/training/SFTCurriculum.php)
COURSE INFORMATION AND REQUIRED MATERIALS
January 2019 May 2015

Course: Company Officer 2E: Wildland Incident Operations (2014)

Hours: 40 (see course plan for breakdown)

Designed For: Aspiring company officers

Description: This course provides information on evaluating and reporting incident conditions, analyzing incident needs, developing and implementing a plan of action to deploy incident resources completing all operations to suppress a wildland fire, establishing an incident command post, creating an incident action plan, and completing incident records and reports.

Prerequisites: Meet the educational requirements for Fire Fighter II
All Risk Command Operations for Company Officers
S-290 Intermediate Fire Behavior (classroom delivery only)

Certification: Fire Officer (Level I and II)

Standard: Complete all activities and formative tests. Complete all summative tests with a minimum score of 80%.

Max. Class Size: 32

Student/Instructor Ratio: 32:1 (lecture)
10:1 (lab)

Instructor Level: Current State Fire Training registered instructor for Command 1C

Restrictions: None

COMPANY OFFICER 2E COURSE CONTENT

Unit 1: Introduction
- Topic 1-1: Orientation and Administration
- Topic 1-2: Fire Officer Certification Process
Unit 2: Wildland Fire Officer

- Topic 2-2: Developing Reports on Conditions
- Topic 2-3: Formulating an Incident Action Plan
- Topic 2-4: Evaluating and Reporting Ongoing Incident Conditions
- Topic 2-5: Establishing an Incident Command Post
- Topic 2-6: Providing for Emergency Medical Treatment
- Topic 2-7: Deploying Resources to Suppress a Wildland Fire
- Topic 2-8: Updating Supervisors, Crew Members, and Adjoining Personnel
- Topic 2-9: Analyzing Incident Needs
- Topic 2-10: Providing for Assigned Resources’ Needs
- Topic 2-11: Providing Information to the Replacement Incident Commander
- Topic 2-12: Deploying Resources to Mop Up a Wildland Fire
- Topic 2-13: Completing Wildland Fire Suppression Operations
- Topic 2-14: Evaluating Assigned Personnel
- Topic 2-15: Verifying Personnel Qualifications
- Topic 2-16: Evaluating Job Performance
- Topic 2-17: Maintaining Wildland Incident Records
- Topic 2-18: Completing Personnel Time and Equipment Use Records
- Topic 2-19: Preparing Final Incident Reports
- Topic 2-20: Responding to Requests for Incident Information

*This is an abbreviated Course Plan. Terminal & Enabling Objectives can be found on the full version located on the SFT Curriculum page of the SFT website at: [http://osfm.fire.ca.gov/training/SFTCurriculum.php](http://osfm.fire.ca.gov/training/SFTCurriculum.php)
**Course: Executive Chief Fire Officer 4D: Emergency Services Delivery (2014)**

**Hours:** 38:30

**Designed For:** Executive Chief Fire Officer Candidate

**Description:** This course provides the skills and knowledge needed for the Executive Chief Fire Officer to perform his/her duties safely, effectively, and competently. The overarching themes of this curriculum are developing a comprehensive disaster plan and a comprehensive plan for the organization to operate at a civil disturbance.

**Prerequisites:** Meet educational requirements for Chief Fire Officer Certification

**Certification:** Executive Chief Fire Officer

**Standard:** Complete all summative tests with a minimum score of 80%. Complete all activities and formative tests.

**Max. Class Size:** 24

**Inst./Stud. Ratio:** 1:24

**Restrictions:** None

### REQUIRED STUDENT MATERIALS

- Required textbook chosen by the instructor
- Access to a computer and printer

### REQUIRED INSTRUCTOR MATERIALS

Incident Management of High Rise Fires (2017)

40

Aspiring and incumbent company officers and chief officers

This course provides knowledge, skills, and abilities required for those managing incidents occurring in large, multistory buildings. These incidents may present significant management, logistical, and safety challenges to emergency personnel. The size and complexity of the interior spaces; limited, sometimes arduous access; extended travel and response times; and the concentrated occupant load with egress challenges all contribute to the problems faced by emergency responders. Additionally, most high-rise structures are equipped with various environmental, fire protection, and life-safety systems that require support and control. Successful emergency operations in these types of buildings also require preplanning and technical competence on the part of the emergency responders.

1. Fire Command 2A or Incident Management of Major Fires (FSTEP); and
2. Fire Command 1A or Command 1A or Company Officer 2D: All-Risk Command Operations for Company Officers.

None

http://osfm.fire.ca.gov/training/SFTCurriculum

Unit 1: Introduction

- Topic 1-1: Orientation and Administration

Unit 2: Preincident Considerations

- Topic 2-1: Identifying Critical Factors and Hazards
- Topic 2-2: Identifying Construction and Fire-Protection Features

Unit 3: Emergency Operations

- Topic 3-1: Describing the ICS’s Modular Development and Initial Response Roles and Responsibilities
- Topic 3-2: Describing the ICS’s Modular Development and Multidivision/Group (reinforced) Response Roles and Responsibilities
- Topic 3-3: Describing the ICS’s Modular Development and Multibranch Response Roles and Responsibilities

Unit 4: Fire and Life Safety Systems

- Topic 4-1: Assessing and Using Fire and Life-Safety Systems

*This is an abbreviated Course Plan. Terminal & Enabling Objectives can be found on the full version located on the SFT Curriculum page of the SFT website at: http://osfm.fire.ca.gov/training/SFTCurriculum.php
**INCIDENT MANAGEMENT OF MAJOR FIRES COURSE OUTLINE**

**Unit 1: Introduction**
- Topic 1-1: Orientation and Administration

**Unit 2: The Eight Standards of Command**
- Topic 2-1: Identifying the Components of the Process of Assuming Command
- Topic 2-2: Improving Situational Awareness and Identifying the Risk Assessment Process
- Topic 2-3: Establishing a Communications Plan
- Topic 2-4: Developing and Implementing an IAP
• Topic 2-5: Developing an Effective Incident Organization
• Topic 2-6: Initiating Accountability and Command Worksheets
• Topic 2-7: Reviewing, Evaluating, and Revising the IAP
• Topic 2-8: Continuing, Transferring, and Terminating Command

*This is an abbreviated Course Plan. Terminal & Enabling Objectives can be found on the full version located on the SFT Curriculum page of the SFT website at: http://osfm.fire.ca.gov/training/SFTCurriculum.php
Course: Incident Management of the Fire Fighter Emergency (2016)

Hours: 24

Designed For: Incident Commanders

Description: This command level awareness course provides the student with the incident management terminology and methodology that is employed during a fire fighter emergency. Classroom simulations based upon case studies allow students to participate in simulated incident command positions during a fire fighter emergency.

Prerequisites: Basic Incident Command System I-200

Company Officer 2D: All-Risk Command Operations, or Command 1A, or Fire Command 1A

Standard: Attend all classes, complete all activities & the summative test with a min. score of 80%.

Max. Class Size: 25

Student/Instructor Ratio: 25:1 (Lecture/Activities);

10:1 (Skills)

Restrictions: None

REQUIRED STUDENT MATERIALS

- Incident Command Publication, Structure Fire Operations, ICS-500
- Firefighter Incident Safety and Accountability Guidelines, ICS 910

REQUIRED INSTRUCTOR MATERIALS

Other online resources are required and listed on the Course Plan

Course: Command 1A: Structure Fire Command Operations for the Company Officer (2012)

Hours: 40

Designed For: First-in incident commander and company officers

Description: This course provides an introduction to the principles of command, an overview of the concepts of command safety and the risk management process, pre-incident planning considerations, command considerations at structure fire incidents, Company Officer initial actions at an incident including the development of incident priorities, strategy, and tactics, information on the roles and responsibilities of a Company Officer for post-incident actions. Each student will have the opportunity to gain experience in a controlled environment through structure fire incident simulations.

Prerequisites: Fire Fighter I training; I-200: Basic ICS; Prevention 1: Fire and Life Safety Inspections for the Company Officer OR Prevention 1A: Introduction into the California Fire Code and Prevention 1B: Inspection of Fire Protection Systems/Special Hazards.

Certification: Company Officer

Class Size: 25

Restrictions: None

Fire Command 1B: Incident Management for Company Officers (1998)

Hours: 40
Designed For: First-in incident commander and company officers
Description: This course provides the student with information on tactics, strategies, and scene management for multi-casualty incidents, hazardous materials incidents, and wildland fires. Each student also has the opportunity to increase his or her knowledge and skills by handling initial operations at these types of incidents through simulation and class activities.

Prerequisites: I-200, Fire Command 1A OR Command 1A
Certification: Fire Officer
Class Size: 40
Restrictions: None

FIRE COMMAND 1B COURSE OUTLINE

Course Objectives: To provide the student with:
- Information in which to direct the initial operations of a multi-casualty incident.
- Information in which to direct the initial operations of a hazardous materials incident.
- Information in which to direct the initial operations of a wildland fire incident.
- The opportunity to demonstrate the knowledge and skills learned in handling initial operations at hazardous materials, wildland fire, and multi-casualty incidents through simulation and class activities.

Course Content: ........................................................................................................................................................................40:00

Unit 1: Course Overview and ICS Review
Orientation and Administration ..................................................................................................................................................1:00
Course Overview ........................................................................................................................................................................1:00
Fire Command 1A Review ........................................................................................................................................................2:00
Concepts of ICS Organization ................................................................................................................................................3:00

Unit 2: Multi-Casualty Incidents
Components of Triage and START ........................................................................................................................................2:00
ICS and EMS Multi-Casualty .....................................................................................................................................................1:30
ICS-MCI Implementation Overview .........................................................................................................................................1:30

Unit 3: Hazardous Materials Incidents
Hazardous Materials Overview ................................................................................................................................................0:30
Properties of Hazardous Materials .......................................................................................................................................1:00
Toxicology ..............................................................................................................................................................................0:30
Site Control/Work Zones .........................................................................................................................................................0:30
Evacuation Considerations ......................................................................................................................................................1:00
Decision-Making Process .........................................................................................................................................................0:30
ICS and the Hazardous Materials Incident ............................................................................................................................1:30

Unit 4: Wildland Fire Incidents
Factors Affecting Wildland Fires ........................................................................................................................................2:00
Defensive and Offensive Strategies in Wildland Fire Fighting ...............................................................................................0:30
Use of Direct and Indirect Attack Methods on Wildland Fires ......................................................... 1:00
Structure Protection and Triage in Wildland Fires .............................................................................. 2:00
Wildland Fire Safety ......................................................................................................................... 1:00
Simulation Exercises ......................................................................................................................... 14:00
Course Review and Summative Exam ................................................................................................. 2:00
**Course Information and Required Materials**

**January 2019**  **May 2015**

**Course:** Command 1C: WUI Command Operations for the Company Officer (2012)

**Hours:** 40

**Designed For:** First-in incident commander and company officers

**Description:** This course provides information to bring the structural Company Officer out of the city and into the wildland urban interface; in other words, from his or her comfort zone into an area that could be very well quite unfamiliar.

**Prerequisites:** Fire Fighter I training; Fire Command 1A: Command Principles for Company Officers OR Command 1A: Structure Fire Command Operations for the Company Officer; I-200: Basic ICS; S-290: Intermediate Wildland Fire Behavior (NWCG online is acceptable)

**Standard:** Complete all activities and formative tests

**Certification:** Complete all summative tests with a minimum score of 80%

**Class Size:** 32

**Restrictions:** None

### FIRE COMMAND 2A COURSE OUTLINE

**Course Objectives:** To provide the student with:

- A review of the essential topics and activities from Fire Command 1A, including ICS, fire behavior within structures, pre-fire plan, and the role of the first-in-officer.
- Information to assume or transfer command at major structure fires.
- A summary of considerations specific to major structure fire incidents.
- A summary of major fire incident operations and management procedures.
- Information and practices that enhance fire fighter safety and survival at major structure fires.
- The opportunity to apply expanded incident command principles under simulated conditions.

**Course Content:**

<td>2:00</td>
</tr>
</tbody>
</table>

**Hours:** 40
**Designed For:** Chief officers, company officers, and training officers
**Description:** This course provides Incident Commanders with the skills and competency necessary to mitigate an incident, initiate remedial action, and ensure the restoration of normal services with a comprehensive resource management approach. The course is also intended to bring the student to the standard of competency established for On-Scene Commander by OSHA's Final Rule 29 CFR 1910.120 and NFPA 472. Students will participate in simulated incident scenarios and justify their actions in a mock civil court setting.

**Prerequisites:** I-300, Fire Command 1B, Fire Command 2A
**Certification:** Chief Officer
**Class Size:** 40
**Restrictions:** None

### FIRE COMMAND 2B COURSE OUTLINE

**Course Objectives:** To provide the student with:

- An understanding of what haz mats are, the problems they pose, the risks and outcomes of events; their clues, warning signs, placards, labels, shipping papers, and data sheets; the need for a positive safety approach including a mental safe approach tactic upon recognition of the haz mat event.
- The basic principles of first responder and operational actions; recognizing the need for use of ICS safety and isolation, and making the required notifications and contacts in mitigating a haz mat incident; and identifying the role of the Incident Commander/Scene Manager.
- Information to enhance their ability to communicate and coordinate with any agency having authorized activities dealing with a haz mat incident, and recognizing those agencies’ roles and capabilities.
- Information to enhance their ability to conduct local pre-event haz mat plan and techniques to implement the management system used in that plan; and to identify methods of interaction with the state and federal regional response teams.

**Course Content:**

- Course Introduction and Overview .................................................................................................................. 1:00
- Introduction to Hazardous Materials and the IC/Scene Manager ........................................................................ 1:00
- Haz Mat Recognition and Safety ...................................................................................................................... 1:00
- Safety, Isolation, and Notification .................................................................................................................... 1:00

*Hours:* 40

*Designed For:* Chief officers and experienced company officers

*Description:* This course is approached from a system basis and is applied to both small and large high-rise buildings. Topics include prefire planning, building inventory, problem-identification, ventilation methods, water supply, elevators, life safety, strategy and tactics, application of the ICS, and specific responsibilities. Case studies and simulation are used.

*Prerequisites:* T-300, Fire Command 2A

*Certification:* Chief Officer

*Class Size:* 40

*Restrictions:* This course requires a site with adequate materials and equipment to deliver the training according to the course outline.

### FIRE COMMAND 2C COURSE OUTLINE

**Course Content:**

- Do You Have High-Rise In Your Community/Jurisdiction?
- Construction Features Specific To High-rise Buildings
- Water Systems Unique To High-rise Buildings
- Occupant Life Safety
- Prefire Planning and Training For High-rise Fire Fighting
- Building Inventory and Prefire Survey Systems
- Communications Systems
- Specific Areas of Assignment As They Relate To High-rise ICS
- Strategy, Tactics, and Priority Placement of Resources
- Ventilation As It Relates To High-rise buildings
- High-rise Elevator Systems
- Fire Fighter Safety
- Simulation Exercises With Post Fire Analysis and Case Studies
Fire Command 2D: Planning for Large-Scale Disasters (1996)

**Hours:** 40
**Designed For:** Chief officers, company officers, and planners
**Description:** Key topics include: Principles of disaster planning and management, fire service emergency plans, emergency operations centers, case studies of various natural and man made disasters, roles of local, state and federal OES and emergency management agencies, discussion of multi-hazard planning techniques, ICS and SEMS concepts, and principles of exercising emergency management staffs.
**Prerequisites:** I-300, Fire Command 2A
**Certification:** Chief Officer
**Class Size:** 40
**Restrictions:** None

### FIRE-COMMAND-2D COURSE OUTLINE

**Course Objectives:** To provide the student with:
- A brief history of emergency management programs at the local, state, and federal level, their current function, and available funding sources.
- The management tools, techniques, and resources currently available to develop an on-going emergency management program that would involve a range of local government departments, community agencies, and private entities.
- The basic principles and components of emergency management plan development, available guidance, and related terminology to include the usage of the Incident Command System (ICS) and Standardized Emergency Management System (SEMS) concept.
- The basic principles, technical aspects, equipment components, and common features of facilities/areas that may be used as an Emergency Operations Center (EOC), and a description of mutual aid agreement and their application in disaster situations.
- Basic techniques for day-to-day management and how to make the emergency management program a valuable asset to their jurisdiction; to include interface with community groups, private businesses, support groups, and other organizations through training and an exercise development program.
- The current legislative and liability issues, as well as community pressures that are currently influencing emergency management programs to include current information received from recent disaster situations and their impact upon emergency management programs.
- An opportunity to demonstrate their acquired knowledge through programmed exercises and simulations.

**Course Content:**

- Orientation and Administrative Details: 40:00
- Introductions and Purpose of the Course: 1:00
- Description of Emergency Situations: 1:00
- Project Assignment Description: 1:30
- Incident Command System: 0:30
- Functions of an Emergency Operations Center: 0:30
- Design of an Emergency Operating Center: 2:00
- History and Purpose of Federal Emergency Management Program: 1:30
- Structure of Emergency Management Organizations: 1:00
- Jurisdictional Responsibility for Emergency Management: 1:30
- Fire Department Role in Emergency Management: 1:00
- Role of Emergency Management Coordinator: 1:00
- The Planning Process: 1:30

**Fire Command 2E: Wildland Fire Fighting Tactics (1996)**

**Hours:** 40

**Designed For:** Fire officers who have command responsibilities at wildland fires

**Description:** This course contains such topics as California’s wildland fire problem, wildland fire safety, weather effects, wildland fuels, wildland fire behavior, initial attack methods, using support equipment, using topographic maps, strategy and tactics, and air attack operations. Involves class participation and simulation.

**Prerequisites:** I-300, Fire Command 1C, Fire Command 2A

**Certification:** Chief Officer

**Class Size:** 40

**Restrictions:** None

### Fire Command 2E Course Outline

Course Objectives: To provide the student with:

- Information about the command responsibilities pertinent to emergency operations involving wildland fires.
- Information on the principles and methods for planned suppression of wildland fires.
- Information on the tactics and strategies common to wildland fires.
- Information on the resources specifically designed for wildland fire control.
- Information on the specific applications of the Incident Command System used in wildland fires and emergencies.
- The tools and techniques relative to reading maps and assessing topography that can be utilized in their own agency to improve pre-emergency planning and resource deployment.
- The opportunity to gain experience in a controlled environment through simulations.
- Information to manage an incident in a wildland fire.

Course Content:

- Historical Development of the Wildland Fire Problem .................................................. 40:00
- Command Responsibilities ................................................................................................. 2:00
- Pre-emergency Planning .................................................................................................. 2:00
- Tactics and Strategy for Wildland Operations ................................................................. 4:00
- Specialized Wildland Fire Fighting Resource Capability ................................................. 8:00
- Wildland Fire Behavior .................................................................................................... 4:00
- Map Reading and Usage .................................................................................................... 4:00
- Wildland Incident Command Systems ............................................................................. 4:00
- Fire Fighter Safety and Survival ....................................................................................... 1:00
- Simulations ....................................................................................................................... 7:00
- Course Review and Summative Exam ............................................................................. 2:00
Course: Community Risk Educator (2014)

Hours: 24

Designed For: Community Risk Educator Candidate

Description: This course provides the skills and knowledge needed for the Community Risk Educator to perform his/her duties safely, effectively, and competently by coordinating and delivering existing educational programs and information.

Prerequisites:
- Introduction to Incident Command System I-100
- National Incident Management System (NIMS): An Introduction 700
- Instructor I: Instructor Methodology OR Training Instructor 1A Cognitive Lesson Delivery
- Fire Prevention I: Fire & Safety Inspections OR Fire Prevention 1A: Introduction to the California Fire Code Bridge OR Company Officer 2C: Fire Inspections and Investigation OR Three college-level units in Introduction to Fire Technology

Certification: Community Risk Educator

Standard: Complete all summative tests with a minimum score of 80%.
Complete all activities and formative tests.

Max. Class Size: 30
Restrictions: None

**REQUIRED STUDENT MATERIALS**

  - 1ST
  - CB

  OR
    - 3rd

**COMMUNITY RISK EDUCATOR COURSE CONTENT***

Unit 1: Introduction
- Topic 1-1: Orientation and Administration
- Topic 1-2: Community Risk Educator Certification Process

Unit 2: Administration
- Topic 2-1: Documenting and Recording Fire and Life Safety Educational Activities
- Topic 2-2: Completing Fire and Life Safety Activity Reports and Forms
- Topic 2-3: Scheduling and Completing Fire and Life Safety Activities
**COMMUNITY RISK EDUCATOR COURSE CONTENT**

- **Unit 3: Planning and Development**
  - Topic 3-1: Identifying and Sharing Information with Fire and Life Safety Partners

- **Unit 4: Education and Implementation**
  - Topic 4-1: Selecting Fire and Life Safety Instructional Materials
  - Topic 4-2: Practicing Safety During Fire and Life Safety Educational Activities
  - Topic 4-3: Presenting Fire and Life Safety Lesson Plans
  - Topic 4-4: Notifying the Public of Fire and Life Safety Events
  - Topic 4-5: Disseminating Fire and Life Safety Educational Information

- **Unit 5: Evaluation**
  - Topic 5-1: Administering Fire and Life Safety Evaluation Methods
  - Topic 5-2: Scoring Fire and Life Safety Evaluation

*This is an abbreviated Course Plan. Terminal & Enabling Objectives can be found on the full version located on the SFT Curriculum page of the SFT website at: [http://osfm.fire.ca.gov/training/SFTCurriculum.php](http://osfm.fire.ca.gov/training/SFTCurriculum.php)*
Course Information and Required Materials

Course: Community Risk Officer (2014)

Hours: 46:30

Designed For: Community Risk Officer Candidate

Description: This course provides the skills and knowledge needed for the Community Risk Specialist to perform his/her duties safely, effectively, and competently by creating, administering, and evaluating educational programs and information; and managing a Junior Firesetting Intervention Program and the activities of the JFIS I.

Prerequisites:
- Community Risk Specialist
- Youth Firesetting Prevention and Intervention Level II NFA-FO634; OR Youth Firesetting Prevention and Intervention NFA-RO629
- PIO Awareness EMI G-289 State OES Delivery
- JIS/JIC Planning EMI G-291 State OES Delivery
- Intermediate Wildland Fire Behavior NWCG S-290
- Intermediate Incident Command System I-300

Certification: Community Risk Officer

Standard: Complete all summative tests with a minimum score of 80%. Complete all activities and formative tests.

Max. Class Size: 30

Restrictions: None

### COMMUNITY RISK OFFICER COURSE CONTENT*

**Unit 1: Introduction**
- Topic 1-1: Orientation and Administration
- Topic 1-2: Community Risk Educator Certification Process

**Unit 1: Introduction**
- Topic 1-1: Orientation and Administration
- Topic 1-2: Community Risk Officer Certification Process

**Unit 2: FLSE Administration**
- Topic 2-1: Developing a Fire and Life Safety Education Budget
- Topic 2-2: Formulating Alternate Fire and Life Safety Program Development and Delivery Systems
COMMUNITY RISK OFFICER COURSE CONTENT*

Unit 3: FLSE Planning and Development
- Topic 3-1: Developing a Comprehensive Fire and Life Safety Education Strategy
- Topic 3-2: Creating a Fire and Life Safety Education Coalition
- Topic 3-3: Projecting Future Fire and Life Safety Needs
- Topic 3-4: Proposing Fire and Life Safety Public Policy
- Topic 3-5: Developing a Fire and Life Safety Marketing Plan

Unit 4: FLSE Education and Implementation
- Topic 4-1: Creating Fire and Life Safety Educational Messages
- Topic 4-2: Establishing Administration Policies for Fire and Life Safety Education
- Topic 4-3: Creating a Training Program for Fire and Life Safety Educators
- Topic 4-4: Creating a Fire and Life Safety Internal Awareness Campaign
- Topic 4-5: Creating Fire and Life Safety Education Reports

Unit 5: FLSE Evaluation
- Topic 5-1: Implementing Public Health Surveillance Systems
- Topic 5-2: Evaluating Fire and Life Safety Educational Programs

Unit 6: JFIS Administration
- Topic 6-1: Formulating JFIS Program Policies and Procedures
- Topic 6-2: Developing a JFIS Program Budget
- Topic 6-3: Identifying and Assigning a JFIS I
- Topic 6-4: Supervising a JFIS I
- Topic 6-5: Maintaining Records and Case Files of Juvenile Firesetters

Unit 7: JFIS Planning and Development
- Topic 7-1: Developing JFIS Interagency Networks
- Topic 7-2: Developing and Selecting Approved JFIS Forms and Materials
- Topic 7-3: Designing a JFIS Training Program
- Topic 7-4: Developing a JFIS Community Awareness Program
- Topic 7-5: Creating and Maintaining JFIS Data Collection Systems

Unit 8: JFIS Education and Implementation
- Topic 8-1: Delivering an Internal JFIS Training Program
- Topic 8-2: Maintaining JFIS Interagency Networks
- Topic 8-3: Delivering JFIS Community Awareness Training

Unit 9: JFIS Evaluation
- Topic 9-1: Evaluating JFIS Programs
- Topic 9-2: Analyzing JFIS Program Effectiveness
- Topic 9-3: Preparing JFIS Program Reports
Course Information and Required Materials

Course: Community Risk Specialist (2014)
Hours: 57
Designed For: Community Risk Specialist Candidate
Description: This course provides the skills and knowledge needed for the Community Risk Specialist to perform his/her duties safely, effectively, and competently by preparing educational programs and information to meet identified needs; conducting JFS intakes/interviews to determine needs for referral and/or implementing educational intervention strategies; and managing interactions with the media and articulating organizational messages as a PIO.

Prerequisites:
- Community Risk Educator
- Introduction to Incident Information, NWCG S-203
- Introduction to Wildland Fire Behavior NWCG S-190
- ICS for Single Resources and Initial Action Incidents I-200.B
- Youth Firesetting Prevention and Intervention Level I NFA-F0633; OR Youth Firesetting Prevention and Intervention NFA-R0629
- Public Information Officer Awareness, EMI Independent Study IS-289

Certification: Community Risk Specialist
Standard: Complete all summative tests with a minimum score of 80%. Complete all activities and formative tests.

Max. Class Size: 30
Restrictions: None

- **Topic 7-1:** Reviewing JFIS Case Files
- **Topic 7-2:** Initiating JFIS Contact with Families
- **Topic 7-3:** Conducting JFIS Intakes and Interviews
- **Topic 7-4:** Determining JFIS Intervention Options
- **Topic 7-5:** Implementing JFIS Interventions
- **Topic 7-6:** Implementing JFIS Referral Processes

**Unit 8: JFIS Evaluation**
- **Topic 8-1:** Collecting and Recording JFIS Feedback
- **Unit 9:** Public Information Officer
- **Topic 9-1:** Conducting Media Interviews and Preparing News/Press Releases
- **Topic 9-2:** Establishing Media Areas
- **Topic 9-3:** Disseminating Information to the Media
- **Topic 9-4:** Disseminating Information to Community Groups
- **Topic 9-5:** Preparing Media Advisories
- **Topic 9-6:** Disseminating Information Internally
- **Topic 9-7:** Coordinating a News Conference

*This is an abbreviated Course Plan. Terminal & Enabling Objectives can be found on the full version located on the SFT Curriculum page of the SFT website at: [http://osfm.fire.ca.gov/training/SFTCurriculum.php](http://osfm.fire.ca.gov/training/SFTCurriculum.php)
## DRIVER/OPERATOR COURSES

**Course Information and Required Materials**

**January 2019 May 2015**

### Aerial Apparatus Operations (2015)

**Course:** Aerial Apparatus Operations (2015)

**Hours:** 40

**Designed For:** Career and volunteer fire service personnel who drive and operate a fire department aerial apparatus

**Description:** This course provides information on aerial apparatus preventive maintenance and operations. Topics include routine tests, inspections, and servicing functions on the systems and components unique to an aerial apparatus; maneuvering, positioning, and stabilizing an aerial apparatus; maneuvering, positioning, and lowering the aerial device; and deploying and operating an elevated master stream. This course is based on the 2014 edition of NFPA 1002 Standard for Fire Apparatus Driver/Operator Professional Qualifications.

**Prerequisites:**
- Successfully completed OSFM Fire Fighter I training
- Fire Apparatus Driver/Operator 1A (2008 or 2015 version)
- Hold a valid Class C Firefighter Endorsed driver’s license (minimum)
- Completed a minimum of four (4) hours driving an aerial apparatus
- Completed the activities from Driver/Operator 1A while driving an aerial apparatus

**Certification:**
- Fire Apparatus Driver/Operator – Aerial Apparatus
- Complete all summative tests with a minimum score of 80%.
- Complete all activities and formative tests.

**Max. Class Size:** 30

**Stud./Instructor Ratio:**
- 30:1 (Lecture); 10:1 (Skills)

**Instructor Level:**
- This courses requires one (1) primary instructor and sufficient assistant instructors to meet the skills ratio

**Restrictions:**
- Sufficient fire apparatus and adequate space to accommodate the students in the class and the required skills

BASIC EMERGENCY VEHICLE OPERATIONS COURSE OUTLINE

Course Objectives: To provide the student with...

- Information on driver responsibilities, vehicle laws, and defensive driving techniques.
- Information and techniques on basic inspections and maintenance of emergency vehicles.
- Information and techniques for operating an emergency vehicle prior to the run, during the run, while at the emergency and when returning to the unit's quarters.
- An opportunity to increase his or her driving skills using simulated driving conditions.

Course Content: ................................................................. 16:00

Introduction to Emergency Vehicle Operation ................................................................. 0:30
State and Local Laws Relating to Emergency Vehicle Operations .............................. 0:20
Department Driving Rules and Regulations ................................................................. 0:30
Principles of Driving Techniques ............................................................................... 1:00
Principles of Safe Driving of Emergency Vehicles During "Code 3” Response .............. 1:00
Driving Safety Considerations for Off Road Operations ........................................... 0:30
Driver Safety While Working on Freeway Emergencies ............................................ 0:30
Placement of Emergency Vehicles at an Emergency Scene ...................................... 0:10
Mobile Pumping Safety Considerations .................................................................... 0:20
How to Perform Routine Emergency Inspection ....................................................... 0:10
How to Read and Interpret Vehicle Gauges ............................................................... 0:30
How to Perform Routine Emergency Vehicle Maintenance ..................................... 0:45
How to Complete Routine Maintenance Records and Reports .............................. 0:15
Development of an Equipment Inventory Checks ..................................................... 0:30
How to Make Daily Equipment Inventory Checks ..................................................... 0:30
Development of a Route Map Book ........................................................................ 0:30
How to Drive Apparatus ......................................................................................... 1:00
How to Maneuver Apparatus Through Serpentine Exercise ................................... 1:00
How to Maneuver Apparatus Through Offset Alley Exercise .................................. 1:00
How to Maneuver Apparatus Through Straight Line Exercise ............................... 1:00
How to Maneuver Apparatus Through Turn Around Exercise .................................. 1:00
How to Maneuver Apparatus Through Diminishing Clearance Exercise ............... 1:00
How to Maneuver Apparatus While Mobile Pumping ............................................. 1:00
How to Maneuver Apparatus on Up and Down Hill Exercise .................................... 1:00
COURSE INFORMATION AND REQUIRED MATERIALS

Course: Basic Pump Operations (1993)

Hours: 16

Designed For: All fire service personnel

Description: This course provides the student with the information and skills training for operating fire service pumps. Topics include types of pumps, engine and pump gauges, maintenance, unsafe pumping conditions, pressure relief devices, cooling systems, water supplies, drafting, and field hydraulics. Each student also has the opportunity to increase his or her pumping skills during simulated pumping conditions.

Prerequisites: None

Certification: None

Max. Class Size: 25

Restrictions: This course requires a site with adequate materials and equipment to deliver the training according to the course outline.

Course Information and Required Materials

January 2019 – May 2015

Hours: 40

Designed For: Career and volunteer fire service personnel who drive and operate fire apparatus

Description: This course provides information on fire apparatus preventive maintenance and driving/operating. Topics include routine tests, inspections, and servicing functions, operate, back, maneuver, and turn a fire apparatus in a variety of conditions; and operate all fixed systems and equipment on a fire apparatus. This course is based on the 2014 edition of NFPA 1002 Standard for Fire Apparatus Driver/Operator Professional Qualifications. This course fulfills the requirements for a Class C Firefighter Endorsement.

Prerequisites: Hold a valid Class C driver’s license (minimum)

Certification: Fire Apparatus Driver/Operator – Pumping Apparatus

Standard: Complete all summative tests with a minimum score of 80%. Complete all activities and formative tests.

Max. Class Size: 30

Stud./Instructor Ratio: 30:1 (Lecture); 10:1 (Skills)

Instructor Level: This course requires one (1) primary instructor and sufficient assistant instructors to meet the skills ratio

Restrictions: Sufficient fire apparatus and adequate space to accommodate the students in the class and the required skills

### DRIVER/OPERATOR 1A COURSE CONTENT*

#### Unit 1: Introduction
- Topic 1-1: Orientation and Administration
- Topic 1-2: Fire Apparatus Driver/Operator - Pumping Apparatus Certification Process
Unit 2: Preventive Maintenance
- Topic 2-1: Perform Routine Tests, Inspections, and Servicing Functions
- Topic 2-2: Document Routine Tests, Inspections, and Servicing Functions

Unit 3: Driver/Operating
- Topic 3-1: Operate a Fire Apparatus
- Topic 3-2: Operate a Fire Apparatus Using Defensive Driving Techniques
- Topic 3-3: Back a Fire Apparatus from a Roadway into a Restricted Space
- Topic 3-4: Maneuver a Vehicle around Obstructions on a Roadway While Moving Forward and in Reverse
- Topic 3-5: Turn a Fire Apparatus 180 Degrees within a Confined Space
- Topic 3-6: Maneuver a Fire Apparatus in Areas with Restricted Horizontal and Vertical Clearances
- Topic 3-7: Operate All Fixed Systems and Equipment on a Fire Apparatus

*This is an abbreviated Course Plan. Terminal & Enabling Objectives can be found on the full version located on the SFT Curriculum page of the SFT website at: http://osfm.fire.ca.gov/training/SFTCurriculum.php

Hours: 40

Designed For: Career and volunteer fire service personnel who drive and operate fire apparatus

Description: This course provides information on pumping apparatus preventive maintenance and operations. Topics include routine tests, inspections, and servicing functions; producing hand, master, and foam fire streams, relay pump operations; and supplying water to fire sprinkler and standpipe systems. This course is based on the 2014 edition of NFPA 1002 Standard for Fire Apparatus Driver/Operator Professional Qualifications.

Prerequisites: Fire Apparatus Driver/Operator 1A (2008 or 2015 version), Successfully completed OSFM Fire Fighter I

Hold a valid Class C Firefighter Endorsed driver’s license (minimum)

Certification: Fire Apparatus Driver/Operator – Pumping Apparatus

Standard: Complete all summative tests with a minimum score of 80%. Complete all activities and formative tests.

Max. Class Size: 30

Stud./Instructor Ratio: 30:1 (Lecture); 5:1 (Skills)

Instructor Level: This course requires one (1) primary instructor and sufficient assistant instructors to meet the skills ratio

Restrictions: Sufficient fire apparatus and adequate space to accommodate the students in the class and the required skills

**DRIVER/OPERATOR 1B COURSE CONTENT***

**Unit 1: Introduction**

- Topic 1-1: Orientation and Administration
### DRIVER/OPERATOR 1B COURSE CONTENT*

- **Topic 1-2:** Fire Apparatus Driver/Operator - Pumping Apparatus Certification Process

### Unit 2: Preventive Maintenance

- **Topic 2-1:** Perform and Document Routine Tests, Inspections, and Servicing Functions Unique to Pumping Apparatus

### Unit 3: Operations

- **Topic 3-1:** Produce an Effective Hand or Master Stream
- **Topic 3-2:** Relay Pumping Operation
- **Topic 3-3:** Produce a Foam Fire Stream
- **Topic 3-4:** Supply Water to Fire Sprinkler and Standpipe Systems

*This is an abbreviated Course Plan. Terminal & Enabling Objectives can be found on the full version located on the SFT Curriculum page of the SFT website at: [http://osfm.fire.ca.gov/training/SFTCurriculum.php](http://osfm.fire.ca.gov/training/SFTCurriculum.php)
COURSE INFORMATION AND REQUIRED MATERIALS

Hours: 40
Designed For: Career and volunteer fire service personnel who drive and operate a tillered apparatus
Description: This course provides information on operating a fire department aerial apparatus equipped with a tiller. Topics include practical driving exercises; and operating, positioning, and stabilizing the apparatus from both the tractor and tiller positions. This course is based on the 2014 edition of NFPA 1002 Standard for Fire Apparatus Driver/Operator Professional Qualifications.

Prerequisites: Successfully completed OSFM Fire Fighter I training
Fire Apparatus Driver/Operator 1A (2015 or 2008 curriculum)
Hold a valid Class C Firefighter Endorsed driver’s license (minimum)

Certification: Fire Apparatus Driver/Operator – Tillered Apparatus
Standard: Complete all summative tests with a minimum score of 80%.
Complete all activities and formative tests.

Max. Class Size: 30
Stud./Instructor Ratio: 30:1 (Lecture);
10:1 (Skills)
Instructor Level: This course requires one (1) primary instructor and sufficient assistant instructors to meet the skills ratio
Restrictions: Sufficient fire apparatus and adequate space to accommodate the students in the class and the required skills

TILLERED APPARATUS OPERATIONS COURSE CONTENT*

Unit 1: Introduction
- Topic 1-1: Orientation and Administration
- Topic 1-2: Fire Apparatus Driver/Operator - Tillered Apparatus Certification Process

Unit 2: Operations
- Topic 2-1: Perform the Practical Driving Exercises
- Topic 2-2: Operate a Tillered Apparatus
- Topic 2-3: Position and Stabilize a Tillered Apparatus

*This is an abbreviated Course Plan. Terminal & Enabling Objectives can be found on the full version located on the SFT Curriculum page of the SFT website at: http://osfm.fire.ca.gov/training/SFTCurriculum.php

CFSTES
## COURSE INFORMATION AND REQUIRED MATERIALS

**January 2019**  
**May 2015**

**Course:** Water Tender Operations (2015)  
**Hours:** 32

**Designed For:** Career and volunteer fire service personnel who drive and operate a water tender

**Description:** This course provides information on water tender preventive maintenance and operations. Topics include routine tests, inspections, and servicing functions unique to a water tender; maneuvering and positioning a water tender at a water shuttle fill site; and establishing, maneuvering, and positioning at a water shuttle dumpsite. This course is based on the 2014 edition of *NFPA 1002 Standard for Fire Apparatus Driver/Operator Professional Qualifications*.

**Prerequisites:**  
- Hold a valid Class C Firefighter Endorsed driver’s license (minimum)  
- Successfully completed OSFM Fire Fighter I training  
- Fire Apparatus Driver/Operator 1A (2008 or 2015 version)  
- Fire Apparatus Driver/Operator 1B (2008 or 2015 version)  
- Completed a minimum of four (4) hours driving a water tender  
- Completed the activities from Driver/Operator 1A while driving a water tender

**Certification:**  
- Fire Apparatus Driver/Operator – Water Tender Apparatus  
  - Complete all summative tests with a minimum score of 80%.  
  - Complete all activities and formative tests.

**Max. Class Size:** 30  
**Stud./Instructor Ratio:** 30:1 (Lecture); 10:1 (Skills)  
**Instructor Level:** This course requires one (1) primary instructor and sufficient assistant instructors to meet the skills ratio  
**Restrictions:** Sufficient fire apparatus and adequate space to accommodate the students in the class and the required skills

- Topic 2-1: Perform and Document Routine Tests, Inspections, and Servicing Functions Unique to Water Tenders

**Unit 3: Operations**
- Topic 3-1: Operate a Water Tender
- Topic 3-2: Maneuver and Position a Water Tender at a Water Shuttle Fill Site
- Topic 3-3: Establish a Water Shuttle Dumpsite
- Topic 3-4: Maneuver and Position a Water Tender at an Established Water Shuttle Dumpsite

*This is an abbreviated Course Plan. Terminal & Enabling Objectives can be found on the full version located on the SFT Curriculum page of the SFT website at: [http://osfm.fire.ca.gov/training/SFTCurriculum.php](http://osfm.fire.ca.gov/training/SFTCurriculum.php)

Hours: 24

Designed For: Career and volunteer fire service personnel who drive and operate a wildland fire apparatus

Description: This course provides information on preventive maintenance and operation of a wildland fire apparatus. Topics include routine tests, inspections, and servicing functions on the systems and components unique to wildland fire apparatus, and operating a wildland fire apparatus and producing an effective fire stream. This course is based on the 2014 edition of NFPA 1002 Standard for Fire Apparatus Driver/Operator Professional Qualifications.

Prerequisites: Hold a valid Class C Firefighter Endorsed driver’s license (minimum)
Successfully completed OSFM Fire Fighter I training
Fire Apparatus Driver/Operator 1A (2008 or 2015 version)
Fire Apparatus Driver/Operator 1B (2008 or 2015 version)
Completed a minimum of four (4) hours driving a wildland fire apparatus
Completed the activities from Driver/Operator 1A while driving a wildland fire apparatus

Certification: Fire Apparatus Driver/Operator – Wildland Fire Apparatus

Standard: Complete all summative tests with a minimum score of 80%.
Complete all activities and formative tests.

Max. Class Size: 30
Stud./Instructor Ratio: 30:1 (Lecture); 10:1 (Skills)

Instructor Level: This course requires one (1) primary instructor and sufficient assistant instructors to meet the skills ratio

Restrictions: Sufficient fire apparatus and adequate space to accommodate the students in the class and the required skills

Course Information and Required Materials

Hours: 40
17:00 hours instruction; 20:00 hours practical application, 3:00 hours testing

Designed For: Firefighters assigned to aerial/tiller apparatus

Description: This course is designed for the driver/operator responsible for operating fire apparatus-equipped with an aerial device. Topics include inspecting, maintaining, and testing of aerial devices. Practical application requires driving an aerial apparatus including tiller operations, positioning and stabilizing the apparatus, and operating the aerial device.

Prerequisites: Fire Apparatus Driver/Operator 1A

Certification: None

Standard: 80% on summative exam

Driving and Practical Exercise: the standard is set by Authority Having Jurisdiction (AHJ).

Class Size: 30

Restrictions: This course requires a site with adequate materials and equipment to deliver the training according to the course plan.

Required Student Materials

- Aerial Apparatus Driver/Operator Handbook
- California Commercial Driver Handbook
- Manufacturer’s Specifications

Required Instructor Materials

- Aerial Apparatus Driver/Operator Handbook
- Aerial Apparatus Driver/Operator Instructor Resource Kit
- California Commercial Driver Handbook
- California Vehicle Code
- Title 49 CFR Transportation

Manufacturer’s Specifications

Driver/Operator: Aerial/Tiller Truck Operations Course Plan

Unit 1: Course Introduction

Topic 1-1: Orientation and Administration

Terminal Learning Objective (TLO): At the end of this topic, the student will be able to identify the classroom and facility requirements along with the course completion requirements.

Enabling Learning Objectives (ELO):
1. Identify facility and classroom requirements
   - Start and end times
   - Breaks
   - Restrooms
   - Food locations

Page 51
1. Smoking locations
2. Emergency procedures
3. Electronic devices
4. Special needs and accommodations
5. Other requirements

2. Review the course syllabus
   1. Course objectives
   2. Calendar of events
   3. Course requirements
   4. Student evaluation process (80% is required on the summative test)
   5. Assignments and activities
   6. Required student resources
   7. Class participation requirements

Discussion Questions:
1. What are formative and summative tests?

Activities:
1. Complete all required registration and enrollment forms

Unit 2: Inspections, Tests, and Servicing Functions

Topic 2-1: Basic Inspection Requirements for Aerial and Tillers

Terminal Learning Objective (TLO): At the end of this topic, the student will be able to describe and demonstrate the inspection requirements of aerial devices including a basic pretrip inspection, inspection of the cable, hydraulic, slides and roller, stabilizing, safety breathing air and communication systems and be able to identify the out of service criteria for aerals and tiller apparatus.

Enabling Learning Objectives (ELO):
1. Review a basic pretrip inspection
   - Battery(ies)
   - Braking
   - Cooling
   - Electrical
   - Fuel
   - Hydraulic
   - Oil/lubrication
   - Tires/rims
   - Steering
   - Belts
   - Others specific to DOT/DMV laws
2. Describe the specific inspection requirements for the different systems on aerial device
   - Cables
   - Aerial hydraulics
   - Slides and Rollers
Driver/Operator: Aerial/Tiller Truck Operations Course Plan

- Stabilizing devices
- Aerial safety devices
- Breathing air
- Communications

3. Describe the specific inspection requirements for a tiller apparatus
   - Steering system
   - Brakes
   - Trailer
   - Lubrication

4. Identify out of service criteria for an aerial/tiller apparatus

5. Demonstrate a pretrip inspection of an aerial/tiller apparatus

Discussion Questions:
1. How often must pretrip inspections be conducted?
2. What are the main systems of an aerial device that need to be inspected?
3. What may place an aerial device out of service according to NFPA?

Activities:
1. Pretrip inspection on an aerial/tiller apparatus

Topic 2-2: Test Requirements for Aerial and Tillers

Terminal Learning Objective (TLO): At the end of this topic, the student will be able to describe and demonstrate the test requirements of aerial devices including safety device for lower the aerial device without power.

Enabling Learning Objectives (ELO):
1. Describe the various tests required for aerial devices
2. Demonstrate the emergency operations of an aerial device

Discussion Questions:
1. What are the different types of tests that need to be performed on an aerial device?

Activities:
1. Perform an emergency lower of an aerial device without power

Topic 2-3: Servicing of Aerial and Tillers Apparatus

Terminal Learning Objective (TLO): At the end of this topic, the student will be able to describe and demonstrate the servicing requirements of aerial devices including proper lubrication of the aerial and associated equipment.

Enabling Learning Objectives (ELO):
1. Identify the service requirements for an aerial device
   - Intervals
   - Processes
   - Documentation
2. Demonstrate the servicing of an aerial device based on manufacturer’s recommendations

Discussion Questions:
1. How often should an aerial be serviced?

Activities:
1. Perform a service on an aerial device
Unit 3: Review of Driver Operator Responsibilities

Topic 3-1: California Vehicle Codes

Terminal Learning Objective (TLO): At the end of this topic, the student will be able to describe the laws associated with the operation of emergency vehicles.

Enabling Learning Objectives (ELO):
1. Describe the California Vehicle Code (CVC) sections associated with the operation of emergency vehicles
   - §65
   - §130
   - §21055 and §21056
   - Driving under the influence
2. Describe the CVC sections associated with liabilities
   - §17001
   - §17002
   - §17003
3. Define the minimum standards for a driver’s license

Discussion Questions:
1. How does the CVC affect the operation of emergency vehicles?
2. What type of liability does a fire department assume?
3. What license is required to operate an emergency vehicle in California?

Activities:
1. To be determined by the instructor

Topic 3-2: Driver’s Responsibilities

Terminal Learning Objective (TLO): At the end of this topic, the student will be able to describe the responsibilities associated with the operation of an aerial/tiller apparatus.

Enabling Learning Objectives (ELO):
1. List expectations of emergency vehicle operator
   - Safety of crew
   - Safety of citizens
2. Describe the authority having jurisdiction (AHJ) policies and procedures for the operation of an aerial/tiller
3. List the National Fire Protection Association (NFPA) standards that are relevant to emergency vehicle operations
   - 1002
   - 1451
   - 1500
   - 1915
4. Describe the requirements of Title 49 CFR on a driver’s license

Discussion Questions:
1. How does the CVC affect the operation of emergency vehicles?
2. What type of liability does a fire department assume?

Activities:
1. To be determined by the instructor

Unit 4: Operation of an Aerial/Tiller Fire Apparatus

**Topic 4-1: Operating and Control of Aerial/Tiller Fire Apparatus**

Terminal Learning Objective (TLO): At the end of this topic, the student will be able to identify and describe the characteristic of defensive driving, the principles of tiller operations, what effects vehicle control, how to communicate between the tiller and driver and the principles of driving at night and in adverse weather conditions.

Enabling Learning Objectives (ELO):
1. Define the characteristics of a defensive driver
2. Identify the principles of tiller operations
3. Describe the effects on vehicle control of general steering reaction:
   - Momentum
   - Inertia
   - Centrifugal force
   - Weight transfer
   - Steering methods
   - Driving zones
   - Vehicle control
4. Describe the methods of communication between the driver and the tiller position
5. Describe the methods used to negotiate intersection
6. Identify the principle of driving at night and in adverse weather conditions
7. Describe the manufactures operational limitation of the apparatus.

Discussion Questions:
1. What are the characteristics of a defensive driver?
2. What are the basic principles of steering control in a tiller?

Activities:
1. To be determined by the instructor

**Topic 4-2: Operating Aerial and Tiller Apparatus**

Terminal Learning Objective (TLO): At the end of this topic, the student will be able to operate aerial and aerial truck with a tiller through practical driving exercises as well as on a public roadway not striking the vehicle or obstructions.

Enabling Learning Objectives (ELO):
1. Operate aerial apparatus through the practical driving exercises as specified in §4.3.2 through §4.3.5 of NFPA 1002 current edition
   - Serpentine
   - Ally Dock
   - Close maneuver turn around
   - Diminishing clearance
DRIVER/OPERATOR: AERIAL/TILLER TRUCK OPERATIONS COURSE PLAN

1. Station-Backing
2. Operate aerial apparatus on a public way meeting the specific maneuvers as identified in §4.3.1 of NFPA 1002
   • Refer to standard for description of maneuvers

Discussion Questions:
1. What are the five practical driving exercises?

Activities:
1. Operate an aerial apparatus through the practical driving exercises as identified in §4.3.2 through §4.3.5, so that each exercise is performed without striking the vehicle or obstructions
2. Drive apparatus on a public way meeting the requirements of §4.3.1 maneuvers
   • Note: This activity is completed outside of the scheduled class time

Unit 5: Aerial Device Operations

Topic 5-1: Stabilizing Aerial Apparatus

Terminal Learning Objective (TLO): At the end of this topic, the student will be able to describe and operate an aerial apparatus stabilization system.

Enabling Learning Objectives (ELO):
1. Describe the hydraulic system
   • Pump
   • Pressure relief
   • Tank
   • Operating controls
   • Back-up system
   • Other requirements
2. Describe the manufactures recommendation for stabilization
3. Describe the effects of topography and ground conditions on stabilization
4. Operate the stabilization system creating a stable platform for operating the aerial device

Discussion Questions:
1. How is the power transferred to the hydraulic system?
2. When stabilizing an aerial what ground condition should be observed?

Activities:
1. Students will demonstrate the operation of the hydraulic stabilization systems providing for a stable platform for the operation of the aerial device.

Topic 5-2: Maneuvering and Positioning an Aerial Device

Terminal Learning Objective (TLO): At the end of this topic, the student will be able to describe and operate an aerial apparatus stabilization system.

Enabling Learning Objectives (ELO):
1. Describe the safe operating limits of a given aerial device
   • Angle of inclination
   • Maximum tip loads
   • Angle from chassis axis
DRIVER/OPERATOR: AERIAL/TILLER TRUCK OPERATIONS COURSE PLAN

1. Reach
2. Describe the gauges and operating controls of the aerial device
3. Describe the emergency operating system
4. Identify the electrical and communication systems
5. Describe the manual rotation and lower systems
6. Describe the safety override and the hazards of using them.
7. Describe the aerial device safety
   - Locking system
   - Cable system
   - Operation near electrical hazards
8. Describe the procedures for bedding the aerial device

Discussion Questions:
1. What are the emergency operating systems on an aerial device?
2. What kinds of electrical systems are on aerial devices?

Activities:
1. To be determined by the instructor

Topic 5-3: Operating the Aerial Device

Terminal Learning Objective (TLO): At the end of this topic, the student will be able to operate the aerial device maneuvering it from each control station given an incident location.

Enabling Learning Objectives (ELO):
1. Demonstrate the operation of the aerial device
2. Demonstrate bedding the aerial device

Discussion Questions:
1. What is the process for raising an aerial device?
2. What are your concerns when operating near a structure?

Activities:
1. Raise, rotate, extend, and position the aerial device to a specific location
2. Lock, unlock, retract, lower, and bed an aerial device

Unit 6: Apparatus Placement

Topic 6-1: General Apparatus Placement

Terminal Learning Objective (TLO): At the end of this topic, the student will be able to identify the general apparatus placement at the various types of emergencies.

Enabling Learning Objectives (ELO):
1. Identify the considerations for apparatus placement at structure fires
2. Identify the consideration for apparatus placement at a rescue
3. Identify the consideration for placement at other types of emergencies

Discussion Questions:
1. What are your considerations when placing an aerial apparatus at the scene of a structure fire?
2. What are tactical priorities that may determine apparatus placement?

Activities:
DRIVER/OPERATOR: AERIAL/TILLER TRUCK OPERATIONS COURSE PLAN

1. To be determined by the instructor

Topic 6-2: Apparatus Placement for use of an Elevated Master Stream

- Terminal Learning Objective (TLO): At the end of this topic, the student will be able to deploy and operate an elevated master stream and flow the desired amount of water at an incident.

- Enabling Learning Objectives (ELO):
  1. Identify the nozzle reactions
  2. Identify the range of operation
  3. Identify the weight limitations when operating with an elevated master stream
  4. Demonstrate deploying and connecting a water supply to a master stream device
  5. Operate an elevated master stream manually or remotely

- Discussion Questions:
  1. What are your considerations when operating an elevated master stream device?
  2. What are tactical priorities that may determine apparatus placement when using an elevated master stream?

- Activities:
  1. Place an elevated master stream into operations

**Hours:** 40  
**Designed For:** Fire service emergency response personnel  
**Description:** Updated to reflect current California Vehicle Code (CVC) requirements and the 2009 NEPA 1002 Standard for Fire Apparatus Driver/Operator Professional Qualifications. This course provides the student with information on driver responsibilities, recognized standards, and related laws for fire apparatus. Topics include basic inspections, documentation, maintenance, and troubleshooting fire apparatus, and techniques on driving and positioning fire apparatus. Each student also has the opportunity to increase his or her driving skills during simulated driving conditions.  
**Prerequisites:** Fire apparatus driving experience on a public way. Option 1: Signed verification from the Fire Chief (form is on the SFT website); Option 2: California Class B driver’s license, fire fighter-restricted; or Option 3: California Class A, B, or C driver’s license, fire fighter-endorsed Fire Fighter I training recommended  
**Certification:** Fire Apparatus-Driver/Operator I  
**Class Size:** 25  
**Restrictions:** This course requires a site with adequate materials and equipment to deliver the training according to the course outline.

### FIRE APPARATUS DRIVER/OPERATOR 1A COURSE OUTLINE

**Course Objectives:** To provide the student with...  
- Information on driver responsibilities, recognized standards, and related laws for fire apparatus.  
- Information and techniques on basic inspections, documentation, maintenance, and troubleshooting fire apparatus.  
- Information and techniques on driving and positioning fire apparatus.  
- The opportunity to increase their driving skills during simulated driving conditions.

**Hours:** 40

**Designed For:** Fire service emergency response personnel

**Description:** Updated to reflect the 2009 NFPA 1002 Standard for Fire Apparatus Driver/Operator Professional Qualifications and requires a textbook and student supplement. This course provides the student with information on pump construction and theory of pump operations. Topics include methods for performing basic hydraulics and techniques on basic inspections, documentation, maintenance, and troubleshooting fire pumps. Each student also has the opportunity to increase his or her pumping skills during simulated pumping conditions.

**Prerequisites:** California drivers license, Class A, B or C, with a fire fighter endorsement.

**Certification:** Fire Apparatus Driver/Operator I

**Class Size:** 25

**Restrictions:** This course requires a site with adequate materials and equipment to deliver the training according to the course outline.

### FIRE APPARATUS DRIVER/OPERATOR 1B COURSE OUTLINE

**Course Objectives:** To provide students with:
- Information on pump construction and theory of pump operations.
- Methods for performing basic hydraulics.
- Information and techniques on inspections, documentation, maintenance, and troubleshooting.
- The opportunity to increase their pumping skills during simulated pumping conditions.

**Course Content:**

Unit 1: Responsibilities, Standards, and Laws
- Orientation and Administration ........................................... 1:30
- Fire Apparatus Driver/Operator Responsibilities ....................... 0:30

Unit 2: Fire Pump Construction and Theory
- Types of Fire Pumps .......................................................... 0:45
- Pump Mounting and Drive Arrangements .................................. 0:30
- Pump Piping and Valves ..................................................... 0:15
- Automatic Pressure Control Devices ..................................... 0:15
- Priming Devices ..................................................................... 0:15
- Pump Panel Instrumentation ................................................ 0:15
- Auxiliary Cooling Devices ................................................... 0:15

Unit 3: Hydraulics
- Basic Hydraulic Terminology and Symbols ................................ 0:30
- Mathematics Review ................................................................ 1:00
- Characteristics of Water and Principles of Pressure ................. 0:30
- Principle Features of Water Systems ...................................... 0:15
- Nozzle Theory ......................................................................... 0:30
- Calculating Gallons Per Minute ............................................. 0:30
# Course Outline

## Unit 1: Principles of Pumping Operations
- Principles of Friction Loss .................................................. 0:15
- Friction Loss Formulas and Calculations ............................... 4:00
- Pump Discharge Pressure .................................................. 0:30
- Fireground Hydraulic Calculations ..................................... 1:00

## Unit 2: Operating Principles
- Inspection, Maintenance, and Troubleshooting .....................
  - Unit 2: Inspection, Maintenance, and Troubleshooting ..........
    - Inspecting the Pump Drive Systems ............................... 0:15
    - Inspecting the Pump Priming Systems ......................... 0:15
    - Inspecting the Pump Pressure Control Systems .............. 0:15
    - Pump Service Testing .............................................. 0:45
    - Maintenance of the Pump and Control Systems .............. 1:00

## Unit 3: Pump Practices
- Making the Pump Operational (From Tank) ......................... 0:30
- Transitioning to an External Water Supply ......................... 0:30
- Operating From a Hydrant ............................................. 0:30
- Principles and Practices of Drafting Operations ................ 0:30
- Principles of Relay Pump Operations ................................ 1:30
- Troubleshooting Pump Operations ................................... 1:00
- Principles of Tandem Pump Operations ............................... 0:15
- Principles of Dual Pumping Operations .............................. 0:15
- Principles and Practices of Foam Operations ...................... 1:00
- Sprinkler and Standpipe Support ..................................... 0:30

## Unit 4: Pumping Exercises
- Unit 4: Pumping Exercises ..............................................
  - Introduction to the Pumping Exercises ........................... 0:30
  - Practice and Testing the Pumping Exercises ................... 13:00
  - Unit Test .............................................................. 2:00
  - Course Review and Summative Exam ............................... 2:00

Hours: 7

Designed For: Fire Service Personnel

Description: This course provides the knowledge and understanding of skills and resources necessary to respond to an ATR incident as a single incident, or as a component of large scale disaster involving large and small animal and human elements, and to do so in a safe and effective manner, with low impact on ongoing emergency services operations. This course also meets and exceeds NFPA 1670 Chapter 17.1 - 17.2 guidelines and covers the most likely animal species that first responders are called to rescue and manage: cattle (beef and dairy), horses, including working horses (police mounts, SAR), companion animals and working dogs (SAR, K-9).

Prerequisites: ICS 100 and ICS 200

Certification: None

Standard: NFPA 1670, Chapter 17.1 - 17.2

Max. Class Size: 50

Stud./Instructor Ratio: 25:1

Restrictions: None

### COURSE INFORMATION AND REQUIRED MATERIALS

**January 2019**

**Auto Extrication (1996)**

**Hours:** 16

**Designed For:** All fire service personnel

**Description:** Provides hands-on experience in the procedures and systems utilized during an automobile extrication. Subjects covered include: Auto extrication, types of hand and power tools, removing windows, opening doors, removing roofs, pulling steering wheels, moving foot pedals, raising dashes, pulling seats, stabilization of vehicles, and simulated rescues of trapped victims.

**Prerequisites:** None.

**Certification:** None.

**Class Size:** 40

**Student/Instructor:** Ratio 10:1 (for skills proficiency)

**Restrictions:** This course requires a site with adequate materials and equipment to deliver the training according to the course outline.

**AUTO EXTRICATION COURSE OUTLINE**

**Course Objectives:** To provide the student with:

* Information on the incidents they might encounter and the procedures and systems used during auto extrication.
* Information on the types of auto extrication tools and their uses.
* The proper procedure for maintaining auto extrication tools.
* An opportunity to perform a rescue and use auto extrication tools during an exercise involving simulated victims and damaged vehicles.

**Course Content**

- Introduction and Course Procedures ......................................................................................................................... 0:30
- Safety Precautions .......................................................................................................................................................... 0:10
- Auto Extrication Size-up .................................................................................................................................................. 1:00
- Types of Incidents That May be Encountered .................................................................................................................. 1:00
- Types of Tools and Their Application ............................................................................................................................ 1:00
- Incident Command System for Auto Extrication ................................................................................................................ 0:30
- How to Remove the Front Windshield ............................................................................................................................ 0:20
- How to Remove Side and Rear Windows .......................................................................................................................... 0:10
- How to Open a Door Using a Panel Cutter ........................................................................................................................ 0:10
- How to Open a Door Using a Spreader and Wedge ............................................................................................................. 0:10
- How to Pull a Door Using a Come-along .......................................................................................................................... 0:15
- How to Remove a Roof Using an Air Chisel ....................................................................................................................... 0:10
- How to Cut "A" Pillars Using a Hacksaw ............................................................................................................................ 0:10
- How to Remove a Roof Using an Air Chisel, Hacksaw, and High-lift Jack ........................................................................ 0:20
- How to Pull a Steering Wheel Using a Come-along .......................................................................................................... 0:15
- How to Pull a Steering Wheel Using a High-lift Jack ......................................................................................................... 0:15

- How to Pull a Steering Wheel Using a Scissor Jack ............................................................................................................. 0:10
- How to Cut a Steering Wheel Ring With a Bolt Cutter ...................................................................................................... 0:06
- How to Move Foot Pedals Using Seatbelts .......................................................................................................................... 0:10
- How to Raise a Dash Using High-lift Jacks ........................................................................................................................ 0:20
- How to Pull a Front Seat Using a Come-along .................................................................................................................... 0:10
- How to Pull a Front Seat Using a High-lift Jack .................................................................................................................. 0:10
- How to Take Out a "B" Pillar Using an Air Chisel ............................................................................................................... 0:10
- How to Use Cribbing to Stabilize a Vehicle ....................................................................................................................... 0:10
- How to Make a Three-door Out of a Two-door for Rear Seat Rescue ................................................................................ 0:15
- Maintenance of Auto Extrication Tools ........................................................................................................................... 0:15
- Using Auto Extrication Tools on Vehicles ...................................................................................................................... 4:00
- Simulation Rescues of Trapped Victims ........................................................................................................................... 3:30
Command and Control of the RIC Deployment (2011)

**Hours:** 8

**Designed For:** Fire officers who may be Incident Commanders at a fire fighter emergency

**Description:** This command level awareness course provides students with the terminology and methodology that is employed during a RIC deployment. Classroom simulations based on case studies allow students to participate in simulated RIC deployments. Students who wish to progress to the operational level may initiate a task book for additional experience.

**Prerequisites:** I-200, Fire Command 1A, and successful completion of pre-course work. RIC Tactics or RIC Operations is recommended

**Certification:** None

**Class Size:** 25

### COMMAND AND CONTROL OF THE RIC DEPLOYMENT COURSE OUTLINE

**Course Objectives:** To provide the student with...

- Information on rapid intervention crew terminology and the tools required to conduct a rescue operation.
- A methodology for conducting a risk management assessment of structural fire-fighting critical fireground factors.
- An analysis of fire fighter line-of-duty injuries and fatalities case studies, taking into account both risk and critical fireground factors.
- A command awareness and the control techniques required to effectively manage an emergency traffic event.
- Techniques to properly manage an emergency traffic situation when fire fighters become lost or trapped inside a burning structure.

**Course Content**

- Orientation and Administration
- Critical Fireground Factors and the Risk Management Process
- Fire Fighter Line of duty Death and Injury Case Studies
- Command Awareness and Managing A RIC Deployment
- Emergency Traffic Simulations

**CONFINED SPACE RESCUE AWARENESS COURSE OUTLINE**

**Course Objectives:** To provide the student with...
- Information on the codes that affect operations within confined spaces.
- Information to identify confined spaces and permit confined spaces.
- Information on the hazards of confined spaces.
- Information on the equipment and procedures required to deal with a confined space rescue safely and legally.
- Information on the basic operational positions, and their responsibilities as set forth by Cal/OSHA.

**Course Content:**

- Introduction to Cal/OSHA Code, Confined Space Identification and Dangers: 7:00
- Atmospheric Hazards and Air Monitors: 1:30
- Physical and Engulfment Hazards: 0:30
- Lock-Out/Tag-Out Procedures and Entry Permits: 0:30
- Ventilation Equipment and Techniques: 0:30
- Respiratory Equipment and Techniques: 0:30
- Communications Equipment and Techniques: 0:30
- Entrant Retrieval Equipment: 0:30
- Confined Space Operational Positions and Responsibilities: 0:30
- Course Review and Final Exam: 1:00
REQUIRED STUDENT MATERIALS

- Any textbook(s) required by the instructor

REQUIRED INSTRUCTOR MATERIALS

- Instructor Guide
- Cal-OSHA CCR Title 8 Article 108 § 5157
- Worker Deaths in Confined Spaces: A Summary of NIOSH Surveillance and Investigative Findings, U.S. Department of Health and Human Services, Public Health Service, Centers for Disease Control and Prevention, and National Institute for Occupational Safety and Health
- The Confined Space Guide, California Department of Industrial Relations
- Department of Transportation Emergency Response Guidebook (DOT ERG)
- Policies and procedures of the authority having jurisdiction
- Training for Hazardous Materials Response: Confined Space Rescue (IAFF)
- Various online resources

Instructors may choose to use one of the following manuals:

- Training for Hazardous Materials Response: Confined Space Rescue (IAFF)

CONFINED SPACE RESCUE AWARENESS COURSE OUTLINE

Unit 1: Introductions
- Topic 1-1: Orientation and Administration

Unit 2: Overview of Confined Spaces
- Topic 2-1: Identifying Regulations and Standards
- Topic 2-2: Describing the History and Dangers of Confined-Space Incidents
- Topic 2-3: Defining and Recognizing a Confined Space
- Topic 2-4: Defining and Recognizing a Permit-Required Confined Space
Unit 3: Confined Space Incidents

- Topic 3-1: Recognizing Hazards
- Topic 3-2: Isolating Hazards and Minimizing Risks
- Topic 3-3: Recognizing the Need for Support Resources and Managing Resources
- Topic 3-4: Ensuring Resource Application Fits Requirements
- Topic 3-5: Recognizing the Need for Technical Rescue Resources
- Topic 3-6: Initiating Search
- Topic 3-7: Establishing and Communicating Victim Survival Profile
- Topic 3-8: Evaluating and Performing of Nonentry Rescue
- Topic 3-9: Describing the Positions and Components of a Permit-Required Confined-Space Entry
- Topic 3-10: Terminating the Incident

Emergency Response to Alternative Fuel Vehicles Course Outline

Course Objectives: To provide the student with...
- An overview of the social, economic and ecological issues of alternative fuel vehicles
- Information on the hazards associated with each fuel/energy source
- Techniques to identify alternative fuel/energy vehicles
- Information on the safety features and components of the refueling facilities
- An application of standard operating guidelines to new fuel/energy vehicle technologies

Course Content:
- Introduction and Course Procedures .................................................. 0:30
- Introduction to Internal Combustion Vehicles ...................................... 0:15
- Ethanol Fuel ...................................................................................... 1:00
- Biodiesel ........................................................................................... 0:45
- Compressed Natural Gas (CNG) ......................................................... 1:00
- Liquefied Natural Gas Propane (LNG) .................................................. 1:00
- Propane ............................................................................................. 0:30
- Hydrogen ......................................................................................... 1:00
- Introduction to Electric Vehicles ....................................................... 0:15
- Electric Vehicles ............................................................................... 1:00
- Hybrid Electric Vehicles .................................................................... 0:30
- Hybrid Electric Buses ......................................................................... 0:30
- Fuel Cell Vehicles ............................................................................. 1:00
- Introduction to Emergency Response .................................................. 0:15
- Alternative Fuel Vehicle Emergencies & Fires .................................. 1:00
- Extrication Safety & Organization ..................................................... 2:00
- Vehicle & Refueling Activities ............................................................ 4:00

FIRE FIGHTING/RESCUE COURSES Page 73
Course Information and Required Materials

Course: Fire Control 1: Basic Fire Chemistry (1996)

Hours: 16

Designed For: All entry-level fire service personnel

Description: This course is a basic overview of fire chemistry and fire behavior designed for the beginning or a volunteer fire fighter. Includes: Classes of fire, fundamentals of heat transfer, fire characteristics of materials, products of combustion, hazardous and explosive materials, extinguishing agents, size-up, and exposure protection.

Prerequisites: None

Certification: None

Max. Class Size: 40

Restrictions: None

Required Student Materials

- None

Required Instructor Materials

- None

FIRE CONTROL 1 COURSE OUTLINE

Course Objectives: To provide the student with...

- Information on how and why fires start.
- Information on how and why fires spread.
- Information on how and why fires are controlled.

Course Content

1. Course Introduction .................................................................................. 0:30
2. Classes of Fire. ....................................................................................... 0:30
3. Fundamentals of Combustion .................................................................. 1:00
4. Fundamentals of Heat Transfer ............................................................... 0:30
5. Fundamentals of Extinguishment. ........................................................... 0:30
6. Fire Characteristics of Ordinary Combustible Solids ......................... 0:30
7. Fire Characteristics of Flammable and Combustible Solids ............... 0:30
8. Products of Combustion ........................................................................ 1:00
9. Hazardous and Explosive Materials ..................................................... 1:00
10. Effects of Extinguishing Agent Application ......................................... 1:00
11. Procedures for Size-Up ........................................................................ 1:00
12. Rescue Techniques ............................................................................... 1:00
13. Exposure Protection Tactics ................................................................ 1:00
14. Ventilation Methods and Procedures .................................................. 1:00
15. Methods Used to Confine Fire ............................................................... 1:00
16. Methods Used to Extinguish Fire ......................................................... 1:00
17. Methods Used to Overhaul Fire ............................................................ 0:30
18. Salvage Operations ............................................................................... 1:00
19. Pre-Fire Plans ....................................................................................... 1:00
20. Methods Used to Attain Additional Assistance During Multiple Alarm Fires .................................................. 0:30
Course Information and Required Materials

Hours: 16
Designed For: All entry-level fire service personnel
Description: A hands-on course designed to provide the student with information, methods, and techniques for operating basic fire fighting tools and carrying out basic fire fighting evolutions. Areas covered include Hose, nozzles, and fittings, ground ladders, self-contained breathing apparatus, pump operations in theory, pump operations in the field, and the use of fire extinguishers.

Prerequisites: None
Certification: None
Max. Class Size: 40
Restrictions: None

FIRE CONTROL 2 COURSE OUTLINE

Course Objectives: To provide the student with...
- Information on the types of tools used for basic fire operations.
- Methods and techniques for utilizing basic fire fighting tools.
- Methods and techniques for maintaining basic fire fighting tools.
- Information and utilization of pump operations and procedures.

Course Information and Required Materials

Course: Fire Control 3A: Structural Fire Fighting in Acquired Structures (2009)
Hours: 16
Designed For: All fire service personnel
Description: This course is designed to develop fundamental skills in combating structure fires by providing the students with a thorough understanding of fire behavior, ventilation procedures and techniques, interior fire attack, and exterior fire attack. In many cases, this will be the fire fighter’s first exposure to live structural fire fighting. The structures used in class are generally donated buildings with a written agreement between the owner and the authority having jurisdiction (AHJ) specifying the live fire training that will be conducted and acknowledges the expected condition of the structure upon completion of the training.

Prerequisites: Fire Control 2 (recommended)
Certification: None
Max. Class Size: Dependent on the number of structures and size of the burn
Student/Instruction Ratio: 10:1 (Skills Proficiency)

Restrictions: This course requires both a Primary Coordinator and a Senior Coordinator. This course also requires a site with adequate materials and equipment to deliver the training according to the course outline.

REQUISITE STUDENT MATERIALS

- None

Course: Fire Control 4: Controlling Ignitable Liquids and Gases (2015)

Hours: 16

Designed For: Individuals pursuing SFT Firefighter II certification

Description: This course provides the knowledge and skills that prepare a firefighter to extinguish an ignitable liquid fire, control a flammable gas fire, and develop an incident action plan for a pipeline emergency.

Prerequisites: SFT Firefighter I training (completion of education requirements)
SFT or CSTI – Fire Responder Hazmat Operational (FRO)

Certification: None

Standard: Complete all activities and skills

Max. Class Size: Determined by student/instructor ratio

Stud./Instructor Ratio: ∞:1 (Lecture/Activities);
5:1 (Skills: 1 senior, 1 primary, and as many assistant instructors needed to meet the 5:1 ratio)

Restrictions: This course requires both a Primary and a Senior Instructor (Senior cannot function as both the Senior and Primary Instructor).

Other Restrictions - See Facilities, Equipment, and Personnel requirements section of the Course Plan

FIRE CONTROL 4 COURSE OUTLINE

Unit 1: Introduction
- Topic 1-1: Orientation and Administration

Unit 2: Ignitable Liquid Fires
- Topic 2-1: Extinguishing an Ignitable Liquid Fire with Foam
Unit 3: Flammable Gas Fires
  • Topic 3-1: Controlling a Flammable Gas Fire

Unit 4: Pipeline Emergencies
  • Topic 4-1: Identifying Pipeline Regulations
  • Topic 4-2: Identifying Pipeline Regulations
  • Topic 4-3: Identifying Hazards Associated with Liquid Pipeline Products
  • Topic 4-4: Identifying Hazards Associated with Gas Pipeline Products
  • Topic 4-5: Developing an Incident Action Plan

*This is an abbreviated Course Plan. Terminal & Enabling Objectives can be found on the full version located on the SFT Curriculum page of the SFT website at: http://osfm.fire.ca.gov/training/SFTCurriculum.php
Fire Control 4: Oil and Gas Fire Fighting (1997)

Hours: 16

Designed For: All fire service personnel

Description: This course utilizes live fire situations to hands-on experience in combating fire involving LPG and flammable liquids. Topics include flammable liquid and gas fire behavior, safety, extinguishing agents, transportation fires, water flow requirements, and live fire fighting.

Prerequisites: None.
Certification: None.

Class Size: 40

Student/Instructor: Ratio: 10:1 (Skills Proficiency)

Restrictions: This course requires both a Primary Instructor and a Senior Instructor. This course also requires a site with adequate materials and equipment to deliver the training according to the course outline.

### FIRE CONTROL 4 COURSE OUTLINE

Course Objectives: To provide the student with:

- Information on the concept of chemistry of foam for fire suppression.
- Information on the use of proportional and nonproportional concentrate injection systems.
- Methods for operation and performance of fog nozzles, aspirating nozzles, and foam tubes (NAFS) as well as compressed air foam systems (CAFS).
- Information on application techniques, current research, and report on the use of Class B foaming agents for urban, rural, refinery, and pipeline emergencies.

Course Content

- Introduction .................................................................................................................. 16:00
- Characteristics of Flammable Liquids ........................................................................ 0:30
- Resource Available for Spills Without Fire .............................................................. 0:15
- Safety Procedures for Foam Application ..................................................................... 0:15
- Foaming Agents .......................................................................................................... 1:00
- Introduction to Pipeline Related Emergencies ........................................................ 1:00
- Eductors, Proportioners, and Systems ...................................................................... 1:00
- Aspirating Nozzles and Foam Delivery ..................................................................... 0:15
- Flammable Liquids Case Histories and Review ....................................................... 1:15
- Field Exercises .......................................................................................................... 10:00
Fire Control 4A: Flammable Gases Fire Fighting (1996)

Hours: 6

Description: This course utilizes the flammable liquids and gas (FLAG) trailer to generate live fire situations and provide hands-on experience in combating fires involving flammable gases. Subjects include flammable gas behavior, safety, control methods and extinguishing agents, transportation fires, and water flow requirements.

Prerequisites: None
Certification: None

Class Size: 40

Restrictions: This course requires both a Primary Instructor and a Senior Instructor. This course also requires a site with adequate materials, equipment, and FLAG trailer to deliver the training according to the course outline.

Course Information and Required Materials

Course: Fire Control 5: Aircraft Rescue and Fire Fighting (1988)

Hours: 16 without a live burn or 24 with a live burn

Designed For: All fire service personnel

Description: This course provides students with the methods and techniques necessary for crash fire rescue services at airports. Subjects include using conventional fire and specialized CFR apparatus, CFR extinguishing agents, types of aircraft, standby procedures, aqueous film forming foam, dual agent systems, and operations at crash scenes. The 24-hour class delivery includes a live burn.

Prerequisites: None

Certification: None

Max. Class Size: 40

Student/Instructor Ratio: 10:1 (Skills Proficiency)

Restrictions: This course requires a Senior Instructor if the class includes the live burn. This course also requires a site with adequate materials and equipment to deliver the training according to the course outline.

FIRE CONTROL 5 COURSE OUTLINE

Course Objectives: To provide the student with...

- Information on organizing and equipping an airport CFR service.
- Information on procedures and techniques for CFR operations.
- The methods and techniques of utilizing CFR tools and equipment.
- Proper procedures on the maintenance and storage of CFR tools and equipment.

Course Content

- Identify Organization of an Airport CFR System ................................................................. 24:00
- Identify Types of Specialized Tools and Equipment Used for CFR ..................................... 0:30
- Utilizing Conventional Fire Apparatus and Equipment for CFR ......................................... 0:20
- Identify Types of Extinguishing Agents Used for CFR .................................................... 0:20
- Identify Types of Aircraft .................................................................................................. 0:30
- Identify Safety Procedures When Working With Aircraft .................................................... 0:20
- Describe Standby Procedures for Incoming Aircraft With Possible CFR Problems ................ 0:30
- Identify Methods of Positioning Apparatus and Personnel at the CFR Scene ...................... 1:00
- Operate Dry and CO2 Chemical Fire Extinguishers ............................................................... 1:00
- Operate Pressurized Water Fire Extinguishers With AFFF Additive .................................... 1:00
- Operate Dry Chemical and PW With AFFF Extinguishers in Dual Agent Application .............. 1:30
- Operate Conventional and Specialized CFR Apparatus ...................................................... 2:00
- Use a Refractometer to Verify Proper Foam Delivery .......................................................... 0:30
- Position Apparatus for CFR Standby Position ..................................................................... 2:00
- Position Apparatus at an On-Field Crash Position ............................................................. 2:00
- Use Specialized CFR Apparatus to Control an On-Field Crash .......................................... 4:00
- Use Conventional Apparatus to Control an On-Field Crash ............................................... 4:00
Recharge Specialized CFR Apparatus ................................................................. 0:30
Inspect and Maintain Specialized CFR Apparatus ........................................... 1:00
Store Airport CFR Apparatus ........................................................................... 0:30
Course Information and Required Materials

Hours: 16

Designed For: All fire service personnel

Description: This course provides information, methods, and techniques for the utilization of the California Fire and Rescue Mutual Aid Plan, Incident Command System, wildland fire fighting strategy and tactics, structure triage, terminology, survival skills and operating safely in a wildland fire-fighting incident.

FIRE CONTROL 6 COURSE OUTLINE

Course Objectives: To provide the student with...

- An overview of the California Fire and Rescue Mutual Aid Plan and their responsibilities participating in a strike team.
- Information using the ICS during emergency operations while responding as strike team.
- A variety of methods and techniques to operate in a wildland suppression effort with safety.
- An opportunity to apply major principles of strategy and tactics in wildland fire fighting operations.
- The tactics and methods to provide structure protection during wildland fire suppression.
- Wildland fire fighting survival skills for potential extreme wildland fire conditions.

Course: Fire Control 7: Wildland Fire Fighting
Hours: 16
Designed For: All fire service personnel
Description: This course provides hands-on experience in fighting wildland or agricultural crop fires. Exercises include: Fire behavior, hand tools, helicopter support, dozer operations, mobile pumping, backfiring/burning out safety, progressive hose lays, water tender shuttle, initial attack, and wildland fire investigation.
Prerequisites: Fire Control 6 (recommended)
Certification: None
Max. Class Size: 40
Student/Instructor Ratio: 10:1 (Skills Proficiency)
Restrictions: This course requires both a Primary Instructor and a Senior Instructor. This course also requires a site with adequate materials and equipment to deliver the training according to the course outline. A course outline must be submitted and approved by State Fire Training.

**REQUIRED STUDENT MATERIALS**

- None

**REQUIRED INSTRUCTOR MATERIALS**

- None
**Course Information and Required Materials**

**January 2019 - May 2015**

**Course:** Fire Fighter I (2013)

**Hours:** 394:30

**Designed For:** Entry level fire fighter

**Description:** This course provides the skills and knowledge needed for the entry level professional fire fighter to perform his/her duties safely, effectively, and competently. The curriculum is based on the 2013 edition of NFPA 1001 Standard for Fire Fighter Professional Qualifications, the 2012 edition of NFPA 1051 Standard for Wildland Fire Fighter Professional Qualifications, and the 2008 edition of NFPA 472 Standard for Competence of Responders to Hazardous Materials/Weapons of Mass Destruction Incidents. The seven overarching themes of the California State Fire Fighter I curriculum are: general knowledge germane to the profession, fire department communications, fireground operations, rescue operations, preparedness and maintenance, wildland suppression activities, and hazardous materials/WMD.

**Prerequisites:** Minimum of Public Safety First Aid and CPR (CA Health and Safety Code 1797.182)

**Corequisites:**
- Confined Space Awareness (CA Code of Regulations, Title 8, Section 5157)
- Introduction to the Incident Command System (ICS-100), FEMA
- National Incident Management System, An Introduction (IS-700.A), FEMA

**Standard:** Complete all activities and formative tests. Complete all summative tests with a minimum score of 80%. Complete all mandatory skills testing.

**Max. Class Size:** 50

**Instructor Level:** Training Instructor 1A and 1B

**Instructor/Student Ratio:** 1:50 (Lecture); 1:10 (Skills)

**Restrictions:** None

### FIRE FIGHTER I COURSE OUTLINE

**Unit 1: Introduction**
- Topic 1-1: Orientation and Administration
- Topic 1-2: Fire Fighter I Certification Process
- Topic 1-3: General Knowledge Requirements

**Unit 2: Fire Fighter Safety**
- Topic 2-1: Health and Safety
- Topic 2-2: Structural Personal Protective Ensemble
- Topic 2-3: Self-Contained Breathing Apparatus
- Topic 2-4: Responding on an Apparatus
- Topic 2-5: Operating at an Emergency Scene

**Unit 3: Communications**
- Topic 3-1: Operating a Phone in an Non-emergency Situation
- Topic 3-2: Initiating a Response to an Emergency
- Topic 3-3: Operating Fire Department Radios

**Unit 4: Fire Tools and Equipment**
- Topic 4-1: Ropes and Knots
- Topic 4-2: Hand and Power Tools
- Topic 4-3: Portable Electric and Lighting Equipment
- Topic 4-4: Maintenance

**Unit 5: Structural Fire Suppression**
COURSE INFORMATION AND REQUIRED MATERIALS

- Topic 5-1: Building Construction and Related Hazards
- Topic 5-2: Fire Behavior
- Topic 5-3: Fire Extinguishers
- Topic 5-4: Water Supply Systems
- Topic 5-5: Fire Hose
- Topic 5-6: Utility Control at Emergencies
- Topic 5-7: Ground Ladder Operations
- Topic 5-8: Forcible Entry
- Topic 5-9: Structure Fire Search and Rescue Operations
- Topic 5-10: Structural Fire Fighting Operations
- Topic 5-11: Horizontal Ventilation Operations
- Topic 5-12: Vertical Ventilation Operations
- Topic 5-13: Property Conservation
- Topic 5-14: Overhaul

Unit 6: Fire Fighter Survival
- Topic 6-1: Structural Fire Fighter Survival

Unit 7: Suppression of Fire Outside of a Structure
- Topic 7-1: Exterior Fires
- Topic 7-2: Passenger Vehicle Fires

Unit 8: Wildland Fire Suppression
- Topic 8-1: Wildland Response
- Topic 8-2: Wildland Personal Protective Equipment
- Topic 8-3: Wildland Tools and Equipment
- Topic 8-4: Wildland Fire Behavior
- Topic 8-5: Wildland Fire Safety
- Topic 8-6: Wildland Human Factors on the Fireline
- Topic 8-7: Wildland Suppression
- Topic 8-8: Reinforcing a Fireline
- Topic 8-9: Wildland Urban Interface
- Topic 8-10: Mop-up Operations
- Topic 8-11: Conducting Patrols

Unit 9: Hazardous Materials/WMD
- Topic 9-1: Recognizing Hazardous Materials/WMD
- Topic 9-3: Emergency Decontamination
- Topic 9-4: Mitigating a Hazardous Materials/WMD Incident

*This is an abbreviated Course Plan. Terminal and Enabling Learning Objectives can be found on the full version located on the SFT website at: http://osfm.fire.ca.gov/training/firefighter2013.php
**CURRICULUM DISCONTINUED DECEMBER 31, 2015**

**Fire Fighter I (2001)**

- **Hours:** 259 plus manipulative performance testing
- **Designed For:** Entry level firefighters
- **Description:** This course provides the fire fighter with the knowledge and skills to safely perform, under minimal supervision, essential and advanced firefighting tasks, basic rescue operations, basic fire prevention and fire investigation tasks, and to use, inspect, and maintain fire fighting and rescue equipment.
- **Prerequisites:** None
- **Certification:** Fire Fighter I
- **Class Size:** Department determination
- **Restrictions:** This course requires a site with adequate materials and equipment to deliver the training according to the course outline.

### REQUIRED STUDENT MATERIALS

- Various Fire Service Training Manuals (refer to Instructor Guide)

### REQUIRED INSTRUCTOR MATERIALS

**COURSE INFORMATION AND REQUIRED MATERIALS**

January 2019 May 2015
Course Information and Required Materials

Course: Fire Fighter II (2013)

Hours: 120:00

Designed For: Fire Fighter I

Description: This course provides the skills and knowledge needed for the entry level professional firefighter to perform his/her duties safely, effectively, and competently. The curriculum is based on the 2013 edition of NFPA 1001 Standard for Fire Fighter Professional Qualifications. The five overarching themes of the California State Fire Fighter II curriculum are: general knowledge germane to the profession, fire department communications, fireground operations, rescue operations, and prevention, preparedness, and maintenance.

Prerequisites: Certified Fire Fighter I

Corequisites: None

Standard: Complete all activities and formative tests. Complete all summative tests with a minimum score of 80%. Complete all mandatory skills testing.

Max. Class Size: 50

Instructor Level: Training Instructor 1A and 1B

Instructor/Student Ratio: 1:50 (Lecture); 1:10 (Skills)

Restrictions: None

### REQUIRED STUDENT MATERIALS

### REQUIRED INSTRUCTOR MATERIALS

- Fundamentals of Fire Fighter Skills (Includes Instructor’s Toolkit DVDs) (Jones and Bartlett Learning, Third Edition, ISBN: 978-1-4496-7085-6),

- Skill Sheets

FIRE FIGHTER II COURSE OUTLINE

Unit 1: Introduction
- Topic 1-1: Orientation and Administration
- Topic 1-2: Fire Fighter II Certification Process
- Topic 1-3: General Knowledge Requirements

Unit 2: Fire Department Communications
- Topic 2-1: Completing Incident Reports
- Topic 2-2: Basic Company Communications

Unit 3: Fireground Operations
- Topic 3-1: Extinguishing an Ignitable Liquid Fire
- Topic 3-2: Controlling a Flammable Gas Cylinder Fire
- Topic 3-3: Coordinating an Interior Attack Line
- Topic 3-4: Protecting Evidence of Fire Cause and Origin

Unit 4: Rescue Operations
- Topic 4-1: Vehicle Extrication
- Topic 4-2: Assisting in Rescue Operations

Unit 5: Prevention, Preparedness, and Maintenance
- Topic 5-1: Performing a Fire Safety Survey at a Private Dwelling
- Topic 5-2: Presenting Fire Safety Information
- Topic 5-3: Preparing Preincident Surveys
- Topic 5-4: Maintaining Power Equipment
- Topic 5-5: Performing Annual Hose Service Test

Fire Fighter Survival (2010)

Hours: 16
Designed For: All fire service personnel
Description: This course was developed in the continuing effort to reduce the number of fire fighter injuries and fatalities that occur on an annual basis and provides a greater understanding how to avoid committing fatal errors on the fireground. Avoiding situations that could cause you to become lost trapped, or injured is the best way to prevent tragedies at a fire scene. Topics include fire fighter survival terminology, developing a survival attitude, increasing situational awareness, and being trained in problem-solving techniques so you can become more self-reliant in an emergency. Case studies will be reviewed to outline factors common in many line-of-duty deaths (LODDs) across the nation.

Prerequisites: None
Certification: None
Max Class Size: Student/Instructor ratio is 10:1 (40 student’s maximum with four Primary Instructors)
Restrictions: This course requires a site with adequate materials and equipment to deliver the training according to the course outline.

FIRE FIGHTER SURVIVAL COURSE OUTLINE

Course Objectives: To provide the student with...
- Fire fighter survival terminology.
- Knowledge of the federal government involvement to reduce fire fighter injuries and fatalities and the guidelines and laws put in place from tragic fire loss events.
- Fire fighter fatality case study recommendations to enhance fire fighter training to handle their own emergencies on the fireground.
- Techniques for developing fire fighter survival attitude and identify personal equipment that fire fighters should carry in their possession for self-preparedness measures.
- Situational awareness to prevent the fire fighter emergency and recognize critical structural fireground factors.
- Knowledge and the application of "When to call a fire fighter emergency" and emergency communications when fire fighters become lost, trapped, or disoriented inside a burning structure.
- SCBA knowledge and techniques for air awareness and SCBA air emergencies, and applying them during hands-on evolutions.

Course Content: 
- Orientation and Administration: 16:00
- Developing A Survival Attitude: 0:45
- Preventing the Fire Fighter Emergency: 0:45
- The Fire Fighter Emergency: 0:45
- SCBA Emergencies: 0:45
Fire Fighter Survival Skills

- #1: SCBA Emergency Procedure Check
- #2: Calling "Mayday"
- #3: Reading Couplings
- #4: Window Hang
- #5: Hose Slide
- #6: Emergency Ladder Escape – Hook-two/Slide-to-four Method
- #7: Entanglement Emergencies – Swim or Sweep Method
- #8: Entanglement Emergencies – SCBA Removal Method
- #9: Wall Breach
- #10: Changing Your SCBA Profile – Non-removal Method
- #11: Changing Your SCBA Profile – Low or Reduced Profile (Partial-removal Method)
- #12: Changing Your SCBA Profile – Zero or No Profile (Full-removal Method)

Fire Fighter Survival Evolutions

- #1: SCBA Confidence Course
- #2: SCBA Awareness
**Course Information and Required Materials**

**January 2019**

**Course:** Fireline Safety Awareness for Hired Vendors (2011)

**Hours:** 8:00

**Designed For:** Hired vendors working with CAL FIRE or USFS on any active wildland fire, including water tender operators, heavy equipment with water operators (Skidgine), dozer operators, crew bus drivers, vehicle drivers, mechanics, fallers, swampers, and chain saw operators.

**Description:** This course provides an awareness of fireline safety to hired vendors who plan to engage in wildland fire suppression and other incident support activities. Topics include current safety training, relevant policy and procedures, how to recognize and mitigate risk, and maintain safe and effective practices while working under agency supervision on an incident. Upon successful completion of training, participants will receive a course completion card valid for one (1) year from date of issue.

**Prerequisites:** None

**Certification:** None

**Max Class Size:** 40

**Restrictions:** 5:1 student/skills evaluator ratio for fire shelter deployment skill

**Training Expiration:** Valid for one (1) year from date of training

**Fireline Safety Awareness for Hired Vendors Course Syllabus**

**Course Objectives:** To provide the student with...

- Information on recent wildland events and hot topics
- Information for working on a wildland fire, including parts of a vegetation fire, situational awareness, fireline hazards, incident check-in, and radio procedures
- The 10 Standard Fire Orders and 18 Watch-out Situations
- Information on using the Incident Response Pocket Guide
- Techniques on the care, maintenance, and deployment of the new generation fire shelter
- Guidelines when working with California inmate fire crew

**Course Content:**

- Overview and Administration ............................................................ 8:00
- Introduction to the Incident Response Pocket Guide ............................. 0:15
- Parts of a Vegetation Fire ................................................................. 0:30
- Situational Awareness/ Look up-Look down/ Weather ............................ 0:45
- The 10 Standard Fire Orders/LCES ..................................................... 0:30
- The 18 Situations that Shout Watch Out ............................................ 0:30

January 2019 May 2015

Course: Incident Safety Awareness for Hired Vendors (2018)
Hours: 8

Designed For: Hired vendors working with the California Department of Forestry and Fire Prevention (CAL FIRE) or the United States Forest Service (USFS) on any active incident, including water tender operators, heavy equipment drivers or operators, crew bus drivers, vehicles with a driver, mechanics, fallers, and swampers.

Description: This course provides an awareness of fireline and incident safety to hired vendors who plan to engage in wildland fire suppression and other incident support activities. It includes an overview of hazards and safety issues, entrapment avoidance, incident organization, fire shelter deployment, and current issues.

Prerequisites: ICS-100 – Introduction to Incident Command System (recommended)
S-130 – Firefighter Training (recommended)
S-190 – Introduction to Wildland Fire Behavior (recommended)
L-180 – Human Factors in the Wildland Fire Service (recommended)

Max. Class Size: 40
Instructor/Student Ratio: 1/40 (Lecture)
1/5 (Fire Shelter Activity – See Personnel Requirements)

Restrictions: Course completion card is valid for one year from date of issue

*This is an abbreviated Course Plan. Terminal & Enabling Objectives can be found on the full version located on the SFT Curriculum page of the SFT website at: http://osfm.fire.ca.gov/training/SFTCurriculum.php

Hours: 8

Designed For: Fire fighters, fire service personnel, animal control officers, and law enforcement officers

Description: Fire departments are beginning to play a vital role in large animal rescues. Moreover, since these rescues can be a hazardous activity and pose a risk of serious injury or death, the safety of rescuers must be the first priority. This course provides the knowledge and skills necessary so responders can work in "concert" with each other, guided by an understanding of horse characteristics and behavior.

Prerequisites: None

Certification: None

Max Class Size: 25

Restrictions: This course requires a site with adequate materials and equipment to deliver the training according to the course outline.

LARGE ANIMAL RESCUE OPERATIONAL COURSE OUTLINE

Course Objectives: To provide the student with:

- Information about large animal rescue as a technical rescue.
- Information about prey animal behavior and characteristics.
- Information and training on emergency containment of large animals.
- Information and training on scene management and large animal operations.
- Information and training on large animal rescue equipment and application.
- Information and training on horse trailers and on-road accidents.
- Information and training on rope operations and large animals.
- Information and training on hauling, lifting, and lowering large animals.
- Information and training on vertical lifting operations with large animals.
- Information and training on water rescue with large animals.

Course Content ................................................................................................. 8:00

Unit 1: Introduction to Large Animal Rescue

Introduction and History ..................................................................................... 0:30
Horse Characteristics and Behavior ..................................................................... 0:30
The Emergency Rope Halter and Lead Line ........................................................... 0:30
How to Approach a Loose Horse ......................................................................... 0:15

Course Review and Final Exam ................................................................. 1:00
**Course Information and Required Materials**

**January 2019 - May 2015**

**Course:** Low Angle Rope Rescue Operational (2007)
**Hours:** 24
**Designed For:** All fire service personnel
**Description:** Designed to equip the student with the techniques and methods for using rope, webbing, hardware friction devices, litters in low angle rescue situations. Areas covered include rope and related equipment, anchor systems, safety lines, stretcher lashing and rigging, mechanical advantage systems, and single-line and two-line rescue systems.
**Prerequisites:** None
**Certification:** None
**Max Class Size:** Student/Instructor ratio is 12:1 (48 student’s maximum with four Primary Instructors)
**Restrictions:** This course requires a site with adequate materials and equipment to deliver the training according to the course outline.

### LOW ANGLE ROPE RESCUE OPERATIONAL COURSE OUTLINE

Course Objectives: To provide the student with...

- Information on rope rescue equipment, rescue knots and hitches, anchor systems, system attachments and fall restraint, belay/safety line systems, load-releasing devices.
- Methods and techniques used to inspect and maintain rescue rope, webbing, and hardware.
- Methods and techniques to tie knots and package victims and rescuers.
- Methods and techniques for using rescue equipment to build lower/raise systems.
- Information on rescue scene organization and management.
- An opportunity to demonstrate and apply basic low angle rope rescue techniques.
- Optional information on litter walkouts and ladder systems used in low angle rope rescue operations.

Evolutions......................................................................................................................... 5:00
Evolutions (Optional) ........................................................................................................ 5:00
Course: Motion Picture/Television – Fire Safety Officer (2012)

Hours: 24

Designed For: Fire prevention, suppression and investigation officers, special effects technicians, film production safety coordinators, stunt coordinators, line producers, directors, location managers, film commissioners, insurance risk managers and other governmental officials who interact with the entertainment industry in a safety capacity.

Description: This course provides the student with a basic knowledge of film production fire safety, both on the studio lot and location filming. Areas covered include: filming and fire code permits, licensing, safety officer responsibilities, who's who on location, fire safety hazards associated with lighting, generators, electrical cabling, set construction, studio and warehouse filming, pyrotechnic special effects laws and regulations (handling, use, storage and transportation) and stunt safety.

In addition, the training incorporates live pyrotechnic special effects and stunt demonstrations, special guest speakers, product orientation and slides and videos from many different films.

Prerequisites: None

Max. Class Size: 75

Restrictions: This course is scheduled and taught by OSFM Fire Engineering – Fireworks Program staff experienced with Motion Picture/Television only.

OSFM Fire Engineering – Motion Picture & Entertainment Safety

MOTION PICTURE/TELEVISION – FIRE SAFETY OFFICER COURSE PLAN

Course Objectives:

- Provide students with the knowledge, skills and abilities to recognize common and special hazards in the filming industry and enforce fire prevention laws and regulations while assigned to filming locations.
- Provide students with information about the role of the fire department while assigned to filming locations.
- Provide a level of enforcement consistency from jurisdiction to jurisdiction when assigned to filming locations.
- Provide the Filming Industry and the People of the State a safe environment when production companies are filming on location.

Day 1:

Orientation and Introduction ...1:00
Filming in California ...1:00
Film Production Safety ...1:00

Course Information and Required Materials

Course: Open Water Rescuer – Basic (2014)
Hours: 24
Designed For: Rescue / Firefighting
Description: This course provides detailed information, and the skills training required, to improve an individual’s level of comfort and confidence for safely and proficiently performing contact rescues in static and surf water conditions. Safety is strongly emphasized throughout the class. Risk management is reinforced during every skill to establish your level of comfort in the water and to identify and overcome your limitations. The emphasis on risk management helps you determine if your actions meet your agencies SOPS/SOGS in the determination of a rescue being a “offensive” or “defensive” operation. Swimming, stroke technique and body positioning in the water are covered. “In water” skills for students include how to read and understand water flow, reading and understanding surf, contact rescues using rescue buoy devices and boards, dealing with combatant victims, performing self-rescues, and rescues of multiple victims both conscious and unconscious. The entire course meets the requirements of swimming contact rescue of NFPA 1670 and NFPA 1006 Chapter 11, sections 11.2, Chapter 15, sections 15.2.

Prerequisites: It is recommended that the AHJ devise or adopt a minimum swim capability standard based on the response area needs. A realistic evaluation of the rescuer’s water survival skills should be conducted by the AHJ to meet this requirement. It is recommended that the AHJ use an annual swim test standard that meets or exceeds the International Association of Dive Rescue Specialists (IADRS) Annual Watermanship Test.

Certification: None
Standard: 80%
Class Size: 32 participants maximum, 8:1 student/instructor ratio
Restrictions: This course requires appropriate fitness and ability to complete the AHJ swim standard or the recommended NFPA, IARDS Watermanship swim test.

### REQUIRED STUDENT MATERIALS

- **USLA Open Water Rescue Manual**
  - Edition: 2011
  - Vendors: Various

### REQUIRED INSTRUCTOR MATERIALS

- **USLA Open Water Rescue Manual**
  - Edition: 2011
  - Vendors: Various
- **One Rescue Tube for every 4 students**
  - Vendors: Various
- **One Rescue Can for every 4 students**

**OPEN WATER RESCUER COURSE PLAN**

**Day One:**
- Topic 1-1 Course Introduction, Instructor and Student Introduction ........................................... 00:15
  - Terminal Learning Objective (TLO): With the instruction provided in this topic the student will, with a high degree of accuracy, be familiar with course administration and operational requirements for successful completion.
  - Enabling Learning Objectives (ELO): -
    1. Describe starting times and attendance requirements for successful completion of the course.
    2. Describe the necessary paperwork to complete all administrative processes required for successful completion.
    3. Describe the criteria for successful completion of the course.
    4. Obtain and learn the student manual and its contents as it pertains to this course.

**Topic 7-1 Communication and Hand Signals .......................................................... 00:15**

**Topic 8-1 Conducting a Witness Interview .......................................................... 00:30**

**Topic 9-1 Swimming Ability .................................................................................. 01:00**

**Topic 10-1 Methods of Reading and Entering the Water ........................................... 01:30**

**Topic 11-1 Capabilities and Limitations of a Rescue Paddle Board .............................. 01:30**

**Day Two:**
- Topic 12-1 Approaching a Victim(s) / Escaping a panicked victim(s) ......................... 02:00
- Topic 13-1 Performing Rescues with a Rescue Tube .................................................. 02:00
- Topic 14-1 Performing Rescues with a Rescue Can .................................................... 02:00
- Topic 15-1 Performing a Subsurface Rescue .............................................................. 02:00

**Day Three:**
- Topic 16-1 Incident Command System (ICS) for Water Rescue ............................... 00:30
- Topic 17-1 Familiarization of Operations Around Helicopters .................................. 00:30
- Topic 18-1 Reduced Visibility Responses .................................................................. 00:30
- Topic 19-1 Rescue from a Boat, Pier, Rock, Cave, Kelp Bed ..................................... 02:00
- Topic 20-1 Deployment and Retrieval of Open Water Rescuer to a Watercraft, Boat .... 02:00
- Topic 21-1 Distressed Swimmer Rescue Scenario ...................................................... 01:15
- Topic 22-1 Distressed Victim(s) from a Disabled Watercraft Rescue Scenario .......... 01:15

**Texts and References**
- U.S. Coast Guard Helicopter Rescue Swimmer Manual
- U.S. Navy Seal Rescue Swimmer Manual
- NFPA 1670 Standards on Operation and Training for Technical Rescue Incidents
- NFPA 1006 Standard for Technical Rescuer Professional Qualifications

**Course Hours ............................................................................................................. 24:00**

*This is an abbreviated Course Plan. Terminal and Enabling Learning Objectives can be found on the full version located on the SFT Curriculum page of the SFT website at: http://osfm.fire.ca.gov/training/SFTCurriculum.php*
OPEN WATER RESCUE COURSE PLAN

Topic 2-1 Philosophy and Duties of the Open Water Rescuer / NFPA 1006..................................................00:30

Terminal Learning Objective (TLO): With the instruction provided in this topic the student will, with a high degree of accuracy, understand the need, perception and duties of the open water rescuer and how all duties relate to NFPA 1006.

Enabling Learning Objectives (ELO):
1. Understand the physical conditioning need of an open water rescuer, routine physical training and meeting swim and skill standards annually.
2. Understand and describe why water rescue starts with prevention education.
3. Understand the perception the general public has of search and open water rescuers and our responsibility to that idea.
4. Understand how the skills and knowledge learned relate to the JPR’s of NFPA 1006 Chapters 11 and 15.
5. Understand the need for contact rescues.
6. Understand the difference between an Open Water Rescuer and a Lifeguard.
7. Recognize the disadvantages of a Open water rescuer i.e. dependent on someone else’s recognition, advanced stages of rescue event, no back-up resources.

Topic 3-1 Environmental Risk Assessment/ PPE...........................................................................................................01:00

Terminal Learning Objective (TLO): With the instruction provided in this topic the student will, with a high degree of accuracy, be able to determine by reading the water, environmental conditions, marine life, agency SOPS/SOGS to perform an offensive or defensive rescue using the proper PPE for the conditions.

Enabling Learning Objectives (ELO):
1. Understand the forces of wind, water, temperature and current.
2. Describe these forces and their outcome when one or more are combined.
3. Develop an understanding of the way water acts around obstacles in the water.
4. Understand and relate the escalation of risks i.e. talk, reach, throw, row, wade, go & tow
5. Know their limitations in all facets of contact rescue swimming.
6. Determine the factors that can change an offensive rescue to a defensive rescue.
7. Understand the ability of additional equipment to perform a contact swimming rescue.
8. Describe the proper protective equipment required for the environmental conditions.

Topic 4-1 Victim Recognition and Assessment.............................................................................................................00:30

Terminal Learning Objective (TLO): With the instruction provided in this topic the student will, with a high degree of accuracy, be able to identify signs that may help to indicate various drowning presentations.

Enabling Learning Objectives (ELO): The student will:
— 1. Understand observations made of swimmers while still on dry land.
— 2. Understand through sight, the abilities of potential swimmers before they enter into the water.
— 3. Understand through behavior, the abilities of potential swimmers before they enter into the water.
— 4. Understand, by the conditions of the water, the threat to potential and actual swimmers.
— 5. Understand, by weather conditions, the threat to potential and actual swimmers.
— 6. Understand, by watching a person enter into the water, their comfort level with the water.
— 7. Understand, by watching a person’s swimming abilities, their chance of success while in the water.

Topic 5-1 Recognizing the Distressed Signs of a Swimmer.........................................................................................00:30

Terminal Learning Objective (TLO): With the instruction provided in this topic the student will, with a high degree of accuracy, understand and describe the high-risk groups that enter the water. They will
be able to identify what the drowning process looks like and what is going on in the drowning persons mind as well as, describe what is going on physiologically inside the drowning person's body.

**Enabling Learning Objectives (ELO):** The student will:

1. Describe the high risks groups of drowning and the stimulus of the swimmer and non-swimmer
2. Describe the observation of a swimmer with their head low in the water.
3. Describe the observation of a swimmer with an up and down stroke.
4. Describe the observation of a swimmer with no leg kick.
5. Describe the observation of a swimmer allowing waves to break over them.
6. Describe the observation of a swimmer with hair in their face.
7. Describe the observation of a swimmer with glassy eyes, or a far-away stare.
8. Describe the observation of a swimmer with their head low in the water.
9. Describe the process of secondary drowning, or second day drowning, parking lot drowning.
10. Describe the affects and differences between warm water and cold water drowning.

**Topic 6**

**Terminal Learning Objective (TLO):** With the instruction provided in this topic the student will, with a high degree of accuracy, learn the components of a swimming rescue and the importance of each component being followed and successfully completed.

**Enabling Learning Objectives (ELO):**

1. Identify and correctly recite the components of a contact swimming rescue.
2. Describe the reason and meaning behind the Recognize component.
3. Describe the reason and meaning behind the Respond component.
4. Describe the reason and meaning behind the Contact and Control component.
5. Describe the reason and meaning behind the Signal and Save component.
6. Describe why the order of these components are important and why one component must be completed before moving onto the next one.

**Topic 7**

**Terminal Learning Objective (TLO):** With the instruction provided in this topic the student will, with a high degree of accuracy, comprehend and understand the value of proper communication by both receiving and relaying proper terminology during water rescue operations. Student will learn and memorize the industry standard hand signals used during contact rescue swimming.

**Enabling Learning Objectives (ELO):**

1. Comprehend and recite the proper terminology of all the equipment used by a open water rescuer.
2. Comprehend and recite the duties of the open water rescuer and how they fall into line during a water rescue operation.
3. Describe the different options of communication a open water rescuer can use.
4. Memorize and display the industry standard (USLA) hand signals used for communication between team members on shore and in the water.
5. Explain when to use hand signals and their importance.

**Topic 8**

**Terminal Learning Objective (TLO):** With the instruction provided in this topic the student will, with a high degree of accuracy, will describe and understand the proper procedure and questions when conducting a witness interview, the reason for the interview, and the reason for empathy and honesty during the interview.

**Enabling Learning Objectives (ELO):**

1. Understand the information needed from the witness to better perform a successful rescue. Who, what, where, when, why and how many.
OPEN WATER RESCUE COURSE PLAN

2. Learn the questions required to ask of the witness to obtain the needed information.
3. Describe the demeanor/empathy to have when speaking with the witness.
4. Know the forms to use and how to fill out when speaking with the witness.
5. Describe the reason to express honesty to the witness during the witness interview.
6. Explain the reason to keep the witness nearby during the search part of the rescue.
7. Explain drowning support groups available to them to participate with on line.

Topic 9-1 Swimming Ability.................................................................01:00

Terminal Learning Objective (TLO): A realistic evaluation of the rescuer’s water survival skills should be conducted by the AHJ to meet this requirement annually. It is recommended that the AHJ use an annual swim test that meets or exceeds the IADRS Annual Watermanship Test. Example: Swim 91.4 m (100 yards) unassisted with any stroke, no time limit, and tread water for 10 minutes. The student shall successfully complete a show of watermanship skills that the AHJ has devised or adopted as a minimum swim capability based on their response area needs. If the AHJ has not devised a swim test, the NFPA recommended IADRS watermanship skills test will be performed. Swim test will be conducted in a measured open water course or a pool.

Enabling Learning Objectives (ELO):
1. The student will understand the start and successful completion parameters of the swim.
2. Enter the water wearing the PPE desired for warmth during the swim, no swimming aids allowed.
3. Wade or dolphin out to water deep enough to swim without touching bottom.
4. Perform the watermanship skills test as required by the AHJ or IADRS test form.
5. Upon completion of the 500 meter swim, remove yourself from the swim area and rest.
6. Remain in the general area, on shore, until all students have completed the swim.
7. Immediately inform an instructor if medical or physical problems are encountered.
8. Examine stroke technique; employ improvement points provided by instructors.

Topic 10-1 Methods of Reading and Entering the Water.........................................................01:30

Terminal Learning Objective (TLO): With the instruction provided in this topic the student will, with a high degree of accuracy, describe the characteristics of the water and the way it moves and what is causing it to move as it pertains to the needs of the open water rescuer, the importance of reading water properly and what is gained when proper reading of the water is accomplished.

Enabling Learning Objectives (ELO):
1. Read the water correctly describing what is causing the movement of the water.
2. Describe what happens when moving water comes in contact with an obstacle in the water.
3. Describe what produces waves, how they are formed, how they lift and how they break and why.
4. Describe the energy that travels through water and how it affects the water.
5. Describe why wave energy moves through the water in a beach break.
6. Describe why wave energy is stationary in moving water.
7. Describe what happens when moving water comes in contact with slower moving or still water.
8. Describe how water wants to maintain an equal balance and what is formed because of this physical trait.
9. Describe how water erodes away at stationary objects and deposits the erosion in a different location.
10. Describe the procedure of reading the characteristics of the water by reading the geology of the surrounding land.
11. Describe the safety hazards when entering into unfamiliar water.
12. Dolphining technique.
13. Perform the proper entry from an elevated platform.
14. Perform the proper entry from a boat.
Topic 11-1 Capabilities and Limitations of a Rescue Paddle Board.........................................................01:30

Terminal Learning Objective (TLO): With the instruction provided in this topic the student will, with a high degree of accuracy, describe how to properly store the rescue paddle board for immediate rescue needs. Describe and demonstrate the proper way to lift and carry the rescue paddle board to the water and when to mount the board. Describe and demonstrate the proper stroke to use to paddle and maneuver the rescue paddle board.

Enabling Learning Objectives (ELO):
1. Describe and demonstrate the proper way to ready the rescue paddle board for rescue use.
2. Describe and demonstrate the proper way to lift and carry the rescue paddle board as you head toward the water line.
3. Describe and demonstrate the proper position of the board when entering the water and the proper depth to mount the board in the prone position to start paddling.
4. Describe and demonstrate the proper position of the board and water conditions to move from the prone position to your knees and continue paddling.
5. Describe and demonstrate the proper stroke to use to move the board in the desired direction and how to make small maneuvers of the board while traveling forward.
6. Describe and demonstrate the proper method to turn Rescue Paddle Board greater than 45 degrees.
7. Describe and demonstrate the proper way to approach the distressed swimmer in the water and the position of the board.
8. Describe and demonstrate the proper actions if the distressed swimmer attempts to attack you while performing the rescue.
9. Describe and demonstrate the proper actions if the distressed swimmer has made physical contact with you to use you as a floatation device.
10. Describe and demonstrate the proper actions for placing a conscious swimmer onto the board.
11. Describe and demonstrate the proper actions for placing an unconscious swimmer onto the board.
12. Describe and demonstrate the proper open water rescuers position on the board to paddle the swimmer to safety.
13. Describe and demonstrate properly paddling the board in while maintaining communication and observation of the distressed swimmer.
14. Describe and demonstrate the proper way to push through a breaking wave with a distressed swimmer on the board.
15. Describe and demonstrate the proper way to remove and protect the distressed swimmer from the board while in a breaking wave.
16. Describe and demonstrate assisting the distressed swimmer into shore while watching the water conditions.
17. Describe and demonstrate the proper transfer of the distressed swimmer to EMS with a report of your actions and findings.

Day Two:
Topic 12-1 Approaching a Victim(s) / Escaping a panicked victim(s)......................................................02:00

Terminal Learning Objective (TLO): With the instruction provided in this topic the student will, with a high degree of accuracy, properly approach a victim and observe the victims condition. The student will demonstrate how to safely evade a panicked victim until the victim can be safely secured and re-approached for a contact rescue.

Enabling Learning Objectives (ELO):
1. Demonstrate the proper swim to maintain visual contact with the victim(s).
2. Demonstrate the proper distance to stop from the victim to make communication and avoid attack of a
Topic 13-1 Performing Rescues with a Rescue Tube………………………………………….…………………02:00
Terminal Learning Objective (TLO): With the instruction provided in this topic the student will, with a high degree of accuracy, properly ready a rescue tube for stand by and rescue use. Perform a contact rescue by properly using the rescue tube as the flotation and tether device for the victim.

Enabling Learning Objectives (ELO):
1. Describe and demonstrate properly securing the tether of the rescue tube around the rescue tube into the stand by position.
2. Describe and demonstrate properly removing the rescue tube from the stand by position placing the tether around your head and over your strong shoulder when in knee deep water.
3. Describe and demonstrate the desired head up stoke out to the distressed swimmer and properly evaluate the swimmer.
4. Describe and demonstrate your actions and perform them to the distressed swimmer as you introduce the rescue tube.
5. Inform the distressed swimmer to turn 180 degrees and properly secure the rescue tube around the distressed swimmer.
6. Describe and demonstrate the proper actions if the distressed swimmer attempts to attack you or climbs your tether while performing the rescue.
7. Describe and demonstrate the proper actions of escapes if the distressed swimmer has made physical contact with you to use you as a floatation device.
8. Describe and demonstrate swimming the distressed swimmer to safety maintaining communication and observation of the distressed swimmer.
9. Describe and demonstrate properly assisting the distressed swimmer into shore while watching the water conditions and communicating with victim.
10. Describe and demonstrate properly transferring the distressed swimmer over to EMS with a report of your actions and findings.

Topic 14-1 Performing Rescues with a Rescue Can……………………………………..………………………02:00
Terminal Learning Objective (TLO): With the instruction provided in this topic the student will, with a high degree of accuracy, properly ready a rescue can for stand by and rescue use. Perform a contact rescue by properly using the rescue can as the flotation and tether device.

Enabling Learning Objectives (ELO):
1. Describe and demonstrate properly securing the tether of the rescue can around the rescue can into the stand by position.
2. Describe and demonstrate properly removing the rescue can from the stand by position placing the tether around your head and over your strong shoulder when in knee deep water.
3. Describe and demonstrate the desired stoke out to the distressed swimmer and properly evaluate the swimmer.
4. Describe and demonstrate your actions and perform them to the distressed swimmer as you introduce the rescue can.
5. Inform the distressed swimmer to grip the rescue can handles or to pull the rescue can into their stomach and lay across it.
OPEN WATER RESCUE COURSE PLAN

6. Describe and demonstrate the proper actions if the distressed swimmer attempts to attack you while performing the rescue.

7. Describe and demonstrate the proper actions if the distressed swimmer has made physical contact with you to use you as a floatation device.

8. Describe and demonstrate properly swimming the distressed swimmer to safety maintaining communication and observation of the distressed swimmer.

9. Describe and demonstrate properly assisting the distressed swimmer into shore while watching the water conditions.

10. Describe and demonstrate properly transferring the swimmer over to EMS with a report of your actions and findings.

Topic 15-1 Performing a Subsurface Rescue

Terminal Learning Objective (TLO): With the instruction provided in this topic the student will, with a high degree of accuracy, will demonstrate a high degree of comfort while below the surface of the water. The student will swim to a submerged victim, make contact with the victim(s) and bring the victim(s) to the surface of the water using given means available. The student will swim the victim to shore or if a rescue craft is available and is closer, to a rescue craft and assist in loading the victim(s) into/onto the craft/sled. Sub-surface water rescue is an existence of an IDLH atmosphere defined as an atmospheric concentration of any toxic, corrosive or asphyxiant substance that poses an immediate threat to life or would cause irreversible or delayed adverse health effects or would interfere with an individual’s ability to escape from a dangerous atmosphere. [29 CFR* 1910.120]

Enabling Learning Objectives (ELO):

1. The student will swim to the area the victim(s) was last seen.
2. The student will make visual contact of a victim a minimum of 10 feet and a maximum of 12 feet below the surface of the water. If the water is opaque a buoy can be used to make the area of the victim.
3. The student will perform a size up and determine a rescue plan.
4. The student will communicate the rescue plan with the crew of the rescue craft.
5. The student will, dive below the surface make contact with the victim.
6. Using their hands or a given device, the student will securely swim the victim to the surface.
7. The student will assure that the victims’ airway is out of the water.
8. The student will swim the victim over to the rescue craft and assist in loading the victim into/onto the craft/sled.

Day Three:

Topic 16-1 Incident Command System (ICS) for Water Rescue

Terminal Learning Objective (TLO): With the instruction provided in this topic the student will, with a high degree of accuracy, demonstrate an understanding of the Incident Command System (ICS) and the need for the use of the ICS system during water rescue incidents. The student will start building the ICS upon dispatch and become familiar with Incident Command terminology, positions within ICS and apply this knowledge to the open water rescue emergency.

Enabling Learning Objectives (ELO):

1. Describe the difference between a division and a group.
2. Describe Unity of Command and how it benefits the water rescue operations.
3. Describe Span of Control
4. Describe Delegation of Authority
5. Describe the staff positions of the Incident Command System
6. Describe Incident Site Management
7. Recite the positions of an incident site for water rescue operations
OPEN WATER RESCUE COURSE PLAN

8. Describe the resources available for a water rescue incident and why they would be called.
9. Describe the zones that can be set up for the water rescue incident and the area of each zone.
10. Describe what form 214 is, when it’s used and the information needed to fill one out.

Topic 17-1 Familiarization of Operations Around Helicopters
Terminal Learning Objective (TLO): With the instruction provided in this topic the student will, with a high degree of accuracy, be familiarized with the dangers and situations of using a helicopter in a water rescue scenario.

Enabling Learning Objectives (ELO):
1. Become familiar with industry terminology of helicopter crew members when using the helicopter for water-rescue operations.
2. Describe and discuss the difference between a static and a hoist line.
3. Describe the proper way to approach and leave the area of the helicopter.
4. Describe the proper way to enter and exit the helicopter and under who’s permission.
5. Describe the requirements of the landing zone and how to prepare a landing zone.

Topic 18-1 Reduced Visibility Responses
Terminal Learning Objective (TLO): With the instruction provided in this topic the student will, with a high degree of accuracy, understand the dangers and situations of night operations, reduced visibility by fog, storms or rain, agency SOPS/SOGS, when to go or say “This is beyond your limitations/abilities.”

Enabling Learning Objectives (ELO):
1. Describe the hazards when attempting night or low visibility responses.
2. Describe the limitations of the open water rescuer during night or low visibility responses.
3. Describe the hazards during storms.
4. Understand the different expenditure of energy when operating at night or low visibility.
5. Describe the different PPE required during night or low visibility responses.
6. Describe the different resources required during night or low visibility responses.
7. Describe the different communication required during night or low visibility responses.

Topic 19-1 Rescue from a Boat, Pier, Rock, Cave, Kelp Beds
Terminal Learning Objective (TLO): With the instruction provided in this topic the student will, with a high degree of accuracy, demonstrate their ability to read the water around obstacles in the water and why the water behaves the way it does when in contact or around the object. The student will take into account depth, current, distance, sub-surface obstacles, wave action, while setting up a safe plan to perform a contact rescue. The student will enter the water from an obstacle and successfully perform a contact rescue.

Enabling Learning Objectives (ELO):
1. The student will position themselves near to the area of the victim(s).
2. The student will attempt to make visual contact of a victim(s).
3. The student will perform a size up and determine a rescue plan.
4. The student will communicate the rescue plan with the crew if on a rescue craft.
5. The student will understand the energy of the movement of the water they will be entering into and pre-determine their movement once they enter into the water.
6. The student shall read their flotation rescue.
7. The student shall determine to jump, slide or step and safely enter into the water.
8. The student will swim the most direct path to the victim considering the movement and current of water along with other obstacles to reach the victim(s).
9. The student shall perform a successful contact rescue.
10. The student will assure that the victim(s)’ airway is out of the water.
11. The student will swim the victim to a point of safety and assist in removing the victim(s) from the water.

Topic 20-1 Deployment and Retrieval of Open Water Rescuer to a Watercraft, Boat

Terminal Learning Objective (TLO): With the instruction provided in this topic the student will, with a high degree of accuracy, recognize the hazards during deployment and retrieval from watercraft. Students will gain an understanding of extended rescue capabilities and the associated limitations with the introduction of watercraft.

Enabling Learning Objectives (ELO):
1. Students will discuss the complexities of introducing a motorized method of delivery of Open water rescuer services to a rescue scenario.
2. The capabilities and limitations of each motorized method of delivery will be evaluated.
3. Each student will be exposed to the outcome of mechanical failure of the watercraft after deployment has been completed.
4. Students will develop an understanding of who is responsible for their deployment, its location and timing.
5. Upon making entry the Open water rescuer will provide hand signals to the craft operator of their status i.e., Ok, assistance needed or abort mission.
6. While in the water, Open water rescuer will act as his/her own Incident Unit controller reporting to Incident Command (IC).
7. Once assessment is complete, and contact rescue is secure; Open water rescuer will communicate with craft operator for pick-up.
8. Open water rescuer will package and deliver victim(s) to the motorized craft remaining vigilant of his/her safety and the outcome of the crafts mechanical failure.
9. Open water rescuer will be the last to board the craft, ensuring the safety of victim(s) and craft crew.
10. Once back under the care and control of the craft operator, the Open water rescuer will return to be a part of the boat crew within the Incident Command structure.

Topic 21-1 Distressed Swimmer Rescue Scenario

Terminal Learning Objective (TLO): With the instruction provided in this topic the student will, with a high degree of accuracy, work together as a team, building on their personal and independent capabilities and limitations. Students will utilize the incident command system and delegate positions with tactical objectives to systematically actualize a plan for a successful rescue.

Enabling Learning Objectives (ELO):
1. The students will receive a scenario of a single distressed swimmer needing rescue and their immediate resources.
2. The students shall agree on one student becoming the Incident Commander (IC).
3. The student as IC shall set up command assign other students to positions and delegate authority as needed.
4. The student will, through the use of radios, hand signals and speaking, communicate all actions to the IC or their designee.
5. The student will use the training and skills they have obtained over the last two days to perform the rescue of the single distressed swimmer.
6. The scenario ends when the swimmer is handed off to EMS and all students involved in the scenario have been accounted for.

Topic 22-1 Distressed Victim(s) from a Disabled Watercraft Rescue Scenario
OPEN WATER RESCUE COURSE PLAN

Terminal Learning Objective (TLO): With the instruction provided in this topic the student will, with a high degree of accuracy, work together as a team, building on their personal and independent capabilities and limitations. Students will utilize the incident command system and delegate positions with tactical objectives to systematically actualize a plan for a successful rescue.

—Enabling Learning Objectives (ELO):

1. Each student will evaluate the effectiveness, risks and alternatives for rescuing the passengers of a disabled watercraft.
2. Close consideration will be applied to each situation in order to protect the lives and safety of rescuers and the passengers of the watercraft.
3. Clear and simple instructions will be communicated to the passengers to don Personal Floatation Devices (PFDs).
4. Open water rescuers will account for the number of person’s onboard (POB), their ages, medical conditions. The increased risk to all parties in the event abandoning ship or remaining onboard is called for will be evaluated.
5. The choice to direct passengers to abandon ship will take into account for rapidly evolving and increasing hazards to staying onboard the craft i.e. surf, currents and/or especially hazardous conditions of the boat such as fuel in the bilges, flooding, fire or any other hazard(s).
6. Having the passengers remain onboard the craft will be taken into consideration. The crafts operator will be required to turn engine(s) off and show the keys to the Open water rescuer prior to the swimmer approaching.
7. Students will demonstrate their understanding of options for attaching to the disabled watercraft.
8. Students will demonstrated their ability to tow and maneuver the disabled craft under swimming power-alone as a solo swimmer.
9. Students will demonstrate their understanding of the option to introduce other Open water rescuers, work in cooperation and in tandem to tow and maneuver the disabled watercraft.
10. Open water rescuer(s) will work in tandem to reduce vessels rate of drift, hold station, or pull the boat to a safe location under their own power.
11. The student will perform all skills using the utmost safety while performing the skills.
12. The scenario ends when all distressed rescued victims are handed off to EMS and all students involved in the scenario have been accounted for.

### PERSONAL WATERCRAFT RESCUE OPERATIONS COURSE OUTLINE

Course Objectives: To provide the student with...

- Information on the codes and regulations that impact personal watercraft operations.
- A thorough knowledge of personal watercraft operations.
- A strong working knowledge of personal watercraft operations in both static and dynamic water.
- Information on performing inspections and maintaining personal watercraft.
- An opportunity to apply their knowledge through demonstrations.

Course Information and Required Materials

Course: Photovoltaic Training (2010)

Hours: 8

Designed For: All fire service personnel

Description: This course is designed specifically to provide fire protection and fire prevention personnel with background information regarding photovoltaic technology so that they can make informed decisions at the scene of an emergency or in the plan review and construction inspection of photovoltaic system installation.

Prerequisites: None

Certification: None

Standard: OSFM (2010); Fire Operations for Photovoltaic Emergencies Handbook

Max. Class Size: 30

Restrictions: None

Required Student Materials:
- Fire Operations for Photovoltaic Emergencies Handbook 2010
  Vendors: SFT Website

Required Instructor Materials:
- Fire Operations for Photovoltaic Emergencies Handbook 2010
  Vendors: SFT Website

Vendors:
SFT Website

PHOTOVOLTAIC COURSE OUTLINE*

Course Objectives:
- Have a working knowledge of a Photovoltaic System
- Be able to identify component parts of a Photovoltaic System
- Identify and mitigate potential hazards
- Identify occupancies and locations for Photovoltaic Systems
- Perform size-up and develop response strategies and tactics

Unit 1: Course Introduction ................................................................. 0:30
Unit 2: Photovoltaic History, Distribution and regulation ................................................................. 1:00
Unit 3: Photovoltaic Components; Modules, Wiring and Inverters ......................................................... 1:00
Unit 4: Photovoltaic Operation and Tactical Considerations ................................................................. 2:00
Unit 5: Residential and Suburban Applications ................................................................. 1:00
Unit 6: Large and Small Commercial Applications ................................................................. 1:00
Unit 7: Battery Hazards for Off-Grid Systems ................................................................. 1:00
Unit 8: Photovoltaic Technologies Underdevelopment ................................................................. 0:30

Course Hours ......................................................................................................................... 8:00

*This is an abbreviated Course Plan. Terminal & Enabling Learning Objectives can be found on the full version located on the SFT Curriculum page of the SFT website at:

Course Information and Required Materials

January 2019 May 2015

Course: RIC Operations (2011)
Hours: 24
Designed For: All fire service personnel
Description: The Rapid Intervention Crew Operations course trains fire fighters to rescue a downed fire fighter in an immediately dangerous to life and health environment in the continuing effort to reduce the number of fire fighter injuries and deaths that occur regularly. Students train using evolutions and scenarios based off tragedies suffered by fellow fire fighters from departments across the country. Students receive information on how to locate and use these LODD studies as training and prevention tools throughout their careers.

The course focuses on the three phases of a RIC operation: 1) predeployment, 2) deployment, and 3) rescue. During the class, you will also gain a greater understanding of RIC operations terminology and the RIC mindset.

Prerequisites: Fire Fighter I training, Fire Fighter Survival or IAFF course Fire Ground Survival.
Certification: None
Max Class Size: Student/Instructor ratio is 10:1 (40 student’s maximum, with four Primary Instructors)
Restrictions: This course requires a site with adequate materials and equipment to deliver the training according to the course outline.

SFT State Fire Training [http://osfm.fire.ca.gov/training/SFTCurriculum.php](http://osfm.fire.ca.gov/training/SFTCurriculum.php)

RIC Operations Course Outline

Course Objectives: To provide the student with...
- Rapid intervention crew terminology.
- Fire fighter fatality case study recommendations to enhance rapid intervention crew training to handle fire fighter emergencies on the fireground.
- Techniques and training in developing the "RIC mindset" and steps taken before a RIC deployment occurs (predeployment) to increase the chances of a successful outcome.
- Techniques and training in conducting a RIC deployment, including search operations and thermal imaging.
- Techniques and training in conducting rescue operations once a downed fire fighter is located, including assessment and extrication from the structure.

Course Content

- Orientation And Administration. ................................................................. 1:00
- The RIC Mindset ......................................................................................... 0:45
- Predeployment Concepts ............................................................................ 0:45
- Deployment Concepts .................................................................................. 0:45
- Rescue Operations ....................................................................................... 0:45
- RIC Operation Skills .................................................................................. 12:00
- #1: Size-up and Assemble A Mobile Tool Cache
- #2: Downed Fire Fighter Assessment
- #3: RIC Air Delivery
- #4: Search Line Deployment
- #5: Dragging A Downed Fire Fighter, One Rescuer
- #6: Dragging A Downed Fire Fighter
- #7: Packaging And Moving A Downed Fire Fighter Utilizing Rescue Loops
- #8: Packaging And Moving A Downed Fire Fighter Utilizing A Drag Sled
- #9: Packaging And Moving A Downed Fire Fighter Utilizing A Mast
- #10: Dragging A Downed Fire Fighter Down Stairs
- #11: Dragging A Downed Fire Fighter Up Stairs
- #12: Feet-first Ladder Carry
- #13: Seated Ladder Carry With SCBA Removal
- #14: Head-first Ladder Carry
- #15: Rescue From A Confined Area
- #16: Rescuing A Conscious and Uninjured Fire Fighter Through The Floor – Hose Method
- #17: Rescuing A Conscious And Injured Fire Fighter Through the Floor – Hose Method
- #18: Rescuing An Unconscious Fire Fighter Through the Floor – Hose Method
- #19: Rescuing A Downed Fire Fighter Through The Floor – Rope Method

RIC Operations Evolutions .............................................................. 8:00
- #1: Pittsburg Evolution
- #2: Tarver Evolution
- #3 and #4: Scenario-based Site-specific Evolutions
Hours: 24
Designed For: Water rescue personnel
Description: This course provides the skills needed to operate a rescue boat and perform rescue in river and flood situations. Safety, course philosophy, and terminology are covered. "In water" experiences for students include how to read dynamics flow for safety travel, perform self-rescue and victim-rescue operations, along with executing pre/post-inspections of the PWC.
Prerequisites: River and Flood Water Rescue
Certification: None
Max Class Size: 25
Restrictions: This course requires a site with adequate materials and equipment to deliver the training according to the course outline.

### River and Flood Water Rescue Course Outline

Course Objectives: To provide the student with...
- Basic rescue techniques to water rescue problems.  
- Information on the special hazards and problems in swift water rescue.  
- Basic skills to make safe moving water rescues.  
- Skills in rope handling, rigging, and repelling.

Course Content ................................................................................................................. 16:00

- Introduction ..................................................................................................................... 0:30
- Cold Water Emersion, Hypothermia, and Mammalian Reflex ........................................ 0:30
- White Water Regarding Body Surfing, Boat Handling, and Shallow Water Crossing .......... 1:00
- Introduction to Vertical Rescue ......................................................................................... 1:00
- How to Tie Rescue Knots ................................................................................................. 1:00
- Field Exercises .................................................................................................................. 3:00
- Water Briefing ................................................................................................................... 0:30
- Field Exercises With the Tyrollian Line ............................................................................ 2:00
- Field Exercises With Water Crossing Techniques ............................................................ 2:00
- Waterside Briefing ............................................................................................................ 0:30
- Rescue Simulations ........................................................................................................... 4:00
Course Information and Required Materials

January 2019 May 2015

Hours: 6

Designed For: All fire service personnel
Description: This course provides information on the growing problem of scrap tire storage throughout California. Topics include: History, chemical compounds, sources of ignition, codes and regulations, ground rubber operations and hazards, pre-incident planning of outdoor tire storage yards, tire fire behavior, and hazardous materials response.

Prerequisites: None
Certification: None
Max. Class Size: 40
Restrictions: None

Required Student Materials
- Student Manual (included in Instructor Media Kit) 2004 SFT

Required Instructor Materials

Vendors
- SFT State Fire Training http://osfm.fire.ca.gov/training/SFTCurriculum.php

Tire Fire Prevention and Suppression Course Outline

Course Objectives: To provide the student with...
- Information on the background and history of the scrap tire industry.
- Information on chemical compounds used in tire manufacturing.
- Information on traditional sources of ignition.
- Information on the current codes and regulations.
- Information on ground rubber operations and hazards.
- Pre-incident planning of outdoor tire storage yards.
- Information on tire fire behavior.
- Information on hazardous materials response.

Course Content .......................................................... 6:00
- Introduction: Defining the Problem .......................................................... 0:30
- Tire History ......................................................................................... 0:30
- Tire Markets ...................................................................................... 0:30
- Tire Storage ....................................................................................... 0:30
- Sources of Ignition ............................................................................. 0:30
- Codes and Regulations ...................................................................... 1:00
- Ground Rubber ................................................................................ 0:30
- Preplanning ....................................................................................... 0:30
- Fire Behavior ..................................................................................... 0:30
- Hazardous Materials Response ....................................................... 1:00
Course: Trench Rescue

Hours: 16

Designed For: All fire service personnel

Description: This course is designed to train fire service personnel in hands-on application of the techniques necessary to safely affect a rescue from an excavation or trenching cave-in. Topics include: Critical considerations while responding to trenching emergencies, evaluation of cave-in scenes, basic life support procedures and temporary protection for victims, specialized tool usage, shoring techniques, and below grade rescue safety procedures.

Prerequisites: None

Certification: None

Max. Class Size: 40

Student/Instructor: Ratio: 10:1 (Skills Proficiency)

Restrictions: This course requires a site with adequate materials and equipment to deliver the training according to the course outline.

TRENCH RESCUE COURSE OUTLINE

Course Objectives: To provide the student with...

- Information on the common causes for trench collapse.
- Information on the personal safety equipment used for trench rescues.
- Techniques for using scene safety equipment.
- The procedures for placing edge protection to make the lip of the trench safe.
- The procedures for sheeting and shoring.
- Different methods for removing victims from a trench.
- Techniques for safely removing tools and equipment from a trench.
- An opportunity to demonstrate and apply trench rescue techniques.

Course Content ........................................................................................................................................................................ 16:00

- Introduction
- The Law
- Confined Space Regulations
- Soil Analysis
- Types of Trenches and Collapse Patterns
- Emergency Rescue
- Guide Making the Trench Safe
Course Information and Required Materials

Course: Vehicle Extrication (2015)

Hours: 24

Designed For: Fire service personnel

Description: This course provides the knowledge and skills to prepare a firefighter to extricate victim(s) from a common passenger vehicle in a safe and effective manner in accordance with AHJ policies and procedures.

Prerequisites: Firefighter I training (certification not required)
Public Safety First Aid and CPR (CA Health and Safety Code 1979.182)

Certification: None

Standard: Complete all activities and mandatory skills

Max. Class Size: 50

Student/Instructor Ratio: 50:1 (Lecture/Activities); 10:1 (Skills)

Restrictions: None

REQUIRED STUDENT MATERIALS

Course text is selected by instructor (could be either or both)

- Vehicle Extrication Levels I and II: Principles & Practice
  AND/OR Principles of Vehicle Extrication
  1st ed.
  JB

- Full structural personal protective equipment (including hand & eye protection)
  3rd or 4th ed.
  IFSTA

REQUIRED INSTRUCTOR MATERIALS

- Vehicle Extrication Levels I and II: Principles & Practice (& instructor tool kit)
  AND/OR Principles of Vehicle Extrication
  1st ed.
  JB

- Full structural personal protective equipment (including hand & eye protection)
  3rd or 4th ed.

VEHICLE EXTRICATION COURSE OUTLINE

Unit 1: Introduction

- Topic 1-1: Orientation and Administration

Unit 2: Vehicle Extrication

- Topic 2-1: Planning for and Sizing Up a Vehicle Incident
- Topic 2-2: Establishing Scene Safety Zones
- Topic 2-3: Establishing Fire Protections
- Topic 2-4: Stabilizing a Common Passenger Vehicle
- Topic 2-5: Isolating and Managing Energy Sources
- Topic 2-6: Determining Passenger Vehicle Access and Egress Points
- Topic 2-7: Creating Access and Egress Openings for Rescue
- Topic 2-8: Disentangling Victims
- Topic 2-9: Removing a Packaged Victim to a Safe Area
- Topic 2-10: Terminating a Vehicle Incident

ICS COURSES

Course: Advanced All-Hazards Incident Management – AAIM (2012)

Hours: 48

Designed For: National Incident Management System (NIMS) Type-I Command and General Staff

Description: All-hazards complex incident management training for Type-I incident management teams (IMT)

Certification: Not Applicable

Standard: 80%

Max. Class Size: Up to 48 participants (based on incident management teams of 10 to 12 people per team)

Restrictions: Venue shall have adequate classrooms, breakout rooms, and information technology capabilities according to course logistics plan to be approved in advance of the class by SFT staff.

ADVANCED ALL-HAZARDS INCIDENT MANAGEMENT COURSE OUTLINE

Unit 1  Course Introduction

Scope Statement: The Scope of this Unit is to provide a description and overview of the course, define TLO, define ELO and provide students with the course expectations and evaluation process. During this Unit, students will be introduced to the instructors, provide an introduction of themselves, and learn the layout of the classroom and facilities.

Unit 2  Agencies, Entities and Plans

...
ADVANCED ALL-HAZARDS INCIDENT MANAGEMENT COURSE OUTLINE

Scope Statement: The scope of this Unit will be to provide the student with information regarding: Agencies, entities, and plans that may need to be accessed and engaged in order to mitigate incidents. Agencies and entities may bring jurisdictional considerations, and resources which could be required to deal with incidents.

Unit 3 Command and Coordination ................................................................. 2:30
Scope Statement: Students will be provided information on the interactions that occur with IMT’s and various levels of coordinating and directing organizations which may be instituted at a higher level command authority. These organizations may occur at the Federal, State, and Local levels of government.

Unit 4 Scenario - Transportation ..................................................................... 8:00
Scope Statement: This will be a five to six hour exercise that will allow the students to utilize lessons learned in previous Units. The IMT’s will develop a plan and provide solutions to a transportation scenario provided by the instructional staff. The intent of this scenario is to utilize tools that have been provided to demonstrate an ability to coordinate with agencies at the Federal, State, and Local levels.

Unit 5 Safe Management of Incident Resources ............................................. 2:30
Scope Statement: The scope of this Unit includes tools and information that IMT's can utilize to identify and mitigate safety issues. Students will learn to address long duration assignments, tragedy and high stress situations. The team will be provided information to form a basis for making sound decisions to conduct safe incident operations.

Unit 6 Incident management Team Challenges .............................................. 3:00
Scope Statement: In this Unit, teams will be provided with information to identify challenges that can impact a team and potential strategies to address them.

Unit 7 Incident Management Assistance Team (IMAT) .................................. 2:00
Scope Statement: IMAT’s are quite often called upon to assist and instruct other agencies in the management of incidents under their jurisdiction. This presents unique challenges in that IMAT’s are placed in an advisory capacity with no delegated authority.

Unit 8 Scenario- Public Health ..................................................................... 8:00
Scope Statement: This will be a five to six hour exercise that will allow the students to utilize lessons learned in previous Units. They are expected to interact with simulated served agency personnel during a public health pandemic. The team is not from the requesting entity.

Unit 9 Volunteers and Donations 2:30
Scope Statement: Students will be provided information on the importance of volunteer organizations, their response to incidents and how best to utilize volunteers to support personnel and the public. Additional Information addresses the spontaneous volunteer, people who just show up and want to help.

Unit 10 External influences ........................................................................ 3:00
Scope Statement: This Unit will provide the students with information which will help them to identify and manage external influences. These influences may include issues related to governmental agencies, special interest groups, industrial groups, political issues, the media, and situations where agencies and entities have conflicting primary, secondary, and/or parallel responsibilities.

Unit 11 Fiscal Considerations .................................................................... 1:00
Scope Statement: The students will be provided information which will assist them in identifying and finding potential solutions to complex or unfamiliar financial issues such as: Who has the authority to encumber funds? Who establishes the accounting systems to track and project costs? What is the fiscal effect of emergency declarations?

Unit 12 Final Written Exam ........................................................................ 2:30
Scope Statement: The summative exam covers all the AAIM material presented up to this point.

Unit 13 Scenario- Natural Disaster .................................................................7:00

Scope Statement: This will be a five to six hour exercise which will provide the students with a natural disaster scenario that incorporates all lessons from throughout the course. This will be the final scenario and will be weighted more heavily in the grading.

Unit 14 Course Critique / Team Evaluations / Closeout .........................................................1:00

Course Hours ................................................................................................................................48:00

*This is an abbreviated Course Plan. Terminal and Enabling Learning Objectives can be found on the full version located on the SFT Curriculum page of the SFT website at: http://osfm.fire.ca.gov/training/SFTCurriculum.php

Advanced All-Hazards Incident Management Course Plan

Unit 1 - Course Introduction

Scope Statement: The Scope of this Unit is to provide a description and overview of the course, define TLO, define ELO and provide students with the course expectations and evaluation process. During this Unit, students will be introduced to the instructors, provide an introduction of themselves, and learn the layout of the classroom and facilities.

Terminal Learning Objective (TLO): At the conclusion of this Unit the students will be able to describe the course outline, course expectations and evaluation process.

Enabling Learning Objectives (ELO):

1. Identify facility and classroom requirements
   - Start and end times
   - Breaks
   - Restrooms
   - Food locations
   - Smoking locations
ADVANCED ALL-HAZARDS INCIDENT MANAGEMENT COURSE PLAN

2. Review the course outline
   • Course objectives
     ▶ Calendar of events
     ▶ Course requirements
     ▶ Student evaluation process (80% is required on the summative test)
     ▶ Assignments and activities
     ▶ Required student resources

3. Class participation requirements
   • Describe course conduct
   • Identify instructors and coaches
   • Identify team members
   • Describe TLO
   • Describe ELO

Discussion Questions:
1. What are formative and summative tests?
2. What score do you need to successfully complete the final exam?

Activities:
1. To be determined by the instructor

Unit 2  Agencies, Entities and Plans 4:00
Scope Statement: The scope of this Unit will be to provide the student with information regarding agencies, entities, and plans that may need to be accessed and engaged in order to mitigate incidents. Agencies and entities may bring jurisdictional considerations, and resources which could be required to deal with incidents.

Terminal Learning Objective (TLO): At the conclusion of this Unit, students will be able to describe role, responsibilities and authorities of agencies, entities and plans.

Enabling Learning Objectives (ELO): For each government agency, governmental entities, the military, non-governmental organizations, corporate entities and organizations participants will:
  ▶ Describe the jurisdictional and statutory authorities and responsibilities
  ▶ Describe the process(s) for activating and/or accessing
  ▶ Describe their capabilities, limitations and potential resources
  ▶ Describe any special needs or considerations
  ▶ Understand any rules, responsibilities or relationships
  ▶ Describe Local, State and National plans
  ▶ Describe transition or short term recovery plans

Discussion Questions:
1. To be determined by the instructor

Activities:
1. To be determined by the instructor

Unit 3  Command and Coordination 2:30
Scope Statement: Students will be provided information on the interactions that occur with IMT’s and various levels of coordinating and directing organizations which may be instituted at a higher level command authority. These organizations may occur at the Federal, State, and Local levels of government.

Terminal Learning Objective (TLO): At the conclusion of this Unit, students will be able to describe methods which facilitate the interactions between IMT’s and other governmental coordinating/directing.
organizations including but not limited to a Multi-Agency Coordinating System, Area Command, Theatre- (NIMO) Teams, Joint Information Centers (JIC), Emergency Operations Centers (EOC).

**Enabling Learning Objectives (ELO):** At the conclusion of this Unit, students will be able to:
- Identify and describe the functions of coordinating and managing entities.
- Describe Operation Centers.
- Describe Joint Information Centers.
- Describe IMT Interactions with the groups listed above.
- Describe challenges that can occur when coordinating agencies.
- Describe strategies to overcome challenges when coordinating agencies.

**Discussion Questions:**
1. To be determined by the instructor.

**Activities:**
1. To be determined by the instructor.

### Unit 4 Scenario - Transportation 8:00

**Scope Statement:** This will be a five to six hour exercise that will allow the students to utilize lessons learned in previous Units. The IMT’s will develop a plan and provide solutions to a transportation scenario provided by the instructional staff. The intent of this scenario is to utilize tools that have been provided to demonstrate an ability to coordinate with agencies at the Federal, State, and Local levels.

**Terminal Learning Objective (TLO):** At the conclusion of this unit, the students will be able to develop a plan and provide solutions to a transportation scenario provided by the instructional staff.

**Enabling Learning Objectives (ELO):** At the conclusion of this unit, the students will be able to utilize tools that have been provided to demonstrate an ability to coordinate with agencies at the Federal, State, and Local levels.

**Discussion Questions:**
1. To be determined by the instructor.

**Activities:**
1. To be determined by the instructor.

### Unit 5 Safe Management of Incident Resources 2:30

**Scope Statement:** The scope of this Unit includes tools and information that IMT’s can utilize to identify and mitigate safety issues. Students will learn to address long duration assignments, tragedy and high stress situations. The team will be provided information to form a basis for making sound decisions to conduct safe incident operations.

**Terminal Learning Objective (TLO):** At the conclusion of this Unit students will be able to describe and implement effective mitigating strategies for safety issues and stressful situations.

**Enabling Learning Objectives (ELO):** At the conclusion of this unit, the students will be able to identify IMT and individual responsibilities and accountability for safely managing incident personnel.
- Describe key considerations to manage risk.
- Describe key considerations to manage stressful situations.
- Describe key considerations when assessing risk vs. gain.
- Describe resources available to use when injury or tragedy occurs.

**Discussion Questions:**
1. To be determined by the instructor.

**Activities:**
1. To be determined by the instructor.

### Unit 6 Incident Management Team Challenges 3:00

**Scope Statement:** In this Unit, teams will be provided with information to identify challenges that can impact a team and potential strategies to address them.
Terminal Learning Objective (TLO): At the conclusion of this Unit, students will be able to describe methods to identify and concepts to effectively address team challenges that may require enhanced skills to affect a successful outcome.

Enabling Learning Objectives (ELO): At the conclusion of this unit, the students will be able to identify and describe incident organization considerations such as:
- Intelligence function (sharing sensitive info) within NIMS
- Conventional and Unconventional team roles
- Incident Management Support vs. Operational Control
- Multiple IMT’s assigned to the same incident work
- Describe the challenges of transitioning
- Mission clarity / Delegation of Authority
- Transitions between different agency teams
- Agencies unfamiliar with formal transitions
- Describe methods to effectively integrate agencies/entities
- Describe concepts for maintaining relationships and resolving conflicts of: Jurisdictional authority, IMT, Agency Representative, staff, agency administrator, line officer and assisting cooperation agencies
- Describe the need to consider long term planning
- Describe concepts of resource utilization
- Describe the potential impacts of dignitary visits

Discussion Questions:
1. To be determined by the instructor

Activities:
1. To be determined by the instructor.

Unit 7  Incident Management Assistance Team (IMAT) 2:00
Scope Statement: IMAT’s are quite often called upon to assist and instruct other agencies in the management of incidents under their jurisdiction. This presents unique challenges in that IMAT’s are placed in an advisory capacity with no delegated authority.

Terminal Learning Objective (TLO): At the conclusion of this unit, students will be able to utilize the lessons taught to effectively integrate into, advise and serve a requesting agency as an Incident Management Assistance Team (IMAT).

Enabling Learning Objectives (ELO): At the conclusion of this unit, the students will be able to:
- Identify issues related to an IMT not being in charge
- Describe issues related to a requesting agency’s limited Incident Command System (ICS) knowledge
- Describe agency’s resistance to establishing ICS
- Describe when to utilize subject matter expert(s)
- Recognize when host agency has inadequate personnel to staff organization

Discussion Questions:
1. To be determined by the instructor

Activities:
1. To be determined by the instructor.

Unit 8  Scenario - Public Health 8:00
Scope Statement: This will be a five to six hour exercise that will allow the students to utilize lessons learned in previous Units. They are expected to interact with simulated served agency personnel during a public health pandemic. The team is not from the requesting entity.

Terminal Learning Objective (TLO): At the conclusion of this unit, the students will be able to identify the challenge with working as an IMAT and providing solutions.

Enabling Learning Objectives (ELO): At the conclusion of this unit, the students will be able to understand their role as an IMAT.

Discussion Questions:
1. To be determined by the instructor

Activities:
ADVANCED ALL-HAZARDS INCIDENT MANAGEMENT COURSE PLAN

Unit 9: Volunteers and Donations — 2:30

Scope Statement: Students will be provided information on the importance of volunteer organizations, their response to incidents and how best to utilize volunteers to support personnel and the public. Additional information addresses the spontaneous volunteer, people who just show up and want to help.

Terminal Learning Objective (TLO): At the conclusion of this unit, students will be able to describe the elements necessary to effectively utilize volunteers and volunteer organizations.

Enabling Learning Objective (ELO): At the conclusion of this unit, students will be able to:
- Identify volunteer and volunteer organization resources and capabilities.
- Primary entities: i.e. Red Cross, Salvation Army, etc.
- Secondary entities: Volunteer Organizations Active in Disasters (VOAD), California Animal response, Emergency Care System (CARES), etc.

Discussion Questions:
1. To be determined by the instructor

Activities:
1. To be determined by the instructor

Unit 10: External Influences — 3:00

Scope Statement: This Unit will provide the students with information which will help them to identify and manage external influences. These influences may include issues related to: governmental agencies, special interest groups, industrial groups, political issues, the media, and situations where agencies and entities have conflicting primary, secondary, and/or parallel responsibilities.

Terminal Learning Objective (TLO): At the conclusion of this Unit, students will be able to identify potential external influences which could influence the management of an incident and provide strategies to help resolve adverse situations.

Enabling Learning Objectives (ELO): At the conclusion of this unit, the students will be able to:
- Identify potential external administrative, political, environmental and legal influences that must be recognized and understood to successfully manage an incident.
- Describe which team position has primary responsibility for taking action.

Discussion Questions:
1. To be determined by the instructor

Activities:
1. To be determined by the instructor

Unit 11: Fiscal Considerations — 1:00

Scope Statement: The students will be provided information which will assist them in identifying and finding potential solutions to complex or unfamiliar financial issues such as: Who has the authority to encumber funds? Who establishes the accounting systems to track and project costs? What is the fiscal effect of emergency declarations?

Terminal Learning Objective (TLO): At the conclusion of this unit, the students will be able to identify and solve complex fiscal issues involving several agencies and scenarios including cost share, apportionment and accountability.

Enabling Learning Objectives (ELO): At the conclusion of this unit, students will be able to:
- Establish complete and accurate fiscal documentation
- Establish clearly defined fiscal responsibilities for all involved entities
- Agency relationships sharing jurisdictional/statutory responsibilities
- Cost effective management practices that support Agency Administrator(s) objectives.
- Authority to encumber funds
- Contracting Authorities
- Establishment of financial record keeping system for auditing purposes
- Reimbursement of funds
- Cost sharing
## Unit 12  Final Written Exam  2:30

**Scope Statement:** The summative exam covers all the AAIM material presented up to this point.

**Terminal Learning Objective (TLO):** At the conclusion of the exam, participants will have a good idea of how much material they have learned and retained.

**Enabling Learning Objectives (ELO):** At the conclusion of this unit, successful students will be able to recognize their level of understanding of the course materials and role on an IMT at the Type 1 complexity.

**Discussion Questions:**
1. To be determined by the instructor

**Activities:**
1. To be determined by the instructor

## Unit 13  Scenario – Natural Disaster  7:00

**Scope Statement:** This will be a five to six hour exercise which will provide the students with a natural-disaster scenario that incorporates all lessons from throughout the course. This will be the final scenario and will be weighted more heavily in the grading.

**Discussion Questions:**
1. To be determined by the instructor

**Activities:**
1. Instructions for completing the exam will be reviewed by the instructor to the participants.

## Unit 14  Course Critique / Team Evaluations / Closeout  1:00

**Discussion Questions:**
1. To be determined by the instructor

**Activities:**
1. To be determined by the instructor
Course: **I-200: Basic ICS (2006)**

**Hours:** 12-16

**Designed For:** First line supervisors, single resource bosses, lead dispatchers, field supervisors, company officers, and entry level positions (trainees) on incident management teams.

**Description:** This course introduces students to the principles of the Incident Command System (ICS) associated with incident-related performance. Topics include leadership and management, delegation of authority and management by objectives, functional areas and positions, briefings, organizational flexibility, transitions and transfers.

**Prerequisites:** None.

**Certification:** Not Applicable

**Class Size:** 40

**Restrictions:** None

### I-400 COURSE PLAN

Course information can be found on the link above
### S-130: Fire Fighter Training (2003)

- **Hours:** 30-35½
- **Designed For:** Entry-level firefighters.
- **Description:** This course is designed to provide entry-level fire fighters skills. Many of the units are set up so they can be taught in either the classroom or the field; field time is encouraged. A version of L-180, Human Factors on the Fireline, has been included as part of this course.
- **Prerequisites:** S-190
- **Certification:** None
- **Class Size:** 40
- **Restrictions:** None

### S-131: Fire Fighter Type 1 Training (2004)

- **Hours:** 8
- **Designed For:** Fire Fighter Type 1 (FFT1)
- **Description:** This course meets the training needs of the Fire Fighter Type 1 (FFT1) and is interactive in nature. Topics include fireline reference materials, communications, and tactical decision-making.
- **Prerequisites:** Qualified as a Fire Fighter Type 2 (FFT2)
- **Certification:** None
- **Class Size:** 40
- **Restrictions:** None

- **Hours:** 6-8
- **Designed For:** Entry-level fire fighters
- **Description:** This course provides instruction in the primary factors affecting the start and spread of wildfire and recognition of potentially hazardous situations. S-190 is typically taught in conjunction with or prior to Basic Fire Fighter Training, S-130. It is designed to meet the fire behavior training needs of a Fire Fighter Type 2 (FFT2) on an incident as outlined in the PMS 310-1, Wildland Fire Qualification System Guide and the position task book developed for the position.
- **Prerequisites:** None
- **Certification:** None
- **Class Size:** 40
- **Restrictions:** None

### S-200: Initial Attack Incident Commander (2007)

- **Hours:** 16
- **Designed For:** Personnel desiring to be qualified as an (ICT4)
- **Description:** This course is designed to meet the training needs of the Incident Commander Type 4. The six units cover: foundation skills, intelligence gathering and documentation, size-up, developing a plan of action, post-fire activities, evaluating incident objectives, and managing the incident. Evaluation of the student is by unit tests and performance based evaluations.
- **Prerequisites:** Qualified as a Single Resource Boss
- **Certification:** None
- **Class Size:** 40
- **Restrictions:** None

### S-203: Introduction to Incident Information (2008)

- **Hours:** 30
### Course Information and Required Materials

**S-219 Firing Operations (2014)**

<table>
<thead>
<tr>
<th>Hours</th>
<th>Designed For</th>
<th>Description</th>
</tr>
</thead>
</table>
| 16 | Personnel desiring to be qualified as Firing Boss (FIRB) | This course introduces the roles and responsibilities of a Firing Boss (FIRB), common firing
devices, and general firing operations and techniques. Although comprehensive in nature, the coursework is not a substitute for the dynamic fire environment. The course provides students with important information concerning general tasks required to be successful. Any opportunity to show students a small-prescribed burn or demonstrate how devices operate in the field will promote transferring these new skills to the job. Due to the wide variety and capabilities of sponsors presenting this course, the field exercise portion of the class is not defined. Therefore, the cadre and sponsoring unit are responsible for planning field exercises and demonstrations in accordance with their capabilities.

**Prerequisites:** S-290  
**Certification:** None

**Max Class Size:** Ratio: 10:1 (Skills Proficiency)  
**Restrictions:** This course requires a site with adequate materials and equipment to deliver the training according to the course outline.

---

**Hours:** 24  
**Designed For:** Personnel desiring to be qualified as an Engine Boss (ENGB)  
**Description:** Training for the single resource boss position from initial dispatch through demobilization to the home unit. Topics include operational leadership, preparation and mobilization, assignment preparation, risk management, entrapment avoidance, safety and tactics, offline duties, demobilization, and post incident responsibilities.

**Prerequisites:** S-290 and qualified as a Fire Fighter Type 1 (FFT1)  
**Certification:** None  
**Class Size:** 40  
**Restrictions:** None

---

**S-231: Engine Boss (2004)**

**Hours:** 12-16  
**Designed For:** Personnel desiring to be qualified as an Engine Boss (ENGB)  
**Description:** Designed to produce student proficiency in the performance of the duties associated with ENGB. Topics include engine and crew capabilities and limitations, information sources, fire size-up considerations, tactics, and wildland/urban interface.

**Prerequisites:** S-230 and qualified as a Fire Fighter Type 1 (FFT1)  
**Certification:** None  
**Class Size:** 40  
**Restrictions:** None

---

**S-234 Ignition Operations (2009)**

**Hours:** 16  
**Designed For:** Personnel desiring to be qualified as Firing Boss (FIRB)

Any opportunity to show students a small-prescribed burn or demonstrate how devices operate in the field will promote transferring these new skills to the job. Due to the wide variety and capabilities of sponsors presenting this course, the field exercise portion of the class is not defined. Therefore, the cadre and sponsoring unit are responsible for planning field exercises and demonstrations in accordance with their capabilities.
### S-244: Field Observer (2007)

**Hours:** 20  
**Designed For:** Personnel desiring to be qualified as a Field Observer (FOBS) and/or Fire Effects Monitor (FEMO)  
**Description:** This course provides the student with the skills necessary to perform as a field observer (FOBS) and/or a fire effects monitor (FEMO). Topics include roles and responsibilities of the FOBS and FEMO; how to make observations and document those observations; how to produce hand drawn and GPS field maps; and how to navigate using a compass and GPS. The navigation unit has 4½ hours of field exercises and the final field exercise is 8 hours.

**Prerequisites:** Successful completion of the precourse work  
- Ability to use a GPS receiver  
- S-290  

**Certification:** None  
**Class Size:** 40  
**Restrictions:** None

### S-245: Display Processor (2007)

**Hours:** 8  
**Designed For:** Personnel desiring to be qualified as a Display Processor (DPRO)  
**Description:** This course provides students with the skills necessary to perform as a Display Processor (DPRO). Topics include general roles and responsibilities and how to assist the situation unit leader with producing incident maps, inputs for the Incident Status Summary (ICS-209) and other incident products. The final exam is 3 hours.

**Prerequisites:** Successful completion of the precourse work  
**Certification:** None  
**Class Size:** 40  
**Restrictions:** None

**Hours:** 16  
**Designed For:** Single Resource Boss, Incident Commander Type 4 (ICT4), and Support Dispatcher (EDSD)  
**Description:** This course covers aircraft types and capabilities, aviation management and safety for flying in and working with agency aircraft, tactical and logistical uses of aircraft, and requirements for helicopter take-off and landing areas. Note: the regulations, procedures, and policies addressed in this course are primarily those governing federal agency and ICS operations. State, county, or other political subdivisions using this course will need to consult their agency having jurisdiction with respect to regulations, procedures, and policies.

**Prerequisites:** None  
**Certification:** None  
**Class Size:** 40  
**Restrictions:** None

</tbody>
</table>

**Hours:** 24-32  
**Designed For:** Experienced Single Resource Bosses and Initial Attack Incident Commanders  
**Description:** Designed to meet training requirements in the Operations Section of the ICS and is specific to wildland fire suppression. This course prepares experienced Single Resource Bosses and Initial Attack Incident Commanders in the tactics necessary at the Strike Team/Task Force Leader level. It is also valuable for Operations Supervisors qualified at higher management levels who have not received training in wildfire suppression tactics.  
**Prerequisites:** Qualified as a Single Resource Boss or Initial Attack Incident Commander Type 4 (ICT4)  
**Certification:** None  
**Class Size:** 40  
**Restrictions:** None

### S-339: Division/Group Supervisor (2006)

**Hours:** 20  
**Designed For:** Personnel desiring to be qualified as a Division/Group Supervisor (DIVS)  
**Description:** Prepares students to perform in the role of Division/Group Supervisor and provides instruction in support of the specific tasks of the DIVS. Topics include division/group management, organizational interaction, division operations, all-hazard operations, and tactical decision games (optional). There is a final examination in this course.  
**Prerequisites:** I-200, I-300  
**Certification:** None  
**Class Size:** 40  
**Restrictions:** None

### S-346: Situation Unit Leader (2008)

**Hours:** 18-24  
**Designed For:** Personnel desiring to be qualified as Situation Unit Leader (SITL).  
**Description:** The course starts with how to activate, setup, organize, manage, and demobilize a situation unit. It then addresses the products (maps, ICS-209, and other reports) the unit produces, as well as the technology needed to produce the products.  
**Prerequisites:** Successful completion of the precourse work  
**Certification:** Qualified as any Strike Team Leader or Incident Commander Type 4 (ICT4)  
**Class Size:** 40  
**Restrictions:** None

### S-349: Resources Unit Leader/Demobilization Unit Leader (2008)

**Hours:** 28-32  
**Designed For:** Personnel desiring to be qualified as a Resources Unit Leader (RESL) and/or Demobilization Unit Leader (DMOB)  
**Description:** Training begins with a discussion on unit activation and management. Topics include RESL responsibilities related to resource status systems, planning process, and resource products/outputs and DMOB responsibilities for developing and implementing the demobilization plan.  
**Prerequisites:** Successful completion of the precourse work and test  
**Certification:** Basic knowledge of current automated resource status system, such as I-Suite

**S-360: Finance/Administration Unit Leader (2001)**

- **Hours:** 32
- **Designed For:** Personnel desiring to be qualified as a Procurement (PROC), Cost (COST), Time (TIME), and/or Compensation/Claims (COMP) Unit Leader
- **Description:** Designed to provide the prerequisite knowledge and skills necessary to perform the tasks of Finance/Administration Unit Leader.
- **Prerequisites:** Qualified as Personnel Time Recorder (PTRC) for Time Unit Leader (TIME) Qualified as Equipment Time Recorder (EQTR) and meet agency procurement authority requirements for procurement unit leader (PROC) Qualified as Compensation-For-Injury Specialist (INJR) and Claims Specialist (CLMS) for Compensation/Claims Unit Leader (COMP) Have agency related cost estimation and analysis experience for Cost Unit Leader (COST)
- **Certification:** None
- **Class Size:** 40
- **Restrictions:** None

**S-390: Introduction to Wildland Fire Behavior Calculations (2006)**

- **Hours:** 32
- **Designed For:** Personnel desiring to become qualified as Division/Group Supervisor (DIVS), Prescribed Fire Burn Boss Type 2 (RXB2), Incident Commander Type 3 (ICT3), or in a position requiring this knowledge
- **Description:** Designed to introduce fire behavior calculations by manual methods, using nomograms and the Fire Behavior Handbook Appendix B. the student gains an understanding of the determinants of fire behavior though studying inputs (weather, slope, fuels, and fuel moisture). The student also learns how to interpret fire behavior outputs, documentation processes, and fire behavior briefing components.
- **Prerequisites:** S-290 and qualified as a Single Resource Boss
- **Certification:** None
- **Class Size:** 40
- **Restrictions:** None

**S-400: Incident Commander (2002)**

- **Hours:** 24
- **Designed For:** Personnel desiring to be qualified as an Incident Commander Type 2 (ICT2)
- **Description:** Topics include team administration, communication, information/intelligence processing, agency administrator and IC responsibilities, transfer of command, and demobilization. The course provides exercises to assist the student in acquiring the knowledge to learn these skills. An optional "lessons learned" unit allows the addition of geographic area specific information, but the course time frame must be increased accordingly.
- **Prerequisites:** Qualified as an Incident Commander Type 3 (ICT3) Qualified as one of the General Staff Section Chiefs at the Type 2 level
- **Certification:** None
- **Class Size:** 40
- **Restrictions:** None

**S-403: Information Officer (2001)**
### S-404: Safety Officer (2002)

**Hours:** 24  
**Designed For:** Personnel desiring to be qualified as a Safety Officer  
**Description:** Designed to meet the training needs of the Safety Officer position in the incident command system. Topics include safety officer effectiveness, analysis techniques, safety messages, briefings and reports, and high hazard operations.  
**Prerequisites:** None  
**Certification:** None  
**Class Size:** 40  
**Restrictions:** None

### S-420: Command and General Staff (2002)

**Hours:** 36  
**Designed For:** Personnel desiring to be qualified as an Incident Commander Type 2 (ICT2) or Command or General Staff positions  
**Description:** Designed to prepare the student to function effectively in the position of a Type 2 Incident Commander, Command, or General Staff. The focus is on the application of previously acquired knowledge and skills. Students will participate in two types of groups (teams and similar position) during exercises that include a simulation of the mobilization, management, and demobilization phases of a rapidly accelerating Type 2 wildfire that has potential to become a Type 1 incident.  
**Prerequisites:** None required  
**Certification:** None  
**Class Size:** 40  
**Restrictions:** None

### S-430: Operations Section Chief (2006)

**Hours:** 24  
**Designed For:** Personnel desiring to be qualified as an Operations Section Chief Type 2 (OSC2)  
**Description:** Designed to meet the training needs of the Operations Section Chief Type 2. This course is interactive in nature and contains several exercises designed to facilitate group and classroom discussion.  
**Prerequisites:** Qualified as a Division/Group Supervisor (DIVS)  
**Certification:** None  
**Class Size:** 40

<tr>
<td>S-440: Planning Section Chief (2001)</td>
<td>Personnel desiring to be qualified as a Planning Section Chief Type 2 (PSC2) Designed to meet a portion of the training needs of the Planning Section Chief Type 2. Topics include information gathering, strategies, meetings and briefings, incident action plans (IAP), interactions, forms, documents, supplies, demobilization, and an optional technology section. In the final exercise, the students observe a simulated planning meeting and use the information derived to find errors in an IAP. Students must pass the unit tests and the final exercise to successfully complete the course. Prerequisites: Successful completion of the precourse work Qualified as a Situation Unit Leader (SITL) Qualified as a Resources Unit Leader (RESL) Certification: None Class Size: 40 Restrictions: None</td>
</tr>
<tr>
<td>S-445: Incident Training Specialist (2009)</td>
<td>Personnel desiring to be qualified as Training Specialist (TNSP) and should be based on technical competence in the ICS, availability to participate on incidents, and displayed interest in improving training Designed to train personnel to perform the duties of a Training Specialist. Duties include coordinating incident training opportunities and activities, ensuring the quality of training assignments, and completing documentation of the incident training. Prerequisites: None Certification: None Class Size: 40 Restrictions: None</td>
</tr>
<tr>
<td>S-450: Logistics Section Chief (2002)</td>
<td>Personnel desiring to be qualified as a Logistics Section Chief Type 2 (LSC2) Designed to meet the national core needs of the Logistics Section Chief Type 2. Topics include arriving properly an incident, gathering information to access the assignment, beginning initial planning activities, determining that facilities, services, and materials are provided for the incident, planning, staffing, and managing the Logistics Section, coordinating with other sections, and implementing the demobilization plan. Prerequisites: Qualified as a Facilities Unit Leader (FACL) Qualified as a Ground Support Unit Leader (GSUL) or Qualified as a Facilities Unit Leader (FACL) Qualified as a Supply Unit Leader (SUPL) Certification: None Class Size: 40 Restrictions: None</td>
</tr>
</tbody>
</table>
S-460: Finance/Administration Section Chief (2001)

- **Hours:** 24
- **Designed For:** Personnel desiring to be qualified as a Finance/Administration Section Chief Type 2 (FSC2)
- **Description:** Designed to meet a portion of the training needs in the finance section organization. Topics include predispatch and response, organization and operation of the finance function, and demobilization.
- **Prerequisites:** Qualified as a Time Unit Leader (TIME)
  - Qualified as a Procurement Unit Leader (PROC) or Cost Unit Leader (COST)
- **Certification:** None
- **Class Size:** 40
- **Restrictions:** None

- **Hours:** 40
- **Designed For:** Personnel desiring to be qualified as a Fire Behavior Analyst (FBAN) or Long Term Fire Analyst (LTAN)
- **Description:** This course is the fourth in a series designed to develop fire behavior and prediction knowledge and skills and prepares the student for S-590, Advanced Fire Behavior Interpretation. Examples and exercises are divided between wildfire and prescribed fire applications. The student learns to project fire perimeter growth based on weather predictions and knowledge of fuels and topography, using a variety of scenarios.
- **Prerequisites:** S-390 and proficiency using non-automated fire behavior processors and the latest computerized fire modeling system
- **Certification:** None
- **Class Size:** 40
- **Restrictions:** None

- **Hours:** 32
- **Designed For:** Dispatchers and others charged with editing and inputting weather information into WIMS used for NFDRS calculations, fire management staff who apply NFDRS outputs to decision making, and Fire Behavior Specialists who incorporate NFDRS products into assessments and projections
- **Description:** The course develops the knowledge and skill to operate, maintain, and manage the NFDRS at the local unit. Course lecture and exercises support practical and technical application of the intellectually complex subject matter. The course requires a computer classroom with internet access to present.
- **Prerequisites:** S-290
  - Successful completion of the prequalifying course work
  - Intermediate skills with the current Windows™ operating system
  - Possess a valid Weather Information Management System (WIMS) logon identification
- **Certification:** None
- **Class Size:** 40
- **Restrictions:** None
Module: Designed for: Firefighters, Fire Investigators, Fire Inspectors, and Fire Dispatchers
Description: To educate the basic entry level Terrorism Liaison Officer with the policies and procedures of the Fusion Center which they will be working with in their Area of Responsibility. This training essential for fire service personnel working with multiple discipline stakeholders who share information with the California Fusion Centers.

Prerequisites: None
Certification: None
Class Size: 50
Restrictions: Public Safety Personnel only not intended for General Public.

**TERRORISM LIAISON OFFICER–BASIC COURSE PLAN**

**Module 1 – Overview and Introduction**

*Scope Statement:* Participants are provided an overview of the course and a brief history of the national and statewide TLO concept. The module also introduces key, foundational concepts and sets the stage for instruction in subsequent modules.

1:00

**Module 2 – The Role of the TLO**

*Scope Statement:* Participants will be given a brief history and evolution of fusion centers and their intended functionality. Participants will be introduced to the history and development of the TLO Program in California, and the role of the TLO in support of the California State Threat Assessment System (STAS). The participants will be introduced to their unique Regional Threat Assessment Center and their individual capabilities-LECC, JRIC, OCIAC, NCRIC, CCIC. Specifically, instruction addresses TLO information sharing; terrorism/all-crimes information collection; internal agency training; public and private sector outreach; and TLO recruitment. Instruction addresses TLO role in identifying crime trends; officer safety issues; and indicators and warning signs of potential terrorist activities. During this module, participants also receive instruction on safeguarding restricted information and will complete Non-Disclosure agreement.

1:00

**Module 3 – TLO and Fusion**

*Scope Statement:* This module addresses the TLO role within a post September 11, 2001 domestic intelligence system and how the information provided by TLO into the fusion center is used to facilitate the initiation of investigations and/or the direct interdiction of criminal activities and terrorism threats. Participants are introduced to the distinctions between investigations versus intelligence and their diverse purposes. Instruction also familiarizes participants with the organization and structure of the U.S. Intelligence Community and its relationship with local, county, state stakeholders. Participants will receive instruction on legal issues and privacy policies such as 28CFR, ensuring that the student understands that criminal intelligence systems and operations conform to the privacy and constitutional rights of individuals.

2:00

**Module 4 - Overview of Terrorism**

*Scope Statement:* Instruction and participant discussions in this 3.5-hour module review the defining characteristics of terrorism. The module addresses terrorism across the spectrum of...
TERRORISM LIAISON OFFICER–BASIC COURSE OUTLINE (cont’d)

transnational, international, domestic, and single-issue categories. Instruction defines each
terrorism category and further addresses their various distinctions and characteristics.
Additionally, instruction addresses exemplar groups practicing these various types of terrorism
and explores each group’s history, capabilities
and intentions, MO, and future outlook as a threat to national interests. Terrorism groups and
movements addressed in this introductory overview include: transnational terrorist organizations
such as al Qaeda and its affiliates in Yemen, North Africa, Somalia, and Indonesia; international
terrorist organizations such as Hezbollah and Hamas; domestic terrorist phenomena such as
homegrown violent jihadist, white supremacist, and anti-government groups; and single-issue
movements such as animal rights, environmental extremists, and anti-abortionists.

Module 5 - Course Conclusion ........................................................................................................ 0:30

Scope Statement: Instruction and participant discussion in this 30-minute module reviews
relevant lessons and clarifies core concepts as requested by participants or as identified by
instructors.

*This is an abbreviated Course Plan. Terminal & Enabling Objectives can be found on the full version located on
the SFT Curriculum page of the SFT website at: http://osfm.fire.ca.gov/training/SFTCurriculum.php

Module 1 – Overview and Introduction .................................................................................................. 1:00

Scope Statement: Participants are provided an overview of the course and a brief history of the national and
statewide TLO concept. The module also introduces key, foundational concepts and sets the stage for instruction
in subsequent modules.

Terminal Learning Objective (TLO): Participants will be able to state the course purpose and explain the
importance of understanding, developing/enhancing counterterrorism intelligence and operational strategies.

Enabling Learning Objectives (ELO): At the conclusion of this module, participants will be able to summarize the
following:
1. TLO Mission
2. Course Objectives
3. Core Concepts

Instructional Strategy: Lecture and participant discussion.

Assessment Strategy: Instructor assessment of learner participation using two-way discussions.

Practical Exercise Statement: Pre-test administration and review of answers.

Module 2 – The Role of the TLO ........................................................................................................... 1:00

Scope Statement: Participants will be given a brief history and evolution of fusion centers and their
intended functionality. Participants will be introduced to the history and development of the TLO Program
in California, and the role of the TLO in support of the California State Threat Assessment System (STAS).
The participants will be introduced to their unique Regional Threat Assessment Center and their individual
capabilities-LECC, JRIC, OCIAC, NCRIC, CCIC. Specifically, instruction addresses TLO information sharing;
terrorism/all-crimes; information collection; internal agency training; public and private sector outreach;
and TLO recruitment. Instruction addresses TLO role in identifying crime trends; officer safety issues; and
indicators and warning signs of potential terrorist activities. During this module, participants also receive
instruction on safeguarding restricted information and will complete non-Disclosure agreement.

Terminal Learning Objective (TLO): Participants will be able to state the role of the TLO in supporting the
STAS and will be able to identify the unique capabilities and policies of their specific Regional Threat
Assessment Center.
Enabling Learning Objectives (ELO): At the conclusion of this module, participants will be able to:

1. Explain the reason and functionality of fusion centers.
2. Describe the responsibilities of California STAS and the regionally specific RTAC.
3. Explain the fusion center’s “all threats”, “all crimes”, and “all hazards” concept.
4. Describe the roles and expectations for the TLO partnerships that currently exist with the regionally specific RTAC.
5. Describe the 8 Indicators of Terrorism.

Instructional Strategy: Lecture and participant discussion.

Assessment Strategy: Instructor assessment of learner participation using two-way discussions.

Module 3—TLO and Fusion

Scope Statement: This module addresses the TLO role within a post September 11, 2001 domestic intelligence system and how the information provided by TLO into the fusion center is used to facilitate the initiation of investigations and/or the direct interdiction of criminal activities and terrorism threats. Participants are introduced to the distinctions between investigations versus intelligence and their diverse purposes. Instruction also familiarizes participants with the organization and structure of the U.S. Intelligence Community and its relationship with local, county, state stakeholders. Participants will receive instruction on legal issues and privacy policies such as 28CFR, ensuring that the student understands that criminal intelligence systems and operations conform to the privacy and constitutional rights of individuals.

Terminal Learning Objective (TLO): Participants will understand the national domestic intelligence system and how TLO information contributes to the larger effort.

Enabling Learning Objectives (ELO): At the conclusion of this module, participants will be able to describe the following characteristics of the U.S. domestic intelligence system:

1. The distinction between fusion and intelligence.
2. The intelligence cycle and understand planning, collection, processing, collation, analysis, dissemination and reevaluation of information.
3. Tactical, operational and strategic intelligence.
4. The organizational structure of the National Intelligence Community and its relationship with local, county, tribal and state law enforcement and other stakeholders.
5. 28 Code of Federal Regulations, Part 23 (28CFR) and explain the necessity of conforming with constitutional rights of individuals.

Instructional Strategy: Lecture, participant activity, participant discussion, and feedback presentation.

Assessment Strategy: Instructor assessment of learner participation using two-way discussions and feedback presentations.

Practical Exercise Statement: Not Applicable

Module 4—Overview of Terrorism

Scope Statement: Instruction and participant discussions in this 3.5-hour module review the defining characteristics of terrorism. The module addresses terrorism across the spectrum of transnational, international, domestic, and single-issue categories. Instruction defines each terrorism category and further addresses their various distinctions and characteristics. Additionally, instruction addresses exemplar groups practicing these various types of terrorism and explores each group’s history, capabilities and intentions, MO, and future outlook as a threat to national interests. Terrorism groups and movements addressed in this introductory overview include: transnational terrorist organizations such as al-Qaeda and its affiliates in Yemen, North Africa, Somalia, and Indonesia; international terrorist organizations such as Hezbollah and HAMAS; domestic terrorist phenomena such as homegrown violent jihadist, white supremacist, and anti-government groups; and single-issue movements such as animal rights, environmental extremists, and anti-abortionist.

Terminal Learning Objective (TLO): Participants will have an enhanced understanding of the capabilities, intentions, tactics, techniques, and procedures of specified transnational, international, domestic, and single-issue terrorist groups.

Enabling Learning Objectives (ELO): At the conclusion of this course, participants will be able to:

1. Define the principle characteristics of terrorism.
Module 5 - Course Conclusion

Scope Statement: Instruction and participant discussion in this 30-minute module reviews relevant lessons and clarifies core concepts as requested by participants or as identified by instructors.

Terminal Learning Objective (TLO): Participants will be able to perform duties of a basic TLO.

Enabling Learning Objectives (ELO): At the conclusion of this module, participants will be able to:
1. TLO Role and Responsibilities
2. National Fusion Center Intelligence Process and how TLO participates in it

Instructional Strategy: Lecture and participant discussion.
Assessment Strategy: Instructor assessment of learner participation using two-way discussions.
Practical Exercise Statement: Not Applicable.
Course: AH-221: Damage Inspection Specialist (DINS) (2018)

Hours: 16

Designed For: Damage Inspection Specialist (DINS), All-Hazards

Description:
This course is designed to provide the skills and knowledge needed to perform in the role of a Damage Inspection Specialist. Topics include position overview; supplies and equipment; assignments; Damage Inspection Manager (DINM) expectations; communications; documentation; navigation; safety, and data collection.

Prerequisites:
Introduction to Incident Command System (IS-100); and ICS for Single Resources and Initial Action Incidents (IS-200.b); and National Incident Management System (NIMS), An Introduction (IS-700.a); and Basic Land Navigation (NWCG) (PMS-475); and Fire Fighter I; or CAL FIRE Basic Fire Fighter (minimum of 67-hour course); or Firefighter Training, (NWCG) (S-130); or Incident Safety Awareness for Hired Vendors, State Fire Training

Max. Class Size: 40

Restrictions: None

UNIT 1: UNIT 1: COURSE INTRODUCTION

Topic 1-1: Course Introductions .................................................................................................................. 0:40
Topic 1-2: Course Description and Objectives ......................................................................................... 0:10
Topic 1-3: General Knowledge Requirements ......................................................................................... 0:05
Topic 1-4: Course Requirements ............................................................................................................. 0:05

UNIT 2: POSITION OVERVIEW

Topic 2-1: Position Description .................................................................................................................. 0:30
Topic 2-2: Responsibilities ......................................................................................................................... 0:30
# AH-221 COURSE OUTLINE*

## Unit 3: Assignment
- Topic 3-1: Preparing for the Assignment .............................................................. 0:30
- Topic 3-2: Receiving the Assignment ................................................................. 0:10
- Topic 3-3: Travel to the Incident ......................................................................... 0:05
- Topic 3-4: Checking in at the Incident ................................................................. 0:45

## Unit 4: Inspection Process
- Topic 4-1: Initial Damage Inspection Process ...................................................... 0:45
- Topic 4-2: Data Collection .................................................................................. 3:00
- Topic 4-3: Field Data Collection Process ............................................................ 3:45
- Topic 4-4: Deliverables ...................................................................................... 0:30

## Unit 5: Incident Action Plan and Operational Briefing
- Topic 5-1: Incident Action Plan (IAP) ................................................................. 0:10
- Topic 5-2: Components of the IAP .................................................................... 0:30
- Topic 5-3: Operational Briefing ......................................................................... 0:20

## Unit 6: Safety Considerations
- Topic 6-1: Personal Safety ................................................................................ 0:20
- Topic 6-2: All-Hazard Incidents .................................................................... 0:20
- Topic 6-3: Wildland Fire Incident Hazards ....................................................... 0:20

Course Information and Required Materials
January 2019 May 2015

Course: AH-330: Strike Team/Task Force Leader All Hazards (2017)

Hours: 32

Designed For: Strike Team/Task Force Leader, All Hazards (STEN/TFLD)

Description: This course is designed to provide the skills and knowledge needed to perform in the position of Strike Team/Task Force Leader. Topics include position overview; pre-deployment responsibilities; concept of the position; resource typing standards; pre-dispatch preparation; incident responsibilities; administration; supervision; response; assignment; demobilization; tactics and safety; risk management; entrapment avoidance; WUI; case studies; scenarios; appropriate action vs. freelancing.

Prerequisites: ICS-200.B: Incident Command System for Single Resources & Initial Action Incidents; and CICCS qualified Engine Boss, Heavy Equipment Boss or Crew Boss

Instructor Level: SFT approved instructor and qualified Division Supervisor (DIVS)

Max. Class Size: 20

Restrictions: None

### AH-330 STRIKE TEAM/TASK FORCE LEADER COURSE OUTLINE

#### Unit 1: Introduction
- Topic 1-1: Orientation and Administration
- Topic 1-2: Course Introduction

#### Unit 2: Pre-deployment Responsibilities
- Topic 2-1: Concept of a Strike Team/Task Force Leader
- Topic 2-2: Resource Typing Standards
- Topic 2-3: Pre-Dispatch Preparation
Unit 3: Incident Responsibilities

- Topic 3-1: Administration
- Topic 3-2: Supervision
- Topic 3-3: Strike Team/Task Force Response
- Topic 3-4: Assignment/Status
- Topic 3-5: Demobilization
- Topic 3-6: An Operational Period as a ST/TFL

Unit 4: Tactics and Safety

- Topic 4-1: Risk Management
- Topic 4-2: Entrapment Avoidance
- Topic 4-3: Tactical Considerations – Wildland/Urban Interface
- Topic 4-4: Case Studies
- Topic 4-5: Scenarios
- Topic 4-6: Appropriate Action vs. Freelancing

*This is an abbreviated Course Plan. Terminal and Enabling Learning Objectives can be found on the full version located on the SFT Curriculum page of the SFT website at: http://osfm.fire.ca.gov/training/SFTCurriculum.php

**Hours:** 28

**Designed For:** Individuals qualifying within the ICS as a Task Force or Strike Team Leader

**Description:** This course contains generic curriculum regarding tactics and strategy as it relates to the management of a strike team or task force and meets the S-330 training requirements of the California Incident Command Certification System (CICCS) for the position of Strike Team/Task Force Leader-All Risk.

**Prerequisites:** I-300, S-290

**Certification:** N/A

**Class Size:** 40

**Restrictions:** None

### S-330 ALL-RISK COURSE OUTLINE

**Course Objectives:** To provide the student with...

- Information on Strike Team/Task Forces of various resources.
- Information on implementing Strike Team/Task Force Leader responsibilities prior to and during mobilization and demobilization.
- Information on implementing Strike Team/Task Force Leader responsibilities during incident activities.
- Information on identifying the hazards and risks throughout Strike Team/Task Forces deployment and describe how to mitigate them.
- Information on recognizing, planning for, and describing how to implement appropriate tactics in various all-risk-incident situations with various resources organized into strike teams or task forces.

**Course Content:**

#### Unit 1: Course Introduction

- Course Introduction .......................................................................................................................... 32:00

#### Unit 2: Predeployment Responsibilities

- Concept of Strike Team/Task Force Leader ..................................................................................... 1:30

### S-339 All Risk Course Outline

Course Objectives: To provide the student with...

- The concepts of a division and group as it relates to the position of Division/Group Supervisor.
- The opportunity to apply Division/Group fundamentals to ALL RISK incidents.
- The opportunity to prepare for and participate in planning meetings to develop and implement division/group objectives.
- The opportunity to participate in information gathering practices.
- The opportunity to participate in an operational period briefing and a division/group briefing.
- Information on managing and adjusting the operations organization.
- An understanding of why and when tactics may need to be adjusted.
- Information on the role of the Division/Group Supervisor in risk assessment and safety management.
- The opportunity to demonstrate how to successfully coordinate internal and external relations.

INSTRUCTOR COURSES

Course: Ethical Leadership in the Classroom (2007)

Hours: 8

Designed For: State Fire Training Instructors

Description: This one-day course is designed to provide you with concepts and theories of the ethical decision-making process, help you recognize the signs of an ethical dilemma, identify advantages and disadvantages of ethical behavior, and an opportunity to review examples of classroom situations in which instructors used their leadership role to either encourage or discourage ethical behavior. Participants in this class will examine ethics, values, principles, and morality. State Fire Training's Instructor Code of Ethics/Conduct will also be presented.

Prerequisites: None
Certification: None

Max Class Size: 30
Restrictions: This course may require a State Fire Training representative in addition to the Primary Instructor.

ETHICAL LEADERSHIP IN THE CLASSROOM COURSE OUTLINE

Course Objectives: To provide the student with...
- A fundamental awareness of ethical values within fire service instructors by exploring examples of ethical behavior in the classroom environment.
- The basic concepts, terms, and theories of ethical decision-making processes.
- An instructor code of ethics.
- Concepts in ethical leadership.
- Ethics awareness and a method for assessing personal values.
- A process for analyzing the role of the fire service instructor in maintaining the value system through video case studies and classroom ethical situations.

**Course Information and Required Materials**

**January 2019**

**Course:** Certification Examination Evaluator Training (2016)

**Hours:** 6

**Designed For:** Personnel affiliated with an Accredited Regional Training Program (ARTP) or an Accredited Local Academy (ALA) who will be serving as either a Registered Lead Evaluator or Skills Evaluator for a certification examination process (written and/or skills).

**Description:** This course provides in-depth instruction on the registration requirements for Registered Lead Evaluators and Skills Evaluators, processes and procedures to request and successfully deliver both written and skills certification examinations, and information on making the transition from instructor to evaluator.

**Prerequisites:** Endorsement by the director of an ARTP or ALA. Lead Evaluator candidates must be a Registered Instructor in good standing with SFT; Skills Evaluator candidates must meet the requirements to serve as a Fire Fighter I Instructor as set forth in the SFT Procedures manual.

**Certification:** None

**Standard:** Complete all practical exercises

**Max. Class Size:** 60

**Restrictions:** This class is scheduled and taught by State Fire Training staff only.

Course Information and Required Materials

Course: Group Dynamics and Problem Solving (2017)

Hours: 32

Designed For: Personnel preparing for a college level fire instructor, SFT Certified Training Instructor position, or career development for teaching SFT Instructional Curriculum.

Description: This course is designed to develop leadership skills; group dynamics, problem-solving techniques, and interpersonal relations are utilized in staff meetings, brainstorming sessions, and conference meetings. Skills are developed for conducting formal public meetings, panel discussions, and forums.

Prerequisites: Instructor I recommended
Instructor II recommended

Certification: FSTEP: Instructional Development Series

Standard: Complete all group activities and formative tests. Pass all individual activities without omitting critical criteria as identified on activity sheet(s).

Max. Class Size: 25

Stud./Instructor Ratio: 25:1 (Lecture/Activities); 7:1 (Skills)

Restrictions: None. Instructor must submit letter for approval of conditions outside the parameters of normal classroom instruction, e.g. class size exceeds 25, compressed course delivery, and/or approval from State Fire Training for distance learning format.

INSTRUCTOR COURSES

COURSE INFORMATION AND REQUIRED MATERIALS

Course: Employing Audiovisual Aids (2017)

Hours: 39

Designed For: Personnel preparing for a college level fire instructor, SFT Certified Training Instructor position, or career development for teaching SFT Instructional Curriculum.

Description: This course covers the principles and selection of media in the instructional process, employment of basic and advanced forms of instructional media, use of computers in the instructional process, and individualized instruction programs. Teaching demonstrations are required of all participants.

Prerequisites: Instructor I recommended
Instructor II recommended

Certification: FSTEP: Instructional Development Series

Standard: Complete all group activities and formative tests. Pass all individual activities without omitting critical criteria as identified on activity sheet(s).

Max. Class Size: 25

Stud./Instructor Ratio: 25:1 (Lecture/Activities)

Restrictions: None. Instructor must submit letter for approval of conditions outside the parameters of normal classroom instruction, e.g. class size exceeds 25, compressed course delivery, and/or approval from State Fire Training for distance learning format.

EMPLOYING AUDIOVISUAL AIDS COURSE OUTLINE

Unit 1: Introduction
- Topic 1-1: Orientation and Administration
- Topic 1-2: Introduction Certification Process
- Topic 1-3: Definition of Duties

Unit 2: History of Audiovisual Development and Education
- Topic 2-1: History of Audiovisual and Educational Development
- Topic 2-2: Historical Media

Unit 3: Legal Considerations
- Topic 3-1: Legal Concerns in Instructional Media Usage
- Topic 3-2: Eliminating Bias in Instructional Materials
- Topic 3-3: Security and Access of Electronic Data

Unit 4: Utilization of Instructional Aids
- Topic 4-1: Why Use Audiovisual Aids
- Topic 4-2: Classes of Instructional Aids
- Topic 4-3: Development and Design Effective Instructional Materials
EMPLOYING AUDIOVISUAL AIDS COURSE OUTLINE

- Topic 4-4: Development and Design Effective Electronic Presentation Materials
- Topic 4-5: Effective Use of Audiovisual Equipment
- Topic 4-6: Developing Accessible Instructional Aids and Alternate Media
- Topic 4-7: Media Conversion and Alternatives

Unit 5: Photography and Videography
- Topic 5-1: Photography
- Topic 5-2: Videography

Unit 6: Managing the Learning Environment
- Topic 6-1: Classroom Teaching Learning Environments
- Topic 6-2: Emerging Technologies in Adult Education
- Topic 6-3: E-Learning

Unit 7: Student Teaching Demonstrations
- Topic 7-1: Conducting Teaching Demonstration
- Topic 7-2 Evaluating Student Instructor Lesson Demonstrations

*This is an abbreviated Course Plan. Terminal & Enabling Objectives can be found on the full version located on the SFT Curriculum page of the SFT website at: http://osfm.fire.ca.gov/training/SFTCurriculum.php

**Hours:** 40

**Designed For:** Instructors and supervisors who are responsible for evaluating performance

**Description:** This course provides the instructor/supervisor with the techniques of evaluation. Course includes: Construction of written and performance tests, as well as test planning, test analysis, test security, and evaluation of test results to determine instructor and student effectiveness. Essential course for writing valid, objective tests.

**Prerequisites:** Fire Instructor 1A, Fire Instructor 1B or Training Instructor 1A, Training Instructor 1B, Training Instructor 1C

**Certification:** Fire Instructor II

**Class Size:** 40

**Restrictions:** None

Fire Instructor 3: Master Instructor Competency Evaluation (2010)

Hours: 36
Designed For: Future instructors for Training Instructor 1A, 1B, and 1C courses
Description: This course provides information necessary to deliver the Training Instructor 1A, 1B, and 1C courses and gives additional instruction in classroom communications. Successful completion of the class requires each student to adapt a current Training Instructor cognitive lesson plan and deliver a 30-minute teaching demonstration. This course is mandatory for a person who desires to teach any of the Instructor Series Courses.

Prerequisites: One of the following four Level 1 options:
1) Fire Instructor 1A and Fire Instructor 1B
2) Fire Instructor 1A, Training Instructor 1A, and Training Instructor 1C
3) Fire Instructor 1B, Training Instructor 1B, and Training Instructor 1C
4) Training Instructor 1A, Training Instructor 1B, and Training Instructor 1C

Certification: Fire Instructor III
Class Size: Maximum: 25

Restrictions: The Primary Instructor for this course must be a registered Senior Master Instructor.

### REQUIRED STUDENT MATERIALS

- Fire and Emergency Services Instructor *Purchased separately by the student, not included in the course registration fee
- Fire Instructor 3 Student Supplement
- Training Instructor 1A Instructor Guide and Student Supplement *
- Training Instructor 1B Instructor Guide and Student Supplement *
- Training Instructor 1C Instructor Guide and Student Supplement *

INSTRUCTOR COURSES

COURSE INFORMATION AND REQUIRED MATERIALS

January 2019

Course: Instructor I: Instructional Methodology (2014)
Hours: 40 (see course plan for breakdown)
Designed For: Personnel preparing for a college level fire instructor, Company Officer, or SFT Certified Training Instructor position
Description: This course provides the skills and knowledge needed for the entry level professional instructor to perform his or her duties safely, effectively, and competently. The curriculum is based on the 2012 edition of NFPA 1041 Standard for Fire Service Instructor Professional Qualifications. At the end of this course, candidates for Instructor I certification will be able to teach and deliver instruction from a prepared lesson plan utilizing instructional aids and evaluation instruments. The Instructor I will also be able to adapt a lesson plan and complete the reporting requirements to the local jurisdiction.
Prerequisites: None, but the following courses are recommended:
- Introduction to the Incident Command System (IS-100.B), FEMA
- National Incident Management System (IS-700.A), FEMA
Certification: Instructor I
Standard: Complete all group activities and formative tests. Pass all individual activities without omitting critical criteria as identified on the activity sheet.
Class Size: 20; (16 students per lab section) 32
Student/Instructor Ratio: 20:32:1, plus additional skills evaluators as needed to maintain 16:1 ratio for psychomotor teaching demonstrations.
Restrictions: None. However, instructor’s must submit letter for approval of conditions outside the parameters of normal classroom instruction, e.g. class size exceeds 20, compressed course delivery, distance learning format.

### Description:
This course provides the skills and knowledge needed for the intermediate level professional instructor to perform his or her duties safely, effectively, and competently. The curriculum is based on the 2012 edition of *NFPA 1041 Standard for Fire Service Instructor Professional Qualifications* and the 2012 edition of *NFPA 1403 Standard on Live Fire Training Evolutions*. At the end of this course, candidates for Instructor II certification will be able to develop lesson plans and evaluation instruments, teach and deliver instruction, and evaluate and coach other instructors. The Instructor II will also be able to analyze resources and formulate a program budget.

### Prerequisites:
- **Instructional Methodology**  
- **Introduction to the Incident Command System (IS-100.B), FEMA** OR **National Incident Management System (IS-700.A), FEMA**
- **1. Instructor I: Instructional Methodology; OR Training Instructor 1A and 1B; OR Fire Instructor 1A and 1B**  
- **2. Introduction to the Incident Command System (IS-100.B), FEMA; OR National Incident Management System (IS-700.A), FEMA**

### Certification:
- Instructor II

### Standard:
Complete all group activities and formative tests. Pass all individual activities without omitting critical criteria as identified on the activity sheet.

### Class Size:
**2032**: (16 students per lab section)

### Student/Instructor Ratio:
2032:1, plus additional skills evaluators as needed to maintain 16:1 ratio for psychomotor teaching demonstrations.

### Restrictions:
None. However, instructor’s must submit letter for approval of conditions outside the parameters of normal classroom instruction, e.g. class size exceeds 20, compressed course delivery, distance learning format.

- **Topic 1-2: Instructor II Certification Process**
INSTRUCTOR II COURSE CONTENT (cont’d)

- Topic 1-3: Definitions of Duty

Unit 2: Instructional Development
- Topic 2-1: Creating Lesson Plans
- Topic 2-2: Modifying Lesson Plans

Unit 3: Instructional Delivery
- Topic 3-1: Conducting Classes and Conference Sessions
- Topic 3-2: Supervising Training Activities

Unit 4: Evaluation and Testing
- Topic 4-1: Developing Student Evaluation Instruments
- Topic 4-2: Developing a Class Evaluation Instrument

Unit 5: Program Management
- Topic 5-1: Scheduling Instructional Sessions
- Topic 5-2: Formulating Budget Needs
- Topic 5-3: Acquiring Training Resources
- Topic 5-4: Coordinating Record-Keeping
- Topic 5-5: Evaluating Instructors
### INSTRUCTOR III COURSE CONTENT*

**Unit 1: Introduction**
- Topic 1-1: Orientation and Administration
- Topic 1-2: Instructor III Certification Process
- Topic 1-3: Definition of Duty

**Unit 2: Course and Curriculum Development**
- Topic 2-1: Conduct an Instructional Needs Analysis
- Topic 2-2: Design Programs or Curriculum
- Topic 2-3: Modify Existing Curriculum
- Topic 2-4: Write Program and Course Goals
- Topic 2-5: Write Course Objectives
- Topic 2-6: Construct a Course Content Outline

**Unit 3: Managing the Evaluation System**
### INSTRUCTOR III COURSE CONTENT*

- Topic 3-1: Develop Program and Course Evaluation Plans
- Topic 3-2: Construct a Performance-based Instructor Evaluation Plan
- Topic 3-3: Analyze Student Test Instruments
- Topic 3-4: Develop a System for the Acquisition, Storage, and Dissemination of Test Results

#### Unit 4: Training Program Management
- Topic 4-1: Administer a Training Record System
- Topic 4-2: Develop Training Program Policy Recommendations
- Topic 4-3: Select Instructional Staff
- Topic 4-4: Write Specifications for Equipment Purchasing
- Topic 4-5: Present Evaluation Findings, Conclusions, and Recommendations

Training Instructor 1B: Psychomotor Lesson Delivery (2010)

Hours: 40

Designed For: Personnel preparing for a Company Officer, SET Registered Instructor, or Training Officer position

Description: This is the second of a three-course series. Topics include methods/techniques for training with the latest concepts in career education; selecting, adapting, organizing, and using instructional materials appropriate for teaching psychomotor lessons; criteria and methods to evaluate teaching and learning efficiency; and an opportunity to apply major principles of learning through teaching demonstrations. Two (2) student instructor teaching demonstrations are required of all.

Prerequisites: Training Instructor 1A

Certification: Fire Officer

Class Size: Maximum: 32

Classes larger THAN 16 students require either another Master Instructor or a qualified evaluator to assist with evaluating the student instructor teaching demonstrations.

Restraint: None

**TRAINING INSTRUCTOR 1B: PSYCHOMOTOR LESSON DELIVERY**

Course Objectives: To provide the student with:

- A variety of methods and techniques for training in accordance with the latest concepts in career education.
- Information to select, adapt, and use instructional materials appropriate for teaching psychomotor lessons.
- Criteria and methods to evaluate teaching and learning efficiency.
- An opportunity to apply major principles of learning through teaching demonstrations.

Training Instructor 1C: Instructional Development Techniques (2010)

Hours: 40

Designed For: Personnel preparing for SFT Registered Instructor or Training Officer position

Description: This is the third of a three-course series. Topics include methods and techniques for developing lesson plans, ancillary components, and tests in accordance with the latest concepts in career education. The course offers the opportunity to develop, receive feedback, and finalize instructional materials and deliver a teaching demonstration. Two (2) student instructor teaching demonstrations are required of all.

Prerequisites: Training Instructor 1A, Training Instructor 1B

Certification: Training Instructor

Class Size: Maximum: 32

Restrictions: None

### Course Information and Required Materials

**January 2019**  
**May 2015**

**Course:** Techniques of Evaluation (2017)  
**Hours:** 32  
**Designed For:** Personnel preparing for a college level fire instructor, SFT Certified Training Instructor position, or career development for teaching SFT Instructional Curriculum.  
**Description:** This course provides the skills and knowledge needed for the intermediate level professional instructor to perform his or her duties safely, effectively, and competently. The curriculum is based on the 2012 edition of NFPA 1041 Standard for Fire Service Instructor Professional Qualifications and the 2012 edition of NFPA 1403 Standard on Live Fire Training Evolutions. At the end of this course, candidates for Instructor II certification will be able to develop lesson plans and evaluation instruments, teach and deliver instruction, and evaluate and coach other instructors. The Instructor II will also be able to analyze resources and formulate a program budget.

**Prerequisites:** Instructor I and Instructor II recommended  
**Certification:** FSTEP: Instructor Development Series  
**Standard:** Complete all group activities and formative tests. Pass all individual activities without omitting critical criteria as identified on the activity sheet.

**Max. Class Size:** 25  
**Student/Instructor Ratio:** 25:1 Lecture  
**Restrictions:** None. Instructor must submit letter for approval of conditions outside the parameters of normal classroom instruction, e.g. class size exceeds 25, compressed course delivery, distance learning format.

**Techniques of Evaluation Course Outline**

**Unit 1: Introduction**
- Topic 1-1: Orientation and Administration
- Topic 1-2: Instructor Certification Process
- Topic 1-3: Definition of Duties

**Unit 2: Federal and State Vocational Laws**
- Topic 2-1: Performance Based Accountability in Federal Law
- Topic 2-2: State and Federal Law Implications to Training
Unit 3: Principles of Evaluation
- Topic 3-1: Review Purposes and Principles of Testing
- Topic 3-2: Approaches to Student Assessment
- Topic 3-3: Test Classifications

Unit 4: Planning Evaluation and Assessment
- Topic 4-1: Test Planning
- Topic 4-2: Test Adaptation
- Topic 4-3: Performance Testing

Unit 5: Methods of Evaluation
- Topic 5-1: Cognitive Evaluation
- Topic 5-2: Psychomotor Evaluation

Unit 6: Construction and Use of Cognitive Evaluation Instruments
- Topic 6-1: Constructing Multiple-Choice Tests
- Topic 6-2: Constructing True-False Tests
- Topic 6-3: Constructing Matching Tests
- Topic 6-4: Constructing Short-Answer (Completion) Tests
- Topic 6-5: Constructing Essay Tests
- Topic 6-6: Constructing Interpretive Exercises

Unit 7: Construction and Use of Psychomotor Evaluation Instruments
- Topic 7-1: Constructing Performance Evaluations

Unit 8: Administering Evaluations and Assessments
- Topic 8-1: Managing Evaluation Systems
- Topic 8-2: Administering Evaluations
- Topic 8-3: Test and Item Analysis
- Topic 8-4: Compliance with Laws Addressing Special Accommodations
- Topic 8-5: Administering Course Evaluations
- Topic 8-6: Reporting of Test Administration

*This is an abbreviated Course Plan. Terminal & Enabling Objectives can be found on the full version located on the SFT Curriculum page of the SFT website at: http://osfm.fire.ca.gov/training/SFTCurriculum.php
Explosives Recognition and Reconnaissance

**Hours:** 40
**Designed For:** Fire investigators and law enforcement personnel
**Description:** Designed to instruct on the identification, description, and evaluation of explosives and fireworks, and to cover applicable laws and regulations. Stresses legal preplanning for EOD incidents, bomb threat incident response, blast mitigation, scene safety and security, evacuation protocols and scene search techniques. Does not involve handling of any explosives.

**Prerequisites:** Employment with a public safety agency or response to EOD incidents
**Certification:** None
**Class Size:** 40
**Restrictions:** This course is scheduled and taught by SFM Arson and Bomb Investigators only.

### FIRE INVESTIGATION 1A COURSE OUTLINE

**Course Objectives:**

- To provide the student with...
- To provide students with an overview of fire investigative practices and responsibilities associated with fire origin and cause.
- To provide students with technical information enabling them to determine the area of fire origin.
- To provide students with background information that will lead them to develop an opinion of the fire cause.
- To provide students with technical information on the State's arson laws and legal aspects of fire scene investigation.

**Course Information and Required Materials**

**January 2019 - May 2015**

**Course:** Fire Investigation 1A: Basic Fire Investigation (2017)

**Hours:** 39.30 (see course plan for breakdown)

**Designed For:** Fire investigators and law enforcement officers responsible for conducting fire investigations

**Description:** This course provides information on securing the fire scene and determining the origin and cause of the fire. Topics include responsibilities of a fire investigator, securing the fire ground, conducting an exterior and interior survey, analyzing fire patterns, interpreting individual fire patterns, discriminating the effects of explosions, examining and removing fire debris, reconstructing the area of origin, inspecting the performance of building systems. The 2014 edition of NFPA 1033 Standard Professional Qualifications for Fire Investigator is the basis for this course.

**Prerequisite:** Fire Behavior and Combustion (California Community College core curriculum)

**Corequisites:**
- Basic Electricity (CFITrainer.net)
- Ethics and the Fire Investigator (CFITrainer.net)

**Certification:**
- Fire Investigator (February 2017)

**Standard:** Complete all activities. Complete the summative test with a minimum score of 80%.

**Max. Class Size:** 40

**Student/Instructor Ratio:**
- 40:1 (lecture)
- 10:1 (activity)

**Restrictions:** Air Quality Management District permit (if required)
- Burn cubicles sufficient to accommodate the 1:10 instructor/student ratio
- Staffed fire suppression equipment

- Topic 1-1: Orientation and Administration
- Topic 1-2: Fire Investigator Certification Process
• Topic 1-3: Responsibilities of a Fire Investigator

Unit 2: Legal Considerations

• Topic 2-1: Gathering Reports and Records for a Legal Proceeding
• Topic 2-2: Evaluating the Investigative File
• Topic 2-3: Coordinating Expert Resources
• Topic 2-4: Formulating an Opinion
• Topic 2-5: Presenting Investigative Findings
• Topic 2-6: Testifying During Legal Proceedings

*This is an abbreviated Course Plan. Terminal & Enabling Objectives can be found on the full version located on the SFT Curriculum page of the SFT website at: http://osfm.fire.ca.gov/training/SFTCurriculum.php

**Hours:** 40

**Designed For:** Fire investigation personnel

**Description:** This course provides information on conducting an explosive investigation and a surveillance operation, preparing a search warrant, testifying as an expert witness, assembling a curriculum vitae, and properly documenting a criminally caused fire. In addition, each student will be assigned to an investigative team to conduct an investigation of their own criminally caused fire. During this practical exercise, each team will be required to conduct the scene investigation, properly collect and document supportive evidence, prepare their written case report, and present their finding to a district attorney and a judge to review.

**Prerequisites:** Fire Investigation 1A, Fire Investigation 1B

**Certification:** Fire Investigator II

**Class Size:** 30 (24 optimum)

**Restrictions:** None

### FIRE INVESTIGATION 2A COURSE OUTLINE

**Course Objectives:** To provide the student with...

- Information to differentiate between the three effects of an explosion.
- Information and techniques to establish an arson corpus after examining a practical fire scene.
- A fire scene to examine and determine the appropriate evidence to support a fire cause.
- Information to appraise an explosion scene to determine if a criminal act has occurred.
- Techniques to organize their case investigation utilizing proper case reports, court exhibits, and testimony.
- The four different methods of heat transfer in order to compare their effects during a practical situation.
- Information to differentiate between the U.S. Supreme Court’s findings and California State Supreme Court requirements in preparing a search warrant and apply the rules appropriately to a practical situation.
- Applicable California Arson Law section(s) pertaining to a practical situation.
- Information to recognize the elements necessary for the ignition and the sustained combustion of fuel and heat in a practical situation.
- Common scene indicators of arson and their applicability to a practical situation.
- The methodology and procedures required for a proper surveillance operation.

**Course Content:**

- Orientation and Administration ......................................................... 40:00
- Explosion Investigation ........................................................................... 1:00
- Surveillance Investigations ............................................................... 3:00
- Resume Reviews ...................................................................................... 3:00

### FIRE MANAGEMENT 1 COURSE OUTLINE

**Course Objectives:** To provide the student with...
- Information for the transition from fire fighter to fire officer by presenting the skills and responsibilities required of first level supervisors.
- A summary of how internal and external influences affect the fire officer and how to effectively deal with these influences.
- An overview of supervision, management, and leadership concepts, practices, and theories.
- A summary of the advantages, disadvantages, and effects of various recognized styles of leadership and leadership profiles.
- A summary of common emotional and behavioral characteristics of an individual or working group as it applies to the responsibility of subordinates and supervisors.
- An overview of basic supervisory, managerial, and leadership skills required in decision making, delegating, personnel motivation, communicating, time management, resource management, record keeping, team building, disciplinary functions, and dealing with change and stress.
- Examples of the following techniques used by supervisors in managing personnel: conducting interviews, counseling, controlling work activities, goal setting, evaluating, promoting affirmative action, and managing the work place environment.
- A summary of the effects, interpretation, implementation, and development of policies and procedures and the necessity for accuracy, clarity, and impartiality.

### FIRE MANAGEMENT 2C COURSE OUTLINE

**Course Objectives:** To provide the student with...
- Techniques to make the transition from supervisor to manager.
- Information on the significant, competitive, legal and social issues that affect productivity, quality of life, and organizational success.
- Information on major legislation that impacts personnel, such as the Civil Rights Act, Equal Pay Act, Occupational Safety and Health Act.
- Information on employment tools needed to manage human resources effectively, including job analysis and design, human resource planning, and employee development.
- Information on current compensation and motivation practices used by organizations to improve employee performance and productivity.

**Course Content:**

#### Unit 1: Environment
- The Legal Context of Employment Decisions.
- Diversity at Work.

#### Unit 2: Employment
- Analyzing Work and Planning for People.
- Recruiting.
- Staffing.

#### Unit 3: Development
- Workplace Training.
- Performance Management.
MANAGING CAREERS

Unit 4: Compensation
  Pay and Incentive Systems
  Indirect Compensation: Employee Benefit Plans.

Unit 5: Labor-management Accommodation
  Union Representation and Collective Bargaining.
  Procedural Justice and Ethics in Employee Relations

Unit 6: Support and International Implications
  Safety, Health, and Employee Assistance Programs.
  International Dimensions of Human Resource Management

Unit 7: Contemporary Issues Relating to Personnel and Labor Relations Instructor-developed Summative Test
Fire Management 2D: Strategic Planning (2009)

Hours: 40

Designed For: Chief Officers, Company Officers, Fire Service Managers, and City Managers/County Administrative Officers and Planners

Description: Designed to educate Chief Officers on the strategic planning process and why each of the steps is critical for success. Although the process may be thought of as extremely complicated, this course will provide advice and tools to assist in the strategic planning process. This course is intended to be consistent with critical elements of the accreditation process and its associated self-assessment manual.

Prerequisites: Fire Management 1

Certification: Chief Officer

Volunteer Fire Service Management Course Outline

- None

Hours: 8:00

Designed For: The emergency vehicle technician pursuing SFT-certification or anyone seeking an overview of the roles and responsibilities of an emergency vehicle technician

Description: This course provides an overview of the roles and responsibilities of an emergency vehicle technician from entry-level technician knowledge and skills to personnel and fleet management.

Prerequisites: None

Certification: Emergency Vehicle Technician I

Standard: Complete all summative test with a minimum score of 80%.

Max. Class Size: 40

Restrictions: None

REQUIRED STUDENT MATERIALS

- NFPA 1071: Standard for Emergency Vehicle Technician Professional Qualifications
- NFPA 1500: Standard on Fire Department Occupational Safety and Health Program
- NFPA 1901: Standard for Automotive Fire Apparatus
- Student Supplement

REQUIRED INSTRUCTOR MATERIALS

- NFPA 1071: Standard for Emergency Vehicle Technician Professional Qualifications (physical copy)
- NFPA 1500: Standard on Fire Department Occupational Safety and Health Program (physical copy or access to digital copy)
- NFPA 1901: Standard for Automotive Fire Apparatus (physical copy)
- NFPA 1911: Standard for the Inspection, Maintenance, Testing, and Retirement of In-Service Emergency Vehicle (physical copy)
- Student Supplement

**Course Information and Required Materials**

**Course: Fire Mechanic 1: Fire Pumps and Accessories (2004)**

**Hours:** 36

**Designed For:** Entry-level fire apparatus mechanics

**Description:** This course provides the fire apparatus mechanic with the skills necessary to maintain, overhaul, test, and troubleshoot fire pumps and accessories.

**Prerequisites:** None

**Certification:** Fire Mechanic I

**Max Class Size:** 40

**Restrictions:** This course is scheduled and taught by Fire Mechanic Academy staff only.

**FIRE MECHANIC 1 COURSE OUTLINE**

Course Objectives: To provide the student with...
- The principles and theories associated with the maintenance and operational pump testing required for fire apparatus and equipment.
- An opportunity to troubleshoot.
- An opportunity to receive specialized and on-the-job training.

Course Content: 36:00
- Pump Identification (8:00)
- Theory (8:00)
- Demonstration and Lab (12:00)
- Troubleshooting (6:00)
- Testing (2:00)
Course Information and Required Materials

Hours: 36

Designed For: Advanced-level fire apparatus mechanics

Description: This course includes topics on the theory, operation, and maintenance of electrical systems currently being used in fire apparatus.

Prerequisites: Fire Mechanic 1

Certification: Fire Mechanic II

Max Class Size: 40

Restrictions: This course is scheduled and taught by Fire Mechanic Academy staff only.

REQUIRED STUDENT MATERIALS

- Student Manual

REQUIRED INSTRUCTOR MATERIALS

- Instructor Guide

FIRE MECHANIC 2A COURSE OUTLINE

Course Objectives: To provide the student with...

- Theory, operation, and maintenance information on electrical systems currently being used in ambulance and fire apparatus.
- The principles and theories associated with maintenance required for ambulance and fire apparatus and equipment.
- An opportunity to receive specialized and on-the-job training.

Course Content

Theory of Electron Flow, Principles of Current, Voltage, Resistance, Ohm's Law; Series, Parallel, Series/Parallel Circuits, Principles of Diodes and Transistors ............................................ 12:00
Design and Construction, Ratings, Charging, Evaluation/Selection and Testing of Batteries ............... 4:00
Design and Construction, Voltmeter, Ammeter, Ohmmeter, Application, Reading and Ratings of Meters ........................................................................................................ 4:00
Design and Operation, Heavy Duty Ratings, Pulley and Belt Loop, Load Requirements
And Diagnosis of Alternators ............................................................................................ 4:00
Design and Operation, Switches and Solenoids, Mounting, Heavy Duty Applications,
And Diagnosis of Cranking Motors .................................................................................. 4:00
Load Analysis, CCA Wiring, Fusing, Looming, Installation, and Repair Techniques
Of Electrical Systems ....................................................................................................... 4:00
Failure Analysis, Diagnostic Approaches, Computer Learn and Resets, Computer
Wake-Up Memory and Instrumentation of Component Systems ................................. 2:00
Testing ............................................................................................................................ 2:00

Hours: 36

Designed For: Advanced-level fire apparatus mechanics

Description: This course covers introduction, general construction, and application of Allison Transmission.

Hands-on activities include complete tear down, subassembly tear down, hydraulics, power flows, and complete transmission rebuild. Troubleshooting and maintenance is covered also.

Prerequisites: Fire Mechanic 1

Certification: Fire Mechanic II

Max Class Size: 40

Restrictions: This course is scheduled and taught by Fire Mechanic Academy staff only.

Course Objectives: To provide the student with...

- Information on the application and general construction of the Allison transmission.
- Hands-on training in complete transmission teardown and rebuild, subassembly tear down, hydraulics, power flows, troubleshooting, parts, and maintenance procedures.
- The principles and theories associated with maintenance required for fire apparatus and equipment.
- An opportunity to receive specialized and on-the-job training...

**Course Information and Required Materials**

**January 2019**

**Course:** Company Officer 2C: Fire Inspections and Investigations (2014)

**Hours:** 40 (see course plan for breakdown)

**Designed For:** Aspiring company officers

**Description:** This course provides information on conducting inspections, identifying hazards and addressing violations, performing a fire investigation to determine preliminary cause and securing the incident scene and preserving evidence.

**Prerequisites:** Meet the educational requirements for Fire Fighter II Certification:
- Fire Officer (Level I and II)

**Standard:** Complete all activities and formative tests. Complete all summative tests with a minimum score of 80%.

**Class Size:** 32

**Restrictions:** None

- Topic 3-2: Analyzing Egress Elements
- Topic 3-3: Proposing Correction for Egress Deficiencies

Unit 4: Emergency Plans and Procedures
- Topic 4-1: Recommending Criteria for Developing Emergency Plans and Procedures
- Topic 4-2: Evaluating Emergency Planning and Preparedness Procedures

Unit 5: Occupant Loads
- Topic 5-1: Computing Maximum Allowable Occupancy Loads
- Topic 5-2: Computing the Maximum Occupant Load of a Multi-Use Building
- Topic 5-3: Assessing Alternative Methods to Adjust Occupant Loads

Unit 6: Building Construction
- Topic 6-1: Verifying Building Construction and Construction Type
- Topic 6-2: Evaluating Construction Type of an Addition or Remodel

Unit 7: Fire Growth Potential
- Topic 7-1: Determining Fire Growth Potential
## Course Information and Required Materials

**Course:** Fire Inspector 2C: Inspecting New and Existing Fire & Life Safety Systems and Equipment (2010)

**Hours:** 16

**Designed For:** The certified Fire Inspector I advancing to the Fire Inspector II classification

**Description:** This course provides students with a basic knowledge of inspection requirements related to the roles and responsibilities of a Fire Inspector II including inspection of life safety systems and building services equipment, fire protection systems, and emergency access criteria.

**Prerequisites:** Fire Inspector 2A: Fire Prevention Administration

**Certification:** Fire Inspector II

**Standard:** Complete all summative tests with a minimum score of 80%. Complete all activities and formative tests.

**Max. Class Size:** 30

**Restrictions:** None

PREVENTION 1 COURSE OUTLINE

Unit 1: Introduction
- Topic 1-1: Orientation and Administration
- Topic 1-2: Company Officer Certification Process

Unit 2: The Company Officer’s Role in Fire Prevention
- Topic 2-1: Relationship Between Historic and Current Fire Problems
- Topic 2-2: National Fire Incident Reporting System
- Topic 2-3: Community Risk Analysis
- Topic 2-4: Basic Elements of Fire and Life Safety Education and Public Relations
- Topic 2-6: Authority and Responsibility for Company Inspections and Related Activities

Unit 3: Relationship Between Life Safety and Building Construction
- Topic 3-1: Occupancy Classifications and Related Hazards
- Topic 3-2: Building Construction Types and Fire Behavior
- Topic 3-3: Developing a Pre-Incident Plan

Unit 4: Elements of a Company Inspection Program
- Topic 4-1: Importance of Conducting a Fire Inspection
- Topic 4-2: Code Enforcement and Appeal Process
- Topic 4-3: Construction Features that Affect Fire, Heat, and Smoke Spread in a Building
PREVENTION 1 COURSE OUTLINE (cont’d)

- Topic 4-4: Fire Inspection Records, Reports, and Forms
- Topic 4-5: Conducting a Company Fire Inspection
- Topic 4-6: Inspecting the Exterior of a Structure
- Topic 4-7: Inspecting the Interior of a Structure
- Topic 4-8: Inspecting Fire Alarm Detection and Notification Systems
- Topic 4-9: Inspecting Fire Protection Systems and Equipment
- Topic 4-10: Inspection Follow-up Procedures
- Topic 4-11: Standby Life Safety Duty

Unit 5: Complex Hazards
- Topic 5-1: Inspecting Complex Hazards and Fire Safety Requirements
- Topic 5-2: Hazardous Materials
- Topic 5-3: Inspections in the Wildland-Urban Interface Environment

**Hours:** 40

**Designed For:** Fire prevention officials and plan checkers

**Description:** This course offers an explanation and analysis of the functions and capabilities of a hydraulically calculated sprinkler system. Participants will learn and practice with the various methods used to perform hydraulic calculations.

**Prerequisites:** Fire Inspector 1A, 1B, 1C, and 1D OR Fire Prevention 1A and 1B

**High School Algebra or College Math**

**Certification:** Plans Examiner

**Class Size:** 40

**Restrictions:** None

SFT State Fire Training Bookstore (916-445-8158)

**FIRE PREVENTION 3A COURSE OUTLINE**

Course Objectives: To provide the student with:

- Information and analysis of the functions and capabilities of a hydraulically calculated sprinkler system.

To identify Course Content: 40:00

- Concepts of Hydraulics in Fire Protection Systems
- Glossary of Terms and Definitions
- System Piping and Fittings
- Water Supply
- Classification of Occupancies
- Allowable Head Coverage
- Most Remote Area
- K-Factor
- Minimum and Head Pressure and Flow
- Friction Loss
- Hydraulic Calculation
- Trees, Loops and Grids
- Advanced Concepts
- Instructor-developed Summative Test
Interim List for Fire Prevention Courses

Hours: 40

Designed For: Fire prevention officials and allied professionals responsible for plan review

Description: This course provides hands-on training. Topics include codes, standards and local amendments, site plan review, building construction and characteristics, fire protection equipment, multi-family occupancies, commercial buildings, care facilities, drinking/dining facilities, shopping malls, and high-rise buildings.

Prerequisites: Fire Inspector 2A, 2B, 2C, and 2D OR Fire Prevention 2B

Certification: Plans Examiner

**FIRE PREVENTION 3B COURSE OUTLINE**

Course Objectives: To provide the student with:

- Hands-on training for Plan Reviewers.
- Information on codes, standards, and local amendments.
- Information on site-plan review, building construction, and fire protection equipment.
- Information on plan review for various occupancy classifications.

To identify Course Content ........................................................................................................ 40:00

Intertipotion to Plans and Plans Review
Use of Check Sheets, Plans, Rules, Other Tools and Equipment
Components of A-Plan
Site Plan Review
Location of Buildings
Accessibility
Water Supply
Terrain
Plan Check Guides
Plan Review of Group B Occupancy
Plan Review of Group I Occupancy
Full Plan Check of Day Care Center
Plan Correction Techniques Instructor-developed Summative Test

### FIREWORKS ENFORCEMENT/SPECIAL EFFECTS COURSE OUTLINE

| None       |
Course: Motion Picture/Television Fire Safety Officer

Hours: 24

Designed For: Fire personnel, suppression and investigation officers, special effects technicians, film production safety coordinators, and stunt coordinators, line producers, directors, location managers, and film commissioners, insurance risk managers and other governmental officials who interact with the entertainment industry in a safety capacity.

Description: This course provides the student with a basic knowledge of film production safety, both on the studio lot and location filming. Topics areas covered include: Filming and fire code permits, licensing, safety officer responsibilities, who’s who on location, the role of the safety officer, fire safety hazards associated with lighting generators, electrical cabling, set construction, studio vs. and warehouse filming, pyrotechnic special effects law and regulations (handling, use, storage and transportation), and stunt safety. In addition, the trainingThis course incorporates pyrotechnic special effects and stunt demonstrations, special guest speakers, product orientation and slides and video from many different films. Guest speakers are also a part of the program.

Prerequisites: None

Certification: None

Class Size: 40-75

Restrictions: This course is scheduled and taught by approved OSFM Fire Engineering staff only.

**Course:** Outdoor Aerial Public Fireworks Display (2014)

**Hours:** 7

**Designed For:**
Fire prevention, suppression, public education, fire investigation and law enforcement personnel with pyrotechnic public display enforcement responsibilities. Also, Pyrotechnic Operator – Basic Commercial Technicians, show designers, producers and unlicensed assistants.

**Description:**
Educate and inform both public safety agencies and the private sector interests regarding Outdoor Aerial Public Display Fireworks safety in California. Discuss and demonstrate the proper use, handling, storage, and transportation of display fireworks within the industry. Provide a leadership role in educating local government agencies throughout the State by standardizing regulatory safety requirements for outdoor aerial public display fireworks. Review laws and regulations governing permits, licensure, inspection practices, pre and post display. Course incorporates outdoor aerial fireworks display demonstration.

**Prerequisites:** None

**Max. Class Size:** 75

**Restrictions:** This course is scheduled and taught by approved OSFM staff only.

Course: Confined Space Rescue Technician (2008)

Hours: 40

Designed For: All emergency personnel with confined spaces within their jurisdiction

Description: This course is an intensive hands-on training program that will prepare you to respond to confined space emergencies. This course of instruction prepare the student in identifying confined spaces and permit-required confined spaces, the hazards associated with permit required confined spaces, target industries and hazards, state and federal regulations, components of a rescue operation, and the roles and responsibilities of the rescue team.

Prerequisites: Confined Space Rescue Awareness

Certification: None

Max. Class Size: 36

Student/Instr. Ratio: 12:1

36 student max: Three-squad site with 3 Primary Instructors and 1 Senior Instructor
24 student max: Two-squad* site with 2 Primary Instructors and 1 Senior Instructor
12 student max: One-squad* site with 1 Primary Instructors and 1 Senior Instructor

*For 1 or 2-squad sites, the Senior Instructor may also function as a Primary Instructor

Restrictions: This course can only be delivered at an accredited SFT Rescue Training site.

Course Objectives: To provide the student with...

- Information on regulations and standards for entry into confined spaces
- Information to identify confined spaces and permit-required confined spaces
- Information to identify the hazards associated with confined spaces
- Techniques to perform confined space rescue on incidents involving terrorism or weapons of mass destruction
- Information and techniques to select and use atmospheric monitoring equipment and the equipment necessary to control hazards in confined spaces
- Information and techniques to identify, select, and use personal protective equipment
- Information and techniques to use various types of victim removal and packaging systems
- Information and techniques to construct rope rescue systems for confined space rescue
- The information necessary to plan, organize, operate, and command at confined space rescue incidents
- The opportunity to apply the principles of confined space rescue through directed rescue scenarios

CONFINED SPACE RESCUE TECHNICIAN ACCREDITED TRAINING SITE REQUIREMENTS

An accredited Confined Space Rescue Technician (CSRT) Training Site has facilities, structures, work areas, materials, props, tools, and equipment of adequate size, type, and quantity to fully and safely support the cognitive and psychomotor training required to deliver the CSRT curriculum.

SITE CAPACITY

A CSRT Training Site is evaluated on its ability to deliver the required training to a maximum of 36 students. Each capacity level represents the maximum number of students or squads that may be taught on the site at any given time. This maximum number will be determined based on the suitability of the site to safely train between 12 and 36 students.

One-squad Site
- Supports the instruction for teaching the maximum of one (1) squad or twelve (12) students.
- One (1) CSRT Primary Instructor is required for a student instructor ratio of 12:1.
- One (1) CSRT Senior Instructor is required.
- For one-squad sites, the Senior Instructor may also function as the Primary Instructor.

Two-squad Site
- Supports the instruction for teaching the maximum of two (2) squads or twenty-four (24) students.
- One (1) CSRT Primary Instructor.
- One (1) CSRT Senior Instructor are required for a student instructor ratio of 12:1.
- For two-squad sites, the Senior Instructor may also function as a Primary Instructor.

Three-squad Site
- Supports the instruction for teaching the maximum of three (3) squads or thirty-six (36) students.
- Three (3) CSRT Primary Instructors are required for a student instructor ratio of 12:1.
- One (1) CSRT Senior Instructor is required.

MINIMUM SITE REQUIREMENTS

The accredited CSRT Training Site assumes all responsibility, liability, and maintenance for the engineering design, strength, stability, and adequacy of all props, including anchor points and tie-offs. The requesting agency further assumes all responsibility, liability, and maintenance for all tools, equipment, and supplies used at the site for the delivery of a CSRT class. This includes, but is not limited to, ladders, ropes, rescue hardware and software.

Facilities
- Classroom of adequate size and capability (including audiovisual equipment) to support classroom cognitive training.
- Wash areas.
- Bathrooms.
- Rehabilitation area.
- Safe and adequate parking.

Training Props

Aboveground Tank
- Aboveground tank (minimum 8 feet high) with a vertical (top) entry through a portal of 18” to 30” and a horizontal (side) entry through a portal of 18” to 30”.

Underground Vault
• While belowground vaults are preferred, it will be acceptable to place vaults at ground level and provide platforms to simulate ground level for placing tripods or other equipment on.
• Vertical drop from the entry point must be greater than 5 feet.

**Tapered Cross Section**
• An internal configuration of inwardly converging walls or a floor that slopes downward and tapers to a smaller cross-section.
• Entry may be vertical or horizontal, but must be above the section that tapers downward.

**Horizontal Pipe**
• Below grade or aboveground pipes between 18” and 36” in diameter.
• A minimum of 25 feet of continuous pipe shall be provided with at least one 45-degree or 90-degree bend.

**Lock-out/Tag-out**
• One or more of the above listed spaces shall include a lock-out/tag-out prop as part of the evolution.

**Permit-Required Confined Spaces**
• Minimum training prop requirements can be fulfilled by using actual permit-required confined spaces or representative spaces.

**Opening Size**
• One portal of entry on any of the above props shall be less than 24”.
• Opening size is determined by measuring the shorter side of the opening.

**EQUIPMENT STANDARDS**

The following is the minimum equipment required to deliver a CSRT course. As the class size increases, the amount of equipment must increase. Refer to ENDNOTES for additional information.

ENDNOTES

A. One (1) generator is required for each scenario. If there is a readily available power supply, an additional generator would not be needed.

B. As needed to supply power to necessary equipment.

C. A minimum of one (1) atmospheric monitor is required for each scenario. Four (4) gas monitors are recommended, but separate monitors that detect O₂ levels, flammable gases, and toxic gases that would be expected in the spaces to be entered would suffice. One (1) monitor should have a pump and extension hose for pre-entry assessment. A second monitor can be a diffusion type for the entry team.

D. Students can be required to supply their own.

E. Two scenario course — One (1) supplied air manifold and two (2) SCBAs.

   Three scenario course — Two (2) supplied air manifolds and two (2) SCBAs.

F. 200 feet is the minimum. Additional airline of sufficient length for the entry team and back-up team may be required for additional scenarios.

G. None needed if SCBAs are used for the second or third scenario.

H. This can be a supplied air system, emergency escape breathing apparatus (EEBA) or an SCBA.

I. Enough Grade "D" Breathing Air must be available to run the required scenarios. This can be supplied by a compressor with back-up cylinders or by having enough air cylinders and/or a refill capability.

J. The hardline communication system should accommodate the attendant and entrants.

K. The tripod shall have a minimum breaking strength of 5,000 pounds to meet OSHA requirements. To better prepare the students for what they may encounter in the field, as many different high point anchors as possible should be available.

L. If the second scenario is a vertical entry, a second high point anchor is required. A ladder system, a second tripod or davit, or other anchor point will work. If the second scenario is a horizontal entry, nothing is required.

M. A rope retrieval system can be used for a second vertical entry.

N. More may be required as situations warrant.

O. Other lengths may be required by the scenarios. Low stretch kernmantle is also acceptable in place of static kernmantle.

P. Mask cleaning materials must comply with Cal-OSHA G-ISO Section 5144.

SITE ACCREDITATION PROCESS

CSRT Training Sites will be inspected for compliance with the CSRT Training Site Minimum Site Requirements and Equipment Standards. A CSRT Training Site representative submits to the Chief of State Fire Training a written request for accreditation as a Conditional or Permanent CSRT Training Site. This request shall include:

- A detailed description of the site that lists the facilities, structures, work areas, materials, props, tools, and equipment available and ready for delivering a CSRT course.
- A CSRT Site Evaluation Form completed by a registered CSRT Senior Instructor.

State Fire Training staff, authorized representative, and/or a registered CSRT Senior Instructor who is not affiliated with the site will conduct an inspection of the CSRT Training Site while operating under the direction of the Chief of State Fire Training.

Any discrepancies or deficiencies will be documented and discussed with the site representative at the time of the inspection. Once all discrepancies and deficiencies (if any) have been completed, validated, and verified by State Fire Training staff or authorized representative, the Chief of State Fire Training will notify the CSRT representative of their status as either an approved conditional or permanent site.

### RESCUE SYSTEMS 1 COURSE OUTLINE*

Course Objectives: To provide the student with...
- Techniques to operate safely when working around the structural collapse of light frame buildings
- Information on the potential hazards associated with rescue operations
- An opportunity to build on skills acquired in Low Angle Rope Rescue Operational training
- Information and techniques for lifting and moving heavy objects
- Information and techniques to break or breach building components to access a victim(s)
- Information and techniques to shore and stabilize building components

RESCUE SYSTEMS 1 COURSE SYLLABUS

Course Objectives: To provide the student with:
• Techniques to operate safely when working around the structural collapse of light frame buildings
• Information on the potential hazards associated with rescue operations
• An opportunity to build on skills acquired in Low Angle Rope Rescue Operational training
• Information and techniques for lifting and moving heavy objects
• Information and techniques to break or breach building components to access a victim(s)
• Information and techniques to shore and stabilize building components

Course Content

Topic 1-1: Introduction To the California Urban Search and Rescue System .............................................................. 1:00

Terminal Learning Objective (TLO): The student will be familiar with the requirements for the California Urban Search and Rescue (US&R) Basic and Light Operational Levels. The manipulative portion of the course concentrates on techniques to operate safely and effectively at structural collapse incidents involving the collapse or failure of light frame construction and basic rope rescue situations. The course uses the most innovative and progressive procedures being employed today, while maximizing rescue operation efficiency with minimal equipment and personnel. The Urban Search and Rescue Operational System Description includes: four different levels of operational capability, training, and equipment. Additional urban search and rescue multidisciplinary resources are also identified. The document uses the Incident Command System (ICS) to apply common terminology and resource management practices to provide supervision and control of essential functions at incidents that involve technically demanding rescue operations.

Enabling Learning Objectives (ELO):
1. Describe the history and objectives of the Rescue Systems 1 course.
2. Describe the California Urban Search and Rescue System.
3. Describe the relevant components of the ICS-US&R 120-1 Operational System.

4. Identify the five general construction categories.

**Topic 1-2: Rescue Operations**

Terminal Learning Objective (TLO): The student will be familiar with a structural collapse incident that presents the rescuer with a multitude of hazards and problems and uses the four phases of structural collapse rescue. Hazards can come from the structure itself, the surrounding area, and unsafe procedures used by the rescue team. Rescuer safety must be a priority stressed before, during, and after the incident by all personnel at the incident.

Enabling Learning Objectives (ELO):
1. Describe the four phases of structural collapse rescue.
2. Describe the checklist for the management of a structural collapse incident.
4. Describe the search marking system.

**Topic 1-3: US&R Safety and Medical Care for Victims**

Terminal Learning Objective (TLO): The student will be familiar with structural collapse incident organization and management. If an effective system to direct and control the large volume of personnel, equipment, and arriving resources is not in place, the person in charge will be overwhelmed. The order in which specific functions and tasks are performed is vital to the effectiveness of mitigating the search and rescue structural collapse incident. Planning is probably the single most important function for an effective response to structural collapse incidents. Proper planning will identify the legal authority and responsibility for specific actions, develop a vulnerability and hazard assessment, and identify resources, response coordination, training, and budgetary needs.

Enabling Learning Objectives (ELO):
1. Describe the general hazards of a structural collapse.
2. Describe four general types of building construction hazards.
3. Describe four types of collapse patterns.
4. Describe the necessary personal protective equipment to use during an incident.
5. Identify the safety and medical considerations to take during an incident.
6. Describe the injuries associated with a structural collapse.
7. Describe basic infectious disease precautions to take during an incident.

**Topic 1-4: US&R Planning and Preparation**

Terminal Learning Objective (TLO): The student will be familiar with structural collapse incident organization and management. If an effective system to direct and control the large volume of personnel, equipment, and arriving resources is not in place, the person in charge will be overwhelmed. The order in which specific functions and tasks are performed is vital to the effectiveness of mitigating the search and rescue structural collapse incident. Planning is probably the single most important function for an effective response to structural collapse incidents. Proper planning will identify the legal authority and responsibility for specific actions, develop a vulnerability and hazard assessment, and identify resources, response coordination, training, and budgetary needs.

Enabling Learning Objectives (ELO):
1. Describe the legal authority and responsibility for US&R.
2. Describe the development of a vulnerability and hazard assessment.
3. Identify resources for a US&R incident.
4. Describe effective response coordination.
5. Describe the training needed for local resources.
6. Describe budgetary needs during a US&R incident.
7. Describe the ICS, SEMS, and NIMS as they relate to a US&R incident.
8. Describe the communications necessary for a US&R incident.
9. Describe scene control.
10. Describe federal and state resources.

**Topic 2-1: Rescue Knots and Hitches**

Terminal Learning Objective: The student will be able to identify and properly tie all rescue knots and hitches.

Enabling Learning Objectives:
1. Demonstrate learned knowledge, skills, and abilities from prerequisite Low Angle Rope Rescue Operational (LARRO) course.
2. Demonstrate how to tie the six required knots.
3. Demonstrate how to tie the four Rescue Systems I required knots.

**Topic 2-2: Anchor Systems**

Terminal Learning Objective (TLO): The student will be aware of anchor selection and anchor system construction required for Rescue Systems I skills.

Enabling Learning Objectives (ELO):
1. Describe considerations when selecting anchors.
2. Describe the types of anchors.
3. Demonstrate how to form a single loop, double loop, locking girth hitch, Lark’s foot.
4. Demonstrate how to form a single and double loop basket sling (three bight).
5. Demonstrate how to form a single and multi-loop anchor sling.
6. Demonstrate how to form a wrap three pull two anchor sling.
7. Demonstrate sling anchor attachments: pretied.

**Topic 2-3: Rescuer and Ambulatory Victim Packaging**

Terminal Learning Objective (TLO): The student will be aware of how to properly package rescuers and victims to safely and effectively complete a rope rescue operation.

Enabling Learning Objectives (ELO):
1. Describe rescue harnesses and rescuer packaging.
2. Demonstrate how to don a Class III harness.
3. Demonstrate how to package a victim in a commercial victim harness.
4. Demonstrate how to package a victim in a hasty pelvic harness.

**Topic 2-4: System Attachments and Fall Restraint**

**Terminal Learning Objective (TLO):** The student will be aware of several methods of system attachments for rescuers and victims.

**Enabling Learning Objectives (ELO):**
1. Describe system attachments.
2. Demonstrate how to attach a rescuer to a rope rescue system.
3. Demonstrate how to attach an ambulatory victim to a rope rescue system.
4. Demonstrate how to attach a rescue litter vertically to a rope rescue system.
5. Demonstrate how to attach a rescue litter horizontally to a rope rescue system.
6. Demonstrate how to tend a rescue litter.
7. Demonstrate how to attach a rescuer to a fall restraint system.

**Topic 2-5: Belay/Safety Line Systems**

**Terminal Learning Objective (TLO):** The student will be aware of the importance of using a backup line to catch the load in the event of a failure of the main line.

**Enabling Learning Objectives (ELO):**
1. Define key points regarding the operation of a belay/safety line system.
2. Demonstrate belay/safety line configurations.
3. Demonstrate lowering operations—basic configuration.
4. Demonstrate retrieval operations—basic configuration.
5. Describe system variations.

**Topic 2-6: Rappelling / Descending**

**Terminal Learning Objective (TLO):** The student will be able construct and operate rope rescue descending systems.

**Enabling Learning Objectives (ELO):**
1. Describe descending techniques.
2. Demonstrate how to construct a fixed line for a rappelling.
3. Demonstrate how to reeve a figure eight descender and brake bar rack.
4. Demonstrate a rappel and lock-off using a figure eight descender and brake bar rack.
5. Demonstrate a rappel using a figure eight descender and brake bar rack with a high and low anchor point.

**Topic 2-7: Lower and Raise Main Line Systems**

**Terminal Learning Objective (TLO):** The student will be able to demonstrate how to raise and lower Main Line Systems.

**Enabling Learning Objectives (ELO):**
1. Describe rope rescue lowering and raising systems.
2. Demonstrate how to operate a lowering system.
3. Demonstrate how to convert a lowering system to a raising system with a 3:1 and 5:1 inline—RPM.
4. Demonstrate how to convert a lowering system to a raising system with a 3:1 or 5:1 inline with directional pulley.
5. Demonstrate how to construct a 3:1 and 5:1 mechanical advantage (MA) system.
6. Demonstrate how to construct a 3:1 and 5:1 pig rig.
7. Demonstrate how to convert a lowering system to a raising system with a 3:1 and 5:1 pig rig.

**Topic 3-1: Introduction to Lifting and Moving Heavy Objects**

**Terminal Learning Objective (TLO):** The student will be familiar with the unit objectives in order to develop the proper size up techniques and safety considerations when attempting to lift, roll, or move heavy objects. Heavy objects are unforgiving and cause severe, permanent injuries or death when performed incorrectly.

**Enabling Learning Objectives (ELO):**
1. Describe tool types, capabilities, and safety considerations when lifting heavy objects.
2. Describe three different types of jacks, their operating principles, and safety precautions.
3. Describe the appropriate personal protective equipment, safety, and medical precautions.
4. Describe rescue team positions.
5. Describe determining the weight of structural components.
6. Describe moving heavy objects.
7. Demonstrate raising, stabilizing, rotating, and lowering a single heavy object.
8. Demonstrate raising, stabilizing, moving, and lowering multiple heavy objects.
9. Demonstrate raising, stabilizing, moving, and lowering multiple heavy objects while safely managing and extricating a victim from under the object.

Topic 4-1: Introduction to Breaking and Breaching

Terminal Learning Objective (TLO): The student will be familiar with a structural collapse incident that requires breaking and breaching operations to gain access, remove debris, or release an entrapped victim. Breaking and breaching operations discussed in this course will focus on light-frame construction materials, such as wood and light-gauge metal, unreinforced masonry such as brick veneer, and reinforced masonry such as a cinder block wall.

Enabling Learning Objectives (ELO):
1. Describe tool types, capabilities, and safety considerations when breaking and breaching.
2. Describe light-frame structure design and construction materials.
3. Describe the appropriate personal protective equipment, safety medical precautions.
4. Describe breaking and breaching operations including shape and size of breaching openings.
5. Describe breaking and breaching operations in other general construction categories.

Topic 5-1: Ladder Rescue Systems

Terminal Learning Objective (TLO): The student will be familiar with the skills and techniques to move patients from a low place to a high place, a high place to a low place, or across uneven terrain. Rescuers will use fire service ladders and rope rescue equipment to build systems to accomplish this transport quickly and safely.

Enabling Learning Objectives (ELO):
1. Describe the components and operational functions of the seven ladder systems.
   - Moving-ladder slide
   - Ladder slide
   - Exterior leaning ladder
   - Interior leaning ladder
   - Cantilever ladder.
   - Ladder gin
   - Ladder "A" frame
2. Describe the components and operational functions of the mechanical advantage system used in a ladder rescue system.

Topic 6-1: Introduction to Structure Shoring Systems

Terminal Learning Objective (TLO): The student will be familiar with the skills and techniques to stabilize compromised light-frame structures and safely operate around them.

Enabling Learning Objectives (ELO):
1. Describe the techniques to mitigate structure collapse hazards.
2. Describe the steps involved during shoring size-up.
3. Describe different shoring size-up considerations.
4. Describe the proper placement of shoring components.
5. Describe the positions, roles, and responsibilities of the Shoring Team.
6. Describe the different types of shoring systems.

Topic 6-2: Introduction to Basic Tools and Equipment for Emergency Shoring Operations

Terminal Learning Objective (TLO): The student will be familiar with basic tools and equipment needed to construct emergency shores.

Enabling Learning Objectives (ELO):
1. Describe the tools and equipment for emergency shoring operations, including design, use, limitations, and applications.
2. Describe the safety considerations related to shoring tools and equipment.

Topic 6-3: Introduction to the Timber Spot Shore (Class 1)

Terminal Learning Objective (TLO): The student will be familiar with the skills and techniques required to construct timber spot shores.

Enabling Learning Objectives (ELO):
1. Describe the uses for timber spot shores.
2. Describe the components of timber spot shores.
3. Describe the assembly procedures for timber spot shores.
4. Describe the proper placement of shoring components.
5. Describe the evaluation and safety check process for timber spot shores.

**Topic 6.4: Introduction to the Two-post Vertical Shore (Class II)**

Terminal Learning Objective (TLO): The student will be familiar with the skills and techniques required to construct a two-post vertical shore.

Enabling Learning Objectives (ELO):
1. Describe the uses for a two-post vertical shore.
2. Describe the components of a two-post vertical shore.
3. Describe the assembly procedures for a two-post vertical shore.
4. Describe the proper placement of shoring components.
5. Describe the evaluation and safety check process for a two-post vertical shore.

**Topic 6.5: Introduction to the Horizontal Shore**

Terminal Learning Objective (TLO): The student will be familiar with the skills and techniques required to construct horizontal shores.

Enabling Learning Objectives (ELO):
1. Describe the uses for horizontal shores.
2. Describe the components of horizontal shores.
3. Describe the assembly procedures for horizontal shores.
4. Describe the proper placement of shoring components.
5. Describe the evaluation and safety check process for horizontal shores.

**Topic 6.6: Introduction to the Pre-constructed Window and Door Shore**

Terminal Learning Objective (TLO): The student will be familiar with the skills and techniques required to construct window and door shores.

Enabling Learning Objectives (ELO):
1. Describe the uses for window and door shores.
2. Describe the components of window and door shores.
3. Describe the assembly procedures for window and door shores.
4. Describe the proper placement of shoring components.
5. Describe the evaluation and safety check process for window and door shores.

**Topic 6.7: Introduction to the Sloped Surface Shore with Cribbing**

Terminal Learning Objective (TLO): The student will be familiar with the skills and techniques for using cribbing in combination with a shoring system.

Enabling Learning Objectives (ELO):
1. Describe the need for shoring a sloped surface with cribbing.
2. Describe the components of a sloped surface shore with cribbing.
3. Describe the assembly procedures for cribbing a sloped surface.
4. Describe the evaluation and safety check process.

**Topic 6.8: Introduction to the Split Sole Raker Shore System**

Terminal Learning Objective (TLO): The student will be able to construct a split shore.

Enabling Learning Objectives (ELO):
1. Describe the uses for the split sole raker shore.
2. Describe the components of a raker shore system.
3. Describe the assembly procedure for a raker shore system.
4. Describe the proper placement of shoring components.
5. Describe the evaluation and safety check process for a raker shore system.

**Topic 6.9: Introduction to the Cutting Station**

Terminal Learning Objective (TLO): The student will be able to construct and safely operate a cutting station.

Enabling Learning Objectives (ELO):
1. Describe the uses for the cutting station.
2. Describe the design and components of the cutting station.
3. Describe the different applications for the cutting station.
REScue Systems 1—Accredited Training Site Requirements

An accredited Rescue Systems 1 (RS1) Training Site has facilities, structures, work areas, materials, props, tools, and equipment of adequate size, type, and quantity to fully and safely support the cognitive and psychomotor training required to deliver the RS1 curriculum.

SITE CAPACITY

A RS1 Training Site is evaluated on its ability to deliver the required training to a maximum of 48 students. Each capacity-level represents the maximum number of modules that can be taught on the site at any given time. This maximum number will be determined based on the suitability of the site to safely train between 12 students in each of the individual modules. A site may be capable of delivering from one to four modules simultaneously.

Four Modules
- Rope Rescue
- Heavy Objects/Breaking and Breaching
- Ladder Rescue Systems
- Emergency Building Shores

One-module Site
- Supports the instruction for teaching the maximum of one (1) module at a time for twelve (12) students
- One (1) RS1 Primary Instructor is required for a student instructor ratio of 12:1.

Two-module Site
- Supports the instruction for teaching the maximum of two (2) modules for twenty-four (24) students
- One (2) RS1 Primary Instructors are required for a student instructor ratio of 12:1.

Three-module Site
- Supports the instruction for teaching the maximum of three (3) modules for thirty-six (36) students
- Three (3) RS1 Primary Instructors are required for a student instructor ratio of 12:1.
- One (1) RS1 Senior Instructor is required.

Four-module Site
- Supports the instruction for teaching the maximum of four (4) modules for forty-eight (48) students
- Four (4) RS1 Primary Instructors are required for a student instructor ratio of 12:1.
- One (1) RS1 Senior Instructor is required.

MINIMUM SITE REQUIREMENTS

The accredited RS1 Rescue Training Site assumes all responsibility, liability, and maintenance for the engineering design, strength, stability, and adequacy of all props, including anchor points and tie offs. The requesting agency further assumes all responsibility, liability, and maintenance for all tools, equipment, and supplies used at the site for the delivery of a RS1 class. This includes, but is not limited to, ladders, ropes, rescue hardware, shoring, and cribbing materials. The facilities and props for each module should be in close proximity to each other to facilitate timeframes.

Facilities
- Classroom of adequate size and capability (including audiovisual equipment) to support cognitive training
- Wash areas
- Bathrooms
- Rehabilitation area
- Safe and adequate parking

Rope Rescue Module
- Structure, 30' minimum height with working roof that is of sound and safe engineering design
- High and low anchor points to perform rope evolutions
- Area to demonstrate and practice skills learned in Low Angle Rope Rescue (rescue knots, rescue/victim packaging, and rope systems)
- Area to demonstrate and practice anchor systems

Heavy Objects/Breaking and Breaching Module

Heavy Objects
- Three (3) 20'x20' concrete or asphalt pad with a 10' diameter buffer area at grade level (may be contiguous)
- Four (4) 3'x3'x3' concrete cubes
- Four (4) 5'x6'x12' concrete reinforced slabs (6,000 pounds each)
**Breaking and Breaching**
- Working area at grade level, 20' long x 20' wide
  - Concrete, asphalt, or unimproved ground
  - Length of work area is dependent on the length of the pipe-shaped props
- Five (5) pipe-shaped props placed end to end allowing for breaching props to be placed between them
  - Concrete, metal, or wood
  - 36"-48" diameter x 6'-10' long

---

**Diagram:**

```
½ SQUAD ENTER   PIPE   PIPE   X   PIPE   X   PIPE   PIPE   ½ SQUAD ENTER
              |
```

**EXTERIOR BREACH PROPS**

**INTERIOR BREACH PROPS**

X—denotes victim location

---

**Two (2) exterior wall-breaching props**
- One side with 4'x4'x½" Wonder board over 4'x4' stucco lathcing over 4'x4'x½" plywood nailed with 8d nails 6" on center to a 2"x4" frame with wood studs 16" on center nailed with 16d nails
  - The other side sheeted with 4'x4'x½" drywall
- Each prop shall include a span of electrical wire / conduit to simulate an obstacle

**Two (2) interior wall-breaching props**
- One (1) with 4'x4'x½" drywall fastened with 1 ½" drywall screws 6" on center to a 2"x4" frame with metal studs 16" on center
  - The other side sheeted with another 4'x4'x½" drywall
- Prop shall include a span of electrical wire / conduit to simulate an obstacle
- One (1) with 4'x4'x½" drywall fastened with 1 ½" drywall screws 6" on center to a 2"x4" frame with 2"x4" wood studs 16" on center nailed with 16d nails
  - The other side sheeted with another 4'x4'x½" drywall
- Prop shall include a span of electrical wire / conduit to simulate an obstacle.

**Ladder Rescue Systems Module**
- 20' structure adequate for simultaneous operations of ladder systems that is of sound and safe engineering design
- Side openings to accommodate simultaneous operations of ladder systems
- High and low anchor points appropriately placed for use with each operation
- Open field area to accommodate simultaneous operations, ladder "A" frame, ladder gin, and pickets
- Area to lower a student one story through an opening using an interior leaning ladder
  - An 8’ minimum height is required

**Emergency Building Shores Module**
- Structure(s) adequate for simultaneous operations of interior and exterior shoring systems that is of sound and safe engineering design
  - Area large enough to accommodate lumber supply (near cutting station)

**Interior Shores**
- Working area: 16’x16’ minimum with 8’ ceiling
- Timber spot shores
  - Area with simulated or actual joist(s) to set two (2) timber spot shores
- Two post vertical shore
  - Area with simulated or actual joist(s) to set one (1) two (2) post vertical shore
- Two post horizontal shore
  - An opening 3’ to 8’ wide and 8’ minimum in height
- Window and door shores
  - Window opening: 2’x2’ minimum to 4’x4’ maximum
  - Door opening: 2’6”x6’8” minimum to 4’7” maximum
Sloped Surface Shore (Cribbing)

- 8' x 8' working area minimum
- Configured so that the crib bed of a sloped floor shore is no greater than 3' in height when constructed
- 3' elevation within a 10' distance maximum slope (30 percent / 15 degree slope).

Raker Shores
- One (1) wall/area 14' high x 12' wide
- Working area: 16' away from building and 12' wide.

Cutting Station
- Minimum of 6' off the ground
- 16' x 16' working area

EQUIPMENT STANDARDS

Student safety is of paramount importance when conducting the type of high-risk training associated with the RS1 course. The equipment listed below is the minimum for each accredited RS1 Training Site. The equipment is in compliance with or exceeds the standards listed in NFPA 1983, Standard on Fire Service Life Safety Rope, Harness, and Hardware. Student safety is of paramount importance when conducting the type of high-risk training associated with the RS1 course. All PPE shall be the responsibility of the student and shall meet agency and site requirements. Lumber list does not include lumber required to construct props.

SITE DEVIATION

In the event that a training site has a facility, structure, or prop that does not comply with the RS1 minimum site requirements and equipment standards, the site has the opportunity to apply for a site deviation. A RS1 Senior Instructor or designee submits to the Chief of State Fire Training a formal letter requesting site deviation. This letter must describe the site deviation in detail by listing:

- The need and parameters of the deviation.
- New or revised lesson plans linked to the deviation that ensures consistency with the standards and behavioral objectives of the approved RS1 curriculum.
- Demonstration, either live or through visual aids, of any deviated technique or procedure.
The Chief of State Fire Training will review the request for site deviation. Any deficiencies will be appropriately documented and discussed with the RS1 Senior Instructor or designee requesting the site deviation. If site deviation is denied, a provisional accreditation may be granted at this time. If a site is not approved, they have three (3) months to comply with the site requirements identified as deficient in the inspection report.

SITE ACCREDITATION PROCESS

Rescue Systems 1 Training Sites will be inspected for compliance with the RS1 minimum site requirements and equipment standards. Sites may be accredited as one of the following:

• Full Accreditation
  • A permanent-use site that fully meets the RS1 minimum site requirements and equipment standards.
  • Temporary Accreditation
  • A short-term use site that meets the RS1 minimum site requirements and equipment standards.
  • Typically, these sites are in areas where permanent sites are not practical or available.
  • Accreditation is granted for the purpose of delivering a set number of courses.
  • Once the training is complete, the temporary accreditation is rescinded.

Full Accreditation
A RS1 Training Site representative submits to the Chief of State Fire Training a formal letter requesting full accreditation for a permanent site. This letter must describe the site in detail by listing the facilities, structures, work areas, materials, props, tools, and equipment available and ready for delivering a RS1 course. State Fire Training staff and/or a registered RS1 Senior Instructor, operating under the direction of the Chief of State Fire Training, will conduct an inspection of the RS1 Training Site. Any discrepancies or deficiencies will be appropriately documented and discussed with the site representative at the time of the inspection. Copies of all inspection documents and notes will be kept on file. The Chief of State Fire Training will notify the RS1 Training Site of their status after the inspection.

Temporary Accreditation
A registered RS1 Senior Instructor or designee submits to the Chief of State Fire Training a formal letter requesting temporary accreditation for delivering a RS1 course. This letter must describe the site in detail by listing the facilities, structures, work areas, materials, props, tools, and equipment available and ready for delivering a RS1 course. Photographs of each required structure, work area, and prop must be included in the application package. A completed “Request for Rescue Systems Course Scheduling” providing the dates of the upcoming course and all instructors must be included in the application package. Temporary accreditation must be requested at least ninety (90) days before the beginning date of the course.

Appeals
Step 1
The RS1 Training Site representative must submit in writing to the Chief of State Fire Training all evidence to support reversing SFT’s denial of site accreditation. After review of all submitted materials, the Chief of State Fire Training will notify the site representative in writing of the decision to uphold, modify, or withdraw the denial of accreditation.

Step 2
If the denial of accreditation is upheld, the site representative may appeal the findings to the Assistant State Fire Marshal. The RS1 Training Site representative must submit in writing all evidence to support reversing the decision of the Chief of Education and Training. After review of all submitted materials, the Assistant State Fire Marshal will notify the site representative in writing of the decision to uphold, modify, or withdraw the denial of accreditation. The decision of the Assistant State Fire Marshal is final.
**Course Information and Required Materials**

**January 2019**

**Course:** Rescue Systems 2: Advanced Rescue Skills (2010)

**Hours:** 40

**Designed For:** All fire service and allied emergency response personnel

**Description:** Provides advanced heavy rescue system techniques. Key topics include: Structural building types, wood and mechanical shores, crib capacities, floor weight calculations, building search, confined space considerations, damaged structure hazard assessment, use of power tools, air bags, and USAR ICS.

**Prerequisites:** Rescue Systems 1, Basic ICS

**Certification:** None

**Max. Class Size:**
- 48 student maximum: Four-module site with 4 Primary Instructors and 1 Senior Instructor
- 36 student maximum: Three-module site with 3 Primary Instructors and 1 Senior Instructor
- 24 student maximum: Two-module site with 2 Primary Instructors
- 12 student maximum: One-module site with 1 Primary Instructor

**Restrictions:** This course can only be delivered at a State Fire Training approved site.

### REQUIRED STUDENT MATERIALS

- **Student Manual**
  - 2009
  - 2010
  - SFT

- **Student Task Book**

**RESCUE SYSTEMS 2 COURSE OUTLINE***

Course Objectives: To provide the student with...

- Information to incorporate safety practices in all phases of the planning and implementation of a rescue operation
- Information to identify and mitigate potential hazards associated with rescue operations
- An opportunity to build on skills acquired in Rescue Systems 1 training
- Reconnaissance strategies and techniques for locating victims in a collapsed building
- Information on structural triage and collapse patterns of building structures
- Information and techniques to shore and stabilize building components
- Information and techniques to break or breach building components to access a victim(s)
- Techniques of metal burning systems
- Information and techniques for lifting and moving heavy objects

TECHNICAL RESCUE COURSES
COURSE INFORMATION AND REQUIRED MATERIALS
January 2019 May 2015

Topic 4-3 Metal Burning: .............................................................................................................. 4:00
Topic 5-1 Lifting and Moving: ........................................................................................................... 8:00
Course Hours: ................................................................................................................................. 40:00

*This is an abbreviated Course Plan. Terminal & Enabling Obj. & Site Requirements can be found on the full
version located on the SFT Curriculum page of the SFT website at:
http://osfm.fire.ca.gov/training/SFTCurriculum.php

Hours: 40
Designed For: All fire service and allied emergency response personnel
Description: Provides advanced heavy rescue system techniques. Key topics include: Structural building
types, wood and mechanical shores, crib capacities, floor weight calculations, building search,
confined space considerations, damaged structure hazard assessment, use of power tools, air
bags, and USARICS.
Prerequisites: I-200, Rescue Systems 1
Certification: Under development
Class Size: Student/instructor ratio: 1:2
48 student maximum: Four-module site with 4 Primary Instructors and 1 Senior Instructor
36 student maximum: Three-module site with 3 Primary Instructors and 1 Senior Instructor
24 student maximum: Two-module site with 2 Primary Instructors
12 student maximum: One-module site with 1 Primary Instructor
Restrictions: This course can only be delivered at an accredited SFT Rescue Training site.

RESCUE SYSTEMS 2 COURSE SYLLABUS

Course Objectives: To provide the student with:
• Information to incorporate safety practices in all phases of the planning and implementation of a rescue operation
• Information to identify and mitigate potential hazards associated with rescue operations
• An opportunity to build on skills acquired in Rescue Systems 1 training
• Reconnaissance strategies and techniques for locating victims in a collapsed building
• Information on structural triage and collapse patterns of building structures
• Information and techniques to shore and stabilize building components
• Information and techniques to break or breach building components to access a victim(s)
• Techniques of metal burning systems
• Information and techniques for lifting and moving heavy objects

Course Hours .......................................................... 40:00
Topic 1-1 Introduction and Introduction .......................................................... 1:00
Terminal Learning Objective (TLO): The student will be familiar with course administration and operational
requirements for successful completion.
Enabling Learning Objectives (ELO):
1. Describe starting times and attendance requirements for successful completion of the course.
2. Describe the necessary paperwork to complete all administrative processes required for successful completion.
3. Describe the criteria for successful completion of the course.
4. Describe the student manual and its contents.

Topic 1-2 Safety ...................................................... 1:00
Terminal Learning Objective (TLO): The student will be familiar with the importance of including sound safety
practices in all phases of the planning and rescue operations.
Enabling Learning Objectives (ELO):
1. Describe the importance of safety during all phases of a mission.
2. Describe the importance of recognizing and mitigating safety hazards.
3. Describe the importance of incorporating safety into rescue planning and briefing.
4. Describe and employ the concept of "LCES" (Lookouts, Communications, Escape routes, and Safe zones).
5. Perform a risk hazard analysis for a specific event and suggest actions to minimize risks and/or eliminate hazards.
6. Describe the issues related to personal and team security zones, as a planning tool.
7. Describe the importance of safety risk and hazard identification.

**Topic 1-3 Survival**

Terminal Learning Objective (TLO): The student will be familiar with the basic survival strategies during a large disaster if they should be isolated or separated from their support system.

Enabling Learning Objectives (ELO):
1. Describe the psychological importance of keeping a positive attitude.
2. Identify suitable and safe shelter.
3. Describe the importance of protective clothing and outerwear in disaster areas during inclement weather.
4. Identify potable water sources and how to construct a fire.
5. Describe when travel is necessary, how to orientate yourself to the environment, and how to build a signaling system.

**Topic 1-4 Search Capabilities**

Terminal Learning Objective (TLO): The student will be familiar with the reconnaissance strategies that should be employed to produce the best results for finding the most victims.

Enabling Learning Objectives (ELO):
1. Establish search priorities and apply search strategies.
2. Identify reconnaissance team assignments and positions.
3. Describe the importance of incorporating safety into rescue planning and briefing.
4. Apply a range of search tools from simple voice call-outs to the use of more sophisticated electronic equipment and canines.

**Topic 1-5 Structure Triage**

Terminal Learning Objective (TLO): The student will be familiar with the most appropriate strategies to be used to effect rescues in various types of structures by learning how to triage structures and identify trapped victim(s).

Enabling Learning Objectives (ELO):
1. Identify the phases of a disaster
2. Apply tools used in structural triage and perform structural/hazard assessment.
3. Describe the variety of task assignments for the reconnaissance team.
4. Apply appropriate structural hazard markings to buildings.
5. Apply search and rescue assessment markings.
6. Perform a basic building search and rescue plan.

**Topic 2-1: Collapse Patterns Structural Engineering**

Terminal Learning Objective (TLO): The student will be familiar with how building structures can be separated into specific types that exhibit unique collapse patterns when subjected to extreme forces due to earthquake, wind, and explosions.

Enabling Learning Objectives (ELO):
1. Describe how earthquakes, wind, and explosions produce unique effects on different types of structures.
2. Describe how each of these produce unique and recognizable collapse patterns.
3. Describe how this knowledge will allow us to recognize the difference between survivable and less survivable voids.

**Topic 2-2: Structural Hazard Identification**

Terminal Learning Objective (TLO): The student will be familiar with the most common signs of distress exhibited by damaged structures, as well as understand to the most common hazards found in damaged structures, and methods that have been used to used to mitigate them.

Enabling Learning Objectives (ELO):
1. Identify how concrete and masonry crack
2. Describe how these cracks can be "read" to predict future performance of these structures.
3. Identify the most common hazardous conditions that will occur in the four building types.

**Topic 3-1: Basic Shoring**

Terminal Learning Objective (TLO): The student will be familiar with the function and capacity limitations of the shoring used in US&R to support damaged structures and why and how shores are constructed.

Enabling Learning Objectives (ELO):
1. Determine weights to be supported.
2. Determine the appropriate shore to be constructed.
3. Describe the sequence of construction to minimize risk.
4. Demonstrate how to inspect constructed shores.

Topic 3-2: Shoring Construction

Terminal Learning Objective (TLO): The student will be familiar with how to maintain the integrity of all structurally unstable elements and how to properly transmit or redirect the collapse loads to stable ground.
Enabling Learning Objectives (ELO):
1. Demonstrate a proper shoring size-up.
2. Identify locations for proper shoring placement.
3. Describe shoring team concepts and identify positions and purpose.
4. Describe the different types of shoring components and equipment.

Topic 4-1: Breaking and Breaching

Terminal Learning Objective (TLO): The student will be able to properly breach, break, cut, and burn to gain access through concrete, steel, or other structural components during rescue operations in heavy floor, heavy wall, steel, and concrete structures.
Enabling Learning Objectives (ELO):
1. Identify types of concrete and their components.
2. Identify concrete components and their importance to systems design.
3. Describe the importance during collapse rescue operations.
4. Identify concrete construction types.
5. Describe the properties, strengths, and weaknesses of concrete and its components.
6. Select tools or tool packages for rescue operations.
7. Identify functional parts of an exothermic torch.
8. Identify functional parts of an oxy-acetylene torch.
9. Troubleshoot each tool as needed.

Topic 4-2: Tool Applications and Assessment

Terminal Learning Objective (TLO): The student will be able to inspect, operate, maintain, and safely use the power tools used in Rescue Systems 2.
Enabling Learning Objectives (ELO):
1. Describe the operator’s influence on tool performance.
2. Describe electrical power sources, electrical loads, and tool safety.
3. Describe the tool assessment criteria.
4. Demonstrate a pre-use inspection of all gas, fuel, pneumatic, hydraulic, and electric power tool systems.

Topic 4-3: Metal Burning

Terminal Learning Objective (TLO): The student will be familiar with the technology, capabilities, and characteristics of each different metal burning system, the different types of metals and their characteristics, which metal burning system is best suited for a particular job or assignment.
Enabling Learning Objectives (ELO):
1. Describe the functions that need to be performed by the burning team.
2. Describe the advantages and disadvantages of the various types of metal burning equipment.
3. Describe the different and most expedient methods to be used with each cutting or burning system to safely accomplish the assigned task.

Topic 5-1: Lifting and Moving

Terminal Learning Objective (TLO): The student will be able to size-up objects that have entrapped people and efficiently apply a variety of machines and power to safely move these objects.
Enabling Learning Objectives (ELO):
1. Describe basic physics as it relates to weight, gravity, center of gravity, and friction and resistance force.
2. Demonstrate the use of a mechanical advantage to move heavy objects.
3. Demonstrate the effective use of air bags.
4. Demonstrate proper load stabilization techniques.
5. Demonstrate the use of a wedge anchor and eye nut.
6. Calculate the weights of common materials.
7. Use proper safety protocols.
RESCUE SYSTEMS 2-ACCREDITED TRAINING SITE REQUIREMENTS

An accredited Rescue Systems 2 (RS 2) Training Site has facilities, structures, work areas, materials, props, tools, and equipment of adequate size, type, and quantity to fully and safely support the cognitive and psychomotor training required to deliver the RS2 curriculum.

SITE CAPACITY

A RS2 Training Site is evaluated on its ability to deliver the required training to a maximum of 48 students. Each capacity level represents the maximum number of modules that can be taught on the site at any given time. This maximum number will be determined based on the suitability of the site to safely train between 12 students in each of the individual modules. A site may be capable of delivering from one to four modules simultaneously.

Four Modules
- Interior Shores Module
- Exterior Shores Module
- Breaking and Breaching Module
- Lifting and Moving Module

One-module Site
- Supports the instruction for teaching the maximum of one (1) module at a time for twelve (12) students
- One (1) RS 2 Primary Instructor is required for a student instructor ratio of 12:1

Two-module Site
- Supports the instruction for teaching the maximum of two (2) modules for twenty-four (24) students
- One (1) RS 2 Primary Instructors are required for a student instructor ratio of 12:1

Three-module site
- Supports the instruction for teaching the maximum of three (3) modules for thirty-six (36) students
- Three (3) RS 2 Primary Instructors are required for a student instructor ratio of 12:1
- One (1) RS 2 Senior Instructor is required

Four-module site
- Supports the instruction for teaching the maximum of four (4) modules for forty-eight (48) students
- Four (4) RS 2 Primary Instructors are required for a student instructor ratio of 12:1
- One (1) RS 2 Senior Instructor is required

MINIMUM SITE REQUIREMENTS

The accredited RS2 Rescue Training Site assumes all responsibility, liability, and maintenance for the engineering design, strength, stability, and adequacy of all props, including anchor points and tie offs. The requesting agency further assumes all responsibility, liability, and maintenance for all tools, equipment, and supplies used at the site for the delivery of a RS2 class. This includes, but is not limited to, ladders, ropes, rescue hardware, shoring and cribbing materials. The facilities and props for each module should be in close proximity to each other to facilitate timeframes.

Facilities
- Classroom of adequate size and capability (including audiovisual equipment) to support cognitive training
- Wash areas
- Bathrooms
- Rehabilitation area
- Safe and adequate parking

Interior and Exterior Shores Module
- Structure(s) adequate for simultaneous operations of interior and exterior shoring systems that is of sound and safe engineering design
- Area large enough to accommodate lumber supply (near cutting station)
- Interior shore
  - Working area: 20’x20’ minimum with 8’ ceiling
  - Double T-spot shore
    - Area with simulated or actual joist(s) to construct one (1) Double T-spot shore
  - Vertical shore
    - Area with simulated or actual joist(s) to set one (1) vertical shore with three (3) posts
- Laced post shore
  - Area with simulated or actual joist(s) to construct one (1) laced post shore
- Window, door, and horizontal shore
  - Two window openings: 2' to 4' wide
  - At least one opening to be racked 10 to 15 degrees from plumb
- Two door openings: 30" to 48" wide
  - At least one opening to be racked 10 to 15 degrees from plumb
- Sloped surface shore
  - 20'x20' working area with a 12' wide 12' long sloped surface
  - Configured so that the sloped surface is no shorter than 3' in height at the low end
  - Slope angle to be at least 6° in 10' (3 deg., 5%) to a max of 120° in 10' (45 deg., 100%)
- Raker shore
  - One 16' high minimum 16' long wall
  - One 16' high 16' long wall raked 5 to 15 degrees from plumb
  - 20'x20' working area
- Cutting station and table
  - 20'x20' working area
  - Cutting table construction as per student/instructor manual

### Breaking and Breaching Module
- Working area at grade level, 20' long, 20' wide
  - Concrete, asphalt, or unimproved ground
  - Length of work area is dependent on the length of the pipe-shaped props
- Four (4) concrete pipes or concrete vaults
  - 48" diameter
  - 8' long
- Twelve (12) re-enforced concrete slabs
  - 4'x4'x6" minimum with a maximum thickness of 8"
  - #3 rebar placed 12" on center
  - 5 sack mix
  - 2,500 psi
- Twelve (12) re-enforced concrete slabs
  - 4'x4'x3" minimum with a maximum thickness of 6"
  - #3 rebar placed 12" on center
  - 5 sack mix
  - 2,500 psi
- Two (2) steel plates
  - 1/4"x4'x8'
  - Can be scrap material
- Two (2) steel I-beams
  - Various lengths
  - Can be scrap material
- Ten (10) feet wire rope
  - 1/4" diameter
- Two (2) steel siding / decking
  - 10'x2'x20 gauge
- Twelve (12) wood dunnage
  - 4"x4"x8'

### Lifting and Moving Module
- Three (3) 20'x20' concrete pads with a 10'-diameter buffer area at grade level (may be contiguous)
  - Concrete or asphalt
- Two (2) 5'x8'x12'- concrete reinforced slabs (6,000 pounds each)
- One (1) 4'x8' minimum, solid concrete reinforced cylinder (15,000 lbs.)
  - This can be accomplished by filling the 4'x8' aqua conduit with concrete
- One (1) 5'x10'x5'-1/4" concrete reinforced slab
- Any combination of props to meet the KSAs of the final practical exercise
EQUIPMENT STANDARDS

Student safety is of paramount importance when conducting the type of high-risk training associated with the RS2 course. The equipment listed below is the minimum for each accredited RS2 Training Site. The equipment is in compliance with or exceeds the standards listed in NFPA 1983, Standard on Fire Service Life Safety Rope, Harness, and Hardware. Student safety is of paramount importance when conducting the type of high-risk training associated with the RS2 course. All PPE shall be the responsibility of the student and shall meet agency and site requirements. Lumber list does not include lumber required to construct props.

**SITE DEVIATION**

In the event that a training site has a facility, structure, or prop that does not comply with the RS2 minimum site requirements and equipment standards, the site has the opportunity to apply for a site deviation. A RS2 Senior Instructor or designee submits to the Chief of State Fire Training a formal letter requesting site deviation. This letter must describe the site deviation in detail by listing:

- The need and parameters of the deviation.
- New or revised lesson plans linked to the deviation that ensures consistency with the standards and behavioral objectives of the approved RS2 curriculum.
- Demonstration, either live or through visual aids, of any deviated technique or procedure.

The Chief of State Fire Training will review the request for site deviation. Any deficiencies will be appropriately documented and discussed with the RS2 Senior Instructor or designee requesting the site deviation. If site deviation is denied, a provisional accreditation may be granted at this time. If a site is not approved, they have three (3) months to comply with the site requirements identified as deficient in the inspection report.

**SITE-ACREDITATION PROCESS**

Rescue Systems 2 Training Sites will be inspected for compliance with the RS2 minimum site requirements and equipment standards. Sites may be accredited as one of the following:

- **Full Accreditation**
  - A permanent-use site that fully meets the RS2 minimum site requirements and equipment standards.
- **Temporary Accreditation**
  - A short-term use site that meets the RS2 minimum site requirements and equipment standards.
  - Typically, these sites are in areas where permanent sites are not practical or available.
  - Accreditation is granted for the purpose of delivering a set number of courses.
  - Once the training is complete, the temporary accreditation is rescinded.

**Full Accreditation**

A RS2 Training Site representative submits to the Chief of State Fire Training a formal letter requesting full accreditation for a permanent site. This letter must describe the site in detail by listing the facilities, structures, work areas, materials, props, tools, and equipment available and ready for delivering a RS2 course. State Fire Training staff and/or a registered RS2 Senior Instructor, operating under the direction of the Chief of State Fire Training, will conduct an inspection of the RS2 Training Site. Any discrepancies or deficiencies will be appropriately documented and discussed with the site representative at the time of the inspection. Copies of all inspection documents and notes will be kept on file. The Chief of State Fire Training will notify the RS2 Training Site of their status after the inspection.

**Temporary Accreditation**

A registered RS2 Senior Instructor or designee submits to the Chief of State Fire Training a formal letter requesting temporary accreditation for delivering a RS2 course. This letter must describe the site in detail by listing the facilities, structures, work areas, materials, props, tools, and equipment available and ready for delivering a RS2 course. Photographs of each required structure, work area, and prop must be included in the application package. A completed “Request for Rescue Systems Course Scheduling” providing the dates of the upcoming course and all instructors must be included in the application package. Temporary accreditation must be requested at least ninety (90) days before the beginning date of the course.
Apologies
Step 1
The RS 2 Training Site representative must submit in writing to the Chief of State Fire Training all evidence to support reversing SET’s denial of site accreditation. After review of all submitted materials, the Chief of State Fire Training will notify the site representative in writing of the decision to uphold, modify, or withdraw the denial of accreditation.

Step 2
If the denial of accreditation is upheld, the site representative may appeal the findings to the Assistant State Fire Marshal. The RS2 Training Site representative must submit in writing all evidence to support reversing the decision of the Chief of Education and Training. After review of all submitted materials, the Assistant State Fire Marshal will notify the site representative in writing of the decision to uphold, modify, or withdraw the denial of accreditation. The decision of the Assistant State Fire Marshal is final.
Course Information and Required Materials

Course: Rescue System 3: Structural Collapse Technician (2012)
Hours: 24 (Six, 4 hour modules)

Design For: All fire service and allied emergency response personnel
Description: Bridges the training gap between the California State Fire Training Rescue Systems 2 Advanced Rescue Skills course and the Federal Emergency Management Agency Structural Collapse Technician course. Key topics include: powder actuated tools, pneumatic shores, additional tools and techniques for breaking and breaching, cutting a tensioned cable, the "O" course, rigging, and crane operations.

Prerequisites: Rescue Systems 2
Confined Space Rescue Technician
Trench Rescue Technician
Hazardous Materials (Operations Level)

Certification: None
Class Size: 48
Student to Instructor Ratio: 12:1 and 1 Senior Instructor for 1-4 module delivery
(Note: Senior cannot be a Primary in 3 or 4 module classes)
Restrictions: Delivered only at an approved RS-2 training site.

**REQUIRED STUDENT MATERIALS**

- Rescue Systems 3 Student/Instructor Manual
- Rescue Systems 3 Student Task Book

**REQUIRED INSTRUCTOR MATERIALS**

- Rescue Systems 3 PowerPoint

Total Hours .................................................................................................................. 24:00

*This is an abbreviated Course Plan. Terminal & Enabling Obj. & Site Requirements can be found on the full version located on the SFT Curriculum page of the SFT website at: [http://osfm.fire.ca.gov/training/SFTCurriculum.php](http://osfm.fire.ca.gov/training/SFTCurriculum.php)*
MODULE I

Topic 1: Introduction and Administration / Safety

Terminal Objective: The student will receive all information regarding administration and operational requirements for completion of this course, along with an understanding of the importance of sound safety practices in all phases of planning and rescue operations.

Enabling Objectives:
1. Receive an overview of the student manual.
2. Receive squad assignments and a schedule of events and rotation times, course agenda, and information regarding the location of specific events.
3. Receive information and the necessary paperwork for reporting injuries.
4. Understand the importance of recognizing and mitigating safety hazards.
5. Be able to perform a risk / hazard analysis for a specific incident and suggest actions to minimize risks and/or eliminate hazards.
6. Understand the importance of safety risk and hazard identification.

Topic 2: Power Actuated Tools

Terminal Objective: The student will understand the function, capacity and how to safely operate power actuated tools used in Urban Search and Rescue to support damaged structures.

Enabling Objectives:
1. Understand the purpose and use of powder actuated tools.
2. Understand how to perform the center punch test.
3. Understand proper safety techniques.
4. Demonstrate the proper operation of powder actuated tools.
5. Receive certification in the use of specific powder actuated tools (optional).
6. Demonstrate proper safety techniques.

Topic 3: Rigging

Terminal Objective: The student will understand the function and capacity of rigging used to lift and move and move heavy objects.

Enabling Objectives:
13. Identify different types of rigging equipment.
14. Understand the purpose and use of rigging equipment.
15. Understand effects of critical angles on rigging equipment.
16. Demonstrate the inspection of rigging equipment.

MODULE II

Topic 1: Shoring

Terminal Objective: The student will understand the function and capacity of shoring systems used in Urban Search and Rescue to support damaged structures.

Enabling Objectives:
1. Identify the components of pneumatic shores.
2. Understand the purpose and use of pneumatic shores.
3. Understand the limitations of pneumatic shores.
4. Understand how to construct a spot shore.
5. Understand how to construct a window shore.
6. Construct a vertical shore.
7. Understand how to construct a door shore.
8. Construct a horizontal shore.
9. Construct a raker shore.
10. Understand how to construct a sloped floor shore.
11. Demonstrate proper safety techniques.
MODULE III
Topic 1: Breaking / Breaching

Terminal Objective: The student will properly break and breach to gain access through concrete, steel, or other structural components during rescue operations in heavy floor, heavy wall, steel and concrete structures.

Enabling Objectives:
1. Use rotary hammer to breach a 2" minimum inspection hole.
2. Breach concrete while suspended by a rope system.
4. Identify safety concerns when breaching concrete.
5. Set up and operate the Stanley hydraulic power unit.
6. Use the hydraulic chainsaw.
7. Demonstrate a bevel cut for a "lift-out".
8. Use the hydraulic circular saw.
9. Use the hydraulic breakers.
10. Drill 2" core hole in concrete.
11. Use gas and electric concrete coring tools.
12. Demonstrate proper safety techniques.

MODULE IV
Topic 1: Cutting / Burning

Terminal Objective: The student will understand the capabilities and limitations of all types of burning equipment that can be used in USAR operations.

Enabling Objectives:
1. Use the oxy/acyetylene cutting torch.
2. Use the oxy/gasoline cutting torch.
3. Use the exothermic cutting torch.
4. Demonstrate the proper technique for a piercing / plunge cut with each cutting torch.
5. Demonstrate the proper technique for a line cut with each cutting torch.
6. Demonstrate the proper technique for cutting a tensioned cable or wire rope.
7. Cut a hole in steel for a sling attachment (optional).
8. Demonstrate proper safety techniques.

MODULE V
Topic 1: Lifting / Moving ("O" Course)

Terminal Objective: Size up objects that have entrapped people and efficiently apply a variety of machines and power to safely move these objects.

Enabling Objectives:
1. Use levers to lift, move, and lower a heavy object.
2. Use pipes as rollers to move a heavy object.
3. Use wood timbers as rails.
4. Use an inclined plane.
5. Use crib beds to lift and stabilize a heavy object.
6. Construct a mechanical advantage system with rope and pulleys.
8. Use proper staffing and commands.
9. Demonstrate proper safety techniques.

MODULE VI
Topic 1: Lifting / Moving (Crane Operations)
Terminal Objective: Size-up objects that have entrapped people and efficiently apply a variety of machines and power to safely move these objects.

Enabling Objectives:
1. Accurately calculate load weights.
2. Find the center of gravity of different size loads and irregular shaped objects.
3. Use different methods to rig wire rope slings on a load.
4. Use different methods to rig synthetic slings on a load.
5. Properly use shackles in rigging a load.
6. Rig loads of different sizes and shapes.
7. Become familiar with different types of cranes.
8. Understand how to set up a crane.
9. Demonstrate proper crane hand signals.
10. Demonstrate proper safety techniques.

SITE REQUIREMENTS

■ The following are minimum requirements for a Rescue Systems 3 / Structure Collapse Technician-Bridge Training Site:
  ■ The facilities and props for each module should be in close proximity to each other to facilitate time frames.
  ■ The requesting agency assumes all responsibility, liability, and maintenance for the engineering design, strength, stability, and adequacy of all props.
  ■ The requesting agency further assumes all responsibility, liability, and maintenance for all tools, equipment and supplies used at the site for the delivery of Rescue Systems 2 / Structure Collapse Technician Bridge classes.
  ■ This includes, but is not limited to, power tools, hand tools, and shoring materials.

■ Orientation
  ■ Classroom
  ■ Audiovisual equipment
  ■ Wash areas
  ■ Bathrooms
  ■ Rehabilitation area
  ■ Safe and adequate parking

■ Shoring
  ■ Structure(s) adequate for operations of interior and exterior shoring systems that is of sound and safe engineering design.
    ■ Area large enough to accommodate lumber supply (near cutting station).
  ■ Interior Shores
    ■ 20' x 20' minimum working area with an 8' minimum ceiling height.
  ■ Vertical Shore
    ■ Area with simulated or actual joists to set one vertical shore with two posts.
  ■ Window Shore
    ■ 24" x 24" minimum window opening.
  ■ Horizontal / Door Shore
    ■ Hallway or door opening with vertical walls that are at least 30" wide.
  ■ Sloped Floor Shore
    ■ 20' x 20' minimum working area with a 12' wide x 12' long sloped surface.
    ■ Configured so that the sloped surface is no shorter than 3' in height at the low end.
    ■ Slope angle to be at least 6" in 10' (3 deg. 5%) to a maximum of 120" in 10' (45 deg. 100%).
    ■ Earth or hard surface.
  ■ Raker Shore
    ■ 20' x 20' minimum working area.
    ■ 16' x 16' minimum wall.
  ■ Cutting station.
    ■ 20' x 20' minimum working area.
    ■ Cutting table built to USAR specifications.
- Powder Actuated Tools
  - 20' x 20' minimum working area.
  - Poured concrete 3" minimum thickness
    - (1) One square foot minimum
  - Steel "I" Beam
    - (1) One foot minimum
  - Concrete / masonry blocks
- (1) One square foot minimum
- Breaking / Breaching / Cutting / Burning
  - 20' x 20' minimum working area.
    - Concrete, asphalt, or unimproved ground.
    - Concrete slab 6" minimum thickness with #3 rebar 12" on center grid pattern.
    - Gallow and Coring Tool
      - (1) One square foot per student minimum
    - Stanley Tool
      - (4) Four square feet per student minimum
    - Suitable frame or other method to secure the concrete slab perpendicular to the ground.
    - Suitable anchors to allow work while suspended from a rope system.
    - 1/4" plate steel
      - (1) One square foot per student minimum
    - Steel "I" beam
      - (1) One foot per student minimum
    - 1/2" min. wire rope or cable.
      - (1) One foot per student minimum
- Lifting / Moving
  - 60' x 60' minimum working area with 20' clear area on each side.
    - Concrete, asphalt, or unimproved ground
    - Two (2) 30' x 30' minimum working areas.
      - Concrete or asphalt
    - Crane
      - 14 ton minimum
    - Area for crane to set up
      - Concrete, asphalt, or unimproved ground
    - Two (2) 3' x 3' x 3' concrete cubes.
    - One (1) 5' x 8' x 12" reinforced concrete slab.
    - One (1) 4' x 8' minimum, solid reinforced concrete cylinder
    - Three (3) 5' x 8' x 6" minimum, reinforced concrete slabs
    - Two (2) 30" high by 5" long minimum concrete barrier
    - Other irregular shaped concrete and/or steel objects

SITE DEVIATION
- In the event that a training site has a facility, structure, or prop that does not comply with the Rescue Systems 2 / Structure Collapse Technician Bridge Site Requirements and Equipment Standards, the site has the opportunity to apply for a site deviation.
- A Rescue Systems 2 / Structure Collapse Technician Bridge Senior Instructor or designee submits to the Chief of State Fire Training a formal letter requesting site deviation. This letter must describe the site deviation in detail by listing:
  - The need and parameters of the deviation.
  - New or revised lesson plans linked to the deviation that ensure consistency with the standards, Terminal Objective and Enabling Objectives of the approved Rescue Systems 2 / Structure Collapse Technician Bridge curriculum.
  - Demonstration, either live or through visual aids, of any deviated technique or procedure.
- The Chief of State Fire Training will review the request for site deviation.
  - Any deficiencies will be appropriately documented and discussed with the Rescue Systems 2 / Structure Collapse Technician Bridge Senior Instructor or designee requesting the site deviation.
  - If site deviation is denied, a provisional accreditation may be granted at this time.
  - If a site is not approved, they have three (3) months to comply with the site requirements identified as deficient in the inspection report.
EQUIPMENT STANDARDS

- The equipment listed below is the minimum for each Rescue Systems 2 / Structure Collapse Technician Bridge—Training Site.
- Student safety is of paramount importance when conducting the type of high risk training associated with the Rescue Systems 2 / Structure Collapse Technician Bridge course.
- All PPE shall be the responsibility of the student and shall meet agency and site requirements.
- Lumber List does not include material for prop construction.
- This list is the equipment and materials needed to conduct a one (1) squad class of 12 students. If conducting a class with two (2) or more squads, the list will need to be adjusted accordingly.
COURSE INFORMATION AND REQUIRED MATERIALS

January 2019 May 2015

Course: Rope Rescue Technician (2013)
Hours: 40
Designed For: All fire service and allied emergency response personnel
Description: This course will prepare participants to undergo competency testing for high angle rescue. The scope of the program is to familiarize participants with the high angle environment and experience; and for them to safely participate in the engineering and operation of simple to complex rescue systems
Prerequisites: Rescue Systems 1 (2009) and Low Angle Rope Rescue Operations (LARRO)
OR Rescue Systems 1 (prior to 2009)
Certification: None
Class Size: 48
Student/Instructor Ratio: 12:1
Instructor Ratio: 6:1 during highline operations
*Senior Instructor required for 1-4 module delivery. Senior Instructor cannot be a Primary Instructor in 3 or 4 module classes
Restrictions: Training site meets site requirements and equipment standards.

ROPE RESCUE TECHNICIAN COURSE PLAN

CHAPTER 1: COURSE INTRODUCTION .................................................................1:00
CHAPTER 2: ROPE RESCUE EQUIPMENT .......................................................2:00
CHAPTER 3: KNOTS, BENDS, AND HITCHES ...............................................2:00
CHAPTER 4: ANCHOR SYSTEMS (SV) ..............................................................2:00
CHAPTER 5: HIGH ANGLE VICTIM PACKAGING .........................................2:00
CHAPTER 6: TRAVEL RESTRICTION ..............................................................2:00
CHAPTER 7: BELAY SYSTEMS .......................................................................1:00
CHAPTER 8: MAIN LINE SYSTEMS- LOWERING AND RAISING ....................2:00
CHAPTER 9: LOAD RELEASING METHODS ..................................................1:00
CHAPTER 10: RESCUE SCENE ORGANIZATION AND MANAGEMENT ..........1:00
CHAPTER 11: KNOT PASSING .......................................................................2:00
CHAPTER 12: ASCENDING AND DESCENDING ............................................3:00
CHAPTER 13: PICK-OFFS ...........................................................................3:00
CHAPTER 14: PROTECTED CLIMBING .........................................................3:00
CHAPTER 15: HIGH ANGLE LITTER RIGGING AND TENDING .....................4:00
CHAPTER 16: ARTIFICIAL HIGH DIRECTIONALS ........................................3:00
CHAPTER 17: HIGHLINES ..........................................................................6:00
Total Hours ....................................................................................................40:00

*This is an abbreviated Course Plan. Terminal & Enabling Objectives & Site Requirements can be found on the full version located on the SFT Curriculum page of the SFT website at:
http://osfm.fire.ca.gov/training/SFTCurriculum.php

APPENDIX—TRACKING CHANGES

Page 340
NOTE: Chapters with the Skills Verification (SV) designator (Chapters 2-5) contain LARRO and RS1 rope skills that must be verified before the student may continue with the Rope Rescue Technician course. New skills are also included in these chapters.

CHAPTER 1: COURSE INTRODUCTION
Terminal Learning Objective: The student will be able to identify the course goals, planned activities to achieve those goals, and the requirements for successfully completing the Rope Rescue Technician course.

Enabling Learning Objectives:
1. Describe the course, including course objectives, syllabus, and calendar of events.
2. Demonstrate rescuer and victim safety during all Rope Rescue Technician exercises.
3. Select and use all personal protective equipment.
4. Describe the student evaluation process.

CHAPTER 2: ROPE RESCUE EQUIPMENT
Terminal Learning Objective: The student will demonstrate the proper use of the equipment used in the Rope Rescue Technician course.

Enabling Learning Objectives:
1. Describe the use/misuse of the rope rescue equipment.
2. Describe the inspection/maintenance of the rope rescue equipment.
3. Use, inspect, and maintain all rope rescue equipment.

CHAPTER 3: KNOTS, BENDS, AND HITCHES
Terminal Learning Objective: The student will identify and properly tie knots, bends, and hitches.

Enabling Learning Objectives:
1. Tie a tensionless hitch.
2. Tie optional knots, bends, and hitches as required.

CHAPTER 4: ANCHOR SYSTEMS (SV)
Terminal Learning Objective: The student will demonstrate anchor selection and anchor system construction.

Enabling Learning Objectives:
1. Describe system safety factors, critical angles, and force multipliers.
2. Describe considerations when selecting anchors.
3. Describe the types of anchors.
4. Construct the required anchor systems.

CHAPTER 5: HIGH ANGLE VICTIM PACKAGING
Terminal Learning Objective: The student will package a victim in a high angle environment.

Enabling Learning Objectives:
1. Package an ambulatory victim in a commercial victim harness.
2. Package an ambulatory victim in an improvised webbing harness.
3. Package a non-ambulatory victim in a rescue litter.

CHAPTER 6: TRAVEL RESTRICTION
Terminal Learning Objective: The student will demonstrate the selection, construction, and use of travel restriction for rescuers.

Enabling Learning Objectives:
1. Construct a travel restriction system.
2. Attach a rescuer to a travel restriction system.

CHAPTER 7: BELAY SYSTEMS
Terminal Learning Objective: The student will demonstrate proper technique to belay a load in the event of a
failure of the main line.

Enabling Learning Objectives:
1. Define key points regarding the operation of a belay.
2. Catch a load with a belay.

CHAPTER 8: MAIN LINE SYSTEMS - LOWERING AND RAISING

Terminal Learning Objective: The student will demonstrate how to construct a lowering system and convert to a raising system using simple and compound mechanical advantage.

Enabling Learning Objectives:
1. Describe system safety factors, critical angles, and force multipliers.
2. Construct and operate a lowering system.
3. Convert a lowering system to a raising system using a compound 9:1.
4. Construct and operate a simple 5:1 “pig rig.”

CHAPTER 9: LOAD RELEASING METHODS

terminal objective: The student will construct and operate a load releasing device.

Enabling Learning Objectives:
1. Demonstrate proper technique when transferring a load (e.g. an inadvertently loaded belay or converting from a raising to a lowering system).

CHAPTER 10: RESCUE SCENE ORGANIZATION AND MANAGEMENT

Terminal Learning Objective: The student will implement the Incident Command System (ICS).

Enabling Learning Objectives:
2. Size up a rescue incident
3. Create objectives, strategy and tactics
4. Give operational and safety briefings.
5. Implement rescue scene organization, management, and assign positions.
6. Use command and control in rope rescue operations.
7. Terminate the incident.

CHAPTER 11: KNOT PASSING

Terminal Learning Objective: The student will pass a knot through a lowering and raising system.

Enabling Learning Objectives:
1. Pass a knot through a friction device.
2. Pass a knot through a belay during lowering and raising operations.
3. Pass a knot through a change of direction pulley during a raising operation on the mainline.

CHAPTER 12: ASCENDING AND DESCENDING

Terminal Learning Objective: The student will construct, ascend, and descend a fixed rope in a high angle environment.

Enabling Learning Objectives:
1. Construct a fixed rope system.
2. Ascend a fixed rope.
3. Negotiate an obstacle (e.g. pass a knot or crux) while ascending a fixed rope.
4. Convert an ascending system to a descending system.
5. Descend a fixed rope.
6. Negotiate an obstacle (e.g. pass a knot or crux) while descending a fixed rope.

CHAPTER 13: PICK-OFFS

Terminal Learning Objective: The student will perform a victim pick off.

Enabling Learning Objectives:
1. Perform a victim pick off.
1. Construct a two line system for a pick-off.
2. Attach a victim to a two line system.
3. Perform a pick-off of a supported/suspended victim.
4. Perform a pick-off of an unsupported victim.

**CHAPTER 14: PROTECTED CLIMBING**

Terminal Learning Objective: The student will perform a protected climb on a natural or manmade structure.

Enabling Learning Objectives:
1. Climb a manmade structure utilizing a bottom belay or Double Bypass Lanyard; or
2. Climb a landscape feature (e.g. arborist tree rescue) utilizing a bottom belay.

**CHAPTER 15: HIGH ANGLE LITTER RIGGING AND TENDING**

Terminal Learning Objective: The student will rig and tend an occupied rescue litter in a high angle environment.

Enabling Learning Objectives:
1. Package a patient into a rescue litter.
2. Attach the occupied rescue litter to a rope rescue system with a litter tender.
3. Tend the litter basket operation both above and below the basket.
4. Negotiate obstacles and manipulate the occupied litter while being raised and lowered.
5. Move the occupied litter up and over an edge.

**CHAPTER 16: ARTIFICIAL HIGH DIRECTIONALS**

Terminal Learning Objective: The students will construct and rig an artificial high directional.

Enabling Learning Objectives:
1. Construct an artificial high directional.
2. Rig a high directional.

**CHAPTER 17: HIGHLINES**

Terminal Learning Objective: The students will construct and operate a reeving highline with a midpoint drop to transport rescuers, equipment, and an occupied litter from one elevated location to another.

Enabling Learning Objectives:
1. Describe system safety factors, critical angles, and force multipliers.
2. Construct and operate a reeving highline system to perform a midpoint drop.
3. Move an occupied litter with an attendant from one elevated location to another above an obstacle or projection.

Total Hours

**SITE REQUIREMENTS AND EQUIPMENT STANDARDS**

A Rope Rescue Technician (RRT) Training Site must have facilities, structures, work areas, materials, and equipment of adequate size, type, and quantity to fully and safely support the technical and manipulative training required to deliver the RRT curriculum.

**(A) GOALS**

1. Set minimum performance training objectives for RRT training programs.
2. Identify those performance objectives a RRT Training Site must be capable of supporting.
3. Provide the means to ensure proper curriculum delivery.
4. RRT Training Sites will meet the minimum requirements to support curriculum delivery.
   a. A completed “Request for FSTEP Course Scheduling” providing the dates and location of the upcoming course.
   b. The names of all RRT instructors must be included with the request to support class size.
(B) **SITE CAPACITY**

An RRT Training Site is evaluated on its ability to support the required training. A One-squad site is the minimum and is capable of delivering training up to twelve (12) students or one (1) squad. Additional sites may be necessary to support the training for twenty-four (24) students, and up to a maximum of forty eight (48) students simultaneously. Each capacity level represents the maximum number of students or squads that may be taught on the site at any given time. This maximum number will be determined based on the suitability of the site to safely train (12), twenty four (24), thirty six (36), or forty eight (48) students.

(1) One-squad site.

   (a) Supports the instruction of one (1) squad, a maximum of twelve (12) students on the site.
   (b) One (1) RRT Senior Instructor is required for a student instructor ratio of 12:1*.

(2) Two-squad site.

   (a) Supports the instruction of two (2) squads, a maximum of twenty-four (24) students on the site.
   (b) One (1) RRT Primary Instructor and one (1) RRT Senior Instructor are required for a student instructor ratio of 12:1*.

(3) Three-squad site.

   (a) Supports the instruction of three (3) squads, a maximum of thirty-six (36) students on the site.
   (b) Three (3) RRT Primary Instructors are required for a student instructor ratio of 12:1*.
   (c) One (1) RRT Senior Instructor is required.

(4) Four-squad site.

   (a) Supports the instruction of four (4) squads, a maximum of forty eight (48) students on the site.
   (b) Four (4) RRT Primary Instructors are required for a student instructor ratio of 12:1*.
   (c) One (1) RRT Senior Instructor is required.

* Two (2) SFT registered RRT instructors are required for each highline

(C) **SITE REQUIREMENTS**

RRT Sites will be inspected by a RRT Senior Instructor for compliance with the RRT Site Requirements and Equipment Standards. The following are minimum requirements for a RRT Training Site:

(1) The requesting agency assumes all responsibility, liability, and maintenance for the engineering design, strength, stability, and adequacy of all props including anchor points and tie-offs.

(2) The requesting agency further assumes all responsibility, liability, and maintenance for all tools, equipment, and supplies used at the site for the delivery of RRT classes. This includes, but is not limited to, ladders, ropes, rescue hardware and software.

(3) Additionally, the site must meet the following:

   (a) All high angle evolutions shall be performed in an environment in which the load is predominately supported by the rope rescue system.
   (b) A minimum vertical distance of 20’ is required for all high angle evolutions.
   (c) A minimum horizontal travel distance of 20’ and vertical height of 20’ measured from the ground to loaded mid-span is required for highline evolutions.
   (d) The minimum required ascending distance is 20’.
   (e) The minimum required protected climb distance is 20’.
   (f) There must be an obstacle to negotiate while litter tending.
   (g) There must be an obstacle to negotiate while ascending and descending.
   (h) There must be an edge problem that the team must negotiate for the litter tender evolution.

(D) **FACILITIES**
(1) Classroom of adequate size and capability (audio/visual aids) to support classroom training.
(2) Wash areas.
(3) Bathrooms.
(4) Rehabilitation area.
(5) Safe and adequate parking.

(E) EQUIPMENT LIST AND STANDARDS

The following is a list of the minimum equipment that is required to conduct a Rope Rescue Technician course. Refer to the section (F) ENDNOTES for additional information.

* Indicates must meet NFPA 1983 “G” rating

#### (F) ENDNOTES

A. 1 backboard per site

B. Edge protection can be manufactured (rope rollers, etc.) or improvised (split fire hose, etc.). There shall be adequate amounts of edge protection available for concurrent running scenarios.

C. While Gibbs Ascenders™ are acceptable, handled ascenders are preferred.

D. Commercial or field assembled (webbing or cordelette) complete with General Use carabiners. These carabiners are in addition to the amounts specified under the carabiner and prusik categories.

E. Each rope of the two track highline must be one continuous length of rope. If your highline span is greater than 150 feet you must acquire longer ropes to span the gap. You may also need a longer reeve line rope.

F. 5 of the 15 pulleys must be single sheave prusik minding. 2 of the 15 should be double sheave prusik minding. Subsequent squads may not require additional double sheave pulleys.

G. Commercial or field assembled complete with General Use carabiners and prusiks, if field assembled these carabiners and prusiks are in addition to the amounts specified under the carabiner and prusik categories.

H. If pickets are used a sledge hammer is required.

I. Can be commercial or field assembled from one inch tubular webbing.

J. If performing the optional litter scoop evolution, a mini MA system will be needed to lower and raise the foot end of the litter. Can be commercial or improvised.

K. Can be a commercial (Arizona Vortex™, Terradaptor™, etc.) or improvised high directional (4x4 lumber). If concurrent highline stations are being run, one additional artificial high directional per highline must be provided for each highline scenario.

L. “G” rated pulleys that have a built in swivel will satisfy this option.

M. This can be accomplished by having a person perform a hard, unexpected jerk on the end of the belay system. Whatever method the instructor chooses to demonstrate this skill, it SHALL NOT be performed using a live load.

#### Additional Notes:

1. Instructors at “Agency Specific” classes that use the CMC MPD™, Traverse 540 Rescue Belay™, and other similar devices may use these devices during the class.

2. Instructors at “open enrollment” classes should continue to show “traditional” methods of lowering & raising to their students (i.e. RPM). This does not mean that devices like the CMC MPD™, Traverse 540 Rescue Belay™, and other similar devices cannot be shown to students.
Course Information and Required Materials

Course: Trench Rescue Technician (2014)

Hours: 24

Designed For: All fire service and allied emergency response personnel

Description: This three day (24 hour) course will take you from classroom discussion to working safely and efficiently in a trench rescue environment. This hands-on training program will cover topics that include: Trench and Excavation Regulations, Understanding Soil, Trench Configurations, Trench Hazards, Rescue Team Preparation, Incident Response, Initial On Scene and Pre-Entry Operations, Shoring Systems and Components, Installation of Shoring Systems, Victim Rescue and Recovery and Incident Termination

Prerequisites: Rescue Systems 1

Certification: None

Class Size: 24

Student/Instructor Ratio: 12:1

Instructor Ratio: 1-Squad Site: 12:1 (12 total students) with 1 Senior Instructor

2-Squad Site: 12:1 (24 total students) with 1 Senior Instructor and 1 Primary Instructor

Restrictions: The Senior Instructor must validate the trench rescue training site for compliance with the Trench Rescue Site Requirements and Equipment Standards

Trench Rescue Technician Course Plan

Introduction

Terminal Learning Objective: Students provided with information from this chapter, along with headlines from current events, will be able to recall fatality statistics and case histories and accurately apply this information to potential liabilities in trench rescue operations.

Chapter 1: OSHA Trench Regulations

Terminal Learning Objective: Students, with the information provided in this chapter, will demonstrate their knowledge by accurately citing specific regulations that impact trench rescue operations.

Chapter 2: Understanding Soil

Terminal Learning Objective: Students provided with information from this chapter, will be able to accurately describe soil classifications and types, soil testing procedures and other factors affecting trench stability.

Chapter 3: Trench Configurations

Terminal Learning Objective: Students, with the information provided in this chapter, will be able to accurately recognize types of trenches and excavations, along with the types of collapses, collapse patterns, and factors leading to trench failures.
CHAPTER 4: Trench Hazards
Terminal Learning Objective: Students provided with the information provided in this chapter, will accurately describe the different types of hazards associated in and around the trench incident as well as how to mitigate those hazards.

CHAPTER 5: Rescue Team Preparation
Terminal Learning Objective: Students, with information provided in this chapter, will accurately recall and discuss rescue team preparation including rescue tool maintenance and use, scene accountability, personal protective equipment and scene safety.

CHAPTER 6: Incident Response
Terminal Learning Objective: Students provided with information from this chapter, will accurately outline trench rescue considerations when responding to a given trench rescue incident.

CHAPTER 7: Initial On-Scene Operations
Terminal Learning Objective: Students with information provided in this chapter, will be able to accurately identify and integrate the operational priorities at a given trench rescue incident.

CHAPTER 8: Pre-Entry Operations
Terminal Learning Objective: Students, provided with information from this chapter along with the provided tools, equipment, and materials, will accurately describe and demonstrate the pre-entry operation essential to safely perform in-and-around a given trench rescue incident.

CHAPTER 9: Protective Systems
Terminal Learning Objective: Students, with information provided in this chapter along with the provided tools, equipment, and materials, will accurately identify and demonstrate various types of protective systems in trench rescue operations.

CHAPTER 10: Shoring Systems and Components
Terminal Learning Objective: Students, provided with information from this chapter along with the provided tools, equipment, and materials, will accurately identify shoring system components and demonstrate how they are deployed and used in a given trench rescue operation.

CHAPTER 11
Terminal Learning Objective: Students, with information provided in this chapter along with the provided tools, equipment, and materials, will accurately demonstrate the installation of shoring systems in a given trench rescue operation.

CHAPTER 12: Victim Rescue and Recovery
Terminal Learning Objective: Students, provided with information from this chapter along with the provided tools, equipment, and materials, will accurately identify factors that affect victim search, soil removal, and demonstrate victim rescue and recovery at a given trench rescue operation.

CHAPTER 13: Incident Termination
Terminal Learning Objective: Students, with information provided in this chapter along with the provided tools, equipment, and materials, will accurately demonstrate all of the elements necessary to terminate a given trench rescue operation.

Course Hours: 24:00

*This is an abbreviated Course Plan. Enabling Objectives & Site Requirements can be found on the full version.
INTRODUCTION

Terminal Learning Objective: Students provided with information from this chapter, along with headlines from current events, will be able to recall fatality statistics and case histories and accurately apply this information to potential liabilities in trench rescue operations.

Enabling Learning Objective:
- Cite fatality and injury statistics from case histories and recent trench rescue incidents.
- Understand their personal liability and the potential for criminal prosecution, including monetary fines when standard operation guidelines are not adhered to.

CHAPTER 1

Terminal Learning Objective: Students, with the information provided in this chapter, will demonstrate their knowledge by accurately citing specific regulations that impact trench rescue operations.

Enabling Learning Objective:
- Cite Federal Standard for Trenching and Excavations
- Cite California Standard for Trenching and Excavations
- List examples of other related regulations that may impact trenching operations
- Understand the importance of OSHA regulations as they relate to training and exercises

CHAPTER 2

Terminal Learning Objective: Students provided with information from this chapter, will be able to accurately describe soil classifications and types, soil testing procedures and other factors affecting trench stability.

Enabling Learning Objective:
- Discuss basic soil facts and statistics
- Cite soil classifications and types
- Demonstrate soil testing
- Identify trench hazards and other factors affecting soil

CHAPTER 3

Terminal Learning Objective: Students, with the information provided in this chapter, will be able to accurately recognize types of trenches and excavations, along with the types of collapses, collapse patterns, and factors leading to trench failures.

Enabling Learning Objective:
- Define and describe a trench
- Identify the different types of trenches
- Recognize different types of collapse
- Distinguish various collapse patterns
- Identify the points of a trench

CHAPTER 4

Terminal Learning Objective: Students provided with the information provided in this chapter, will accurately describe the different types of hazards associated in and around the trench incident as well as how to mitigate those hazards.

Enabling Learning Objective:
- Identify types of trench collapses and failures
- Identify hazardous trench soil conditions
- Understand gravity as a hazard
- Identify water hazards
- Understand surcharge loads
APPENDIX—TRACKING CHANGES

COURSE INFORMATION AND REQUIRED MATERIALS

January 2019 May 2015

- Identify underground utilities as hazards
- Understand hazardous atmospheres
- Identify vibration hazards
- Develop a mitigation plan for identified hazards

CHAPTER 5

Terminal Learning Objective: Students, with information provided in this chapter, will accurately recall and discuss rescue team preparation including rescue tool maintenance and use, scene accountability, personal protective equipment and scene safety.

Enabling Learning Objective:

- Discuss the importance of trench rescue training
- Identify and discuss the use of proper tools and equipment
- Discuss the importance of rescue team building
- Discuss the importance of accountability and discipline
- Discuss mitigation techniques and the importance of safety working in and around trench emergencies
- Discuss and demonstrate proper personal protective equipment (PPE)

CHAPTER 6

Terminal Learning Objective: Students provided with information from this chapter, will accurately outline trench rescue considerations when responding to a given trench rescue incident.

Enabling Learning Objective:

- Discuss the importance of the incident location
- Recall the importance of the Time of day
- Discuss the impact of weather on trench rescue operations
- Identify and develop Enabling Learning Objective strategies that restrict incident access
- Recognize the importance of responding with adequate trench rescue resources

CHAPTER 7

Terminal Learning Objective: Students with information provided in this chapter, will be able to accurately identify and integrate the operational priorities at a given trench rescue incident.

Enabling Learning Objective:

- Understand the importance of initiating the Incident Command System
- Demonstrate how to approach the trench
- Recall how to conduct a proper size-up.
- Understand the importance of the Reporting/Responsible party
- Identify all of the potential hazards at the trench incident
- Accurately recognize USA markings
- Students will understand victim considerations
- Conduct a pre-entry briefing

CHAPTER 8

Terminal Learning Objective: Students, provided with information from this chapter along with the provided tools, equipment, and materials, will accurately describe and demonstrate the pre-entry operation essential to safely perform in-and-around a given trench rescue incident.

Enabling Learning Objective:

- Assign a site Safety Officer
- Demonstrate the proper placement of ladders
- Establish edge protection around the trench
- Demonstrate the proper method of clearing the spoil
- Identify proper air-monitoring techniques
• Demonstrate the proper use of ventilation equipment
• Identify and mark unsafe hazards
• Conduct a Pre-Entry Briefing

CHAPTER 9
Terminal Learning Objective: Students, with information provided in this chapter along with the provided tools, equipment, and materials, will accurately identify and demonstrate various types of protective systems in trench rescue operations.

Enabling Learning Objective:
• Identify sloping and benching systems
• Identify trench shields and boxes
• Demonstrate timber shoring systems
• Demonstrate mechanical shoring systems including hydraulic, pneumatic and screw jacks

CHAPTER 10
Terminal Learning Objective: Students, provided with information from this chapter along with the provided tools, equipment, and materials, will accurately identify shoring system components and demonstrate how they are deployed and used in a given trench rescue operation.

Enabling Learning Objective:
• Describe a shoring system and components
• Demonstrate the placement of shoring systems in a trench
• Identify how many shoring systems are used in a trench rescue
• Identify and establish the safe zones are in the trench

CHAPTER 11
Terminal Learning Objective: Students, with information provided in this chapter along with the provided tools, equipment, and materials, will accurately demonstrate the installation of shoring systems in a given trench rescue operation.

Enabling Learning Objective:
• Demonstrate the use of Trench Data Sheets
• Set-up and demonstrate the use of a cutting station
• Demonstrate the installation of sheeting and panels
• Apply shoring systems concepts and components
• Demonstrate proper nail patterns and positive connections
• Demonstrate the use of backfill and back-shoring

CHAPTER 12
Terminal Learning Objective: Students, provided with information from this chapter along with the provided tools, equipment, and materials, will accurately identify factors that affect victim search, soil removal, and demonstrate victim rescue and recovery at a given trench rescue operation.

Enabling Learning Objective:
• Discuss techniques used for victim search in a trench
• Demonstrate soil removal as it relates to victim recovery
• Demonstrate victim treatment in a trench rescue
• Demonstrate victim packaging in a trench rescue
• Demonstrate victim removal in a trench rescue

CHAPTER 13
Terminal Learning Objective: Students, with information provided in this chapter along with the provided tools, equipment, and materials, will accurately demonstrate all of the elements necessary to terminate a given trench rescue operation.
Enabling Learning Objective:
- Provide incident documentation and notifications
- Demonstrate techniques that increase rescuer safety during removal of shoring and equipment from the trench
- Identify the techniques to keep the scene safe upon leaving the area
- Describe the overall goals of critical incident stress debriefing.

Course Hours..............................................................................................................................................24:00

TRENCH RESCUE TECHNICIAN TRAINING SITE REQUIREMENTS
A Trench Rescue Technician Training Site must have facilities, structures, work areas, materials, props, tools, and equipment of adequate size, type, and quantity, to safely support the technical and manipulative training required to deliver the Trench Rescue Technician curriculum.

(A) GOALS
- Set minimum performance training objectives for Trench Rescue Technician training programs
- Provide the means to ensure proper curriculum delivery
- Trench Rescue Technician Training Sites will meet the minimum requirements to support curriculum delivery
  - The Trench Rescue Course Request shall provide the address and location of the upcoming course.

(B) SITE CAPACITY
A Trench Rescue Technician training site, evaluated by the Senior Instructor, will insure that the site has the capacity to deliver the required training safely. A one-squad site is capable of delivering training to twelve (12) students or one (1) squad. A two-squad site may be capable of delivering training to a maximum of twenty-four (24) students simultaneously.

- One-squad Site
  - Supports the instruction for teaching one (1) squad, a maximum of twelve (12) students on the site
  - One (1) Trench Rescue Technician Senior Instructor is required for a student instructor ratio of 12:1

- Two-squad Site
  - Supports the instruction for teaching two (2) squads, a maximum of twenty-four (24) students on the site
  - One (1) Trench Rescue Technician Senior Instructor and one (1) Trench Rescue Technician Primary Instructor are required to maintain a student instructor ratio of 12:1

(C) SENIOR TRENCH RESCUE TECHNICIAN SENIOR INSTRUCTOR SITE RESPONSIBILITIES
- The Senior Instructor will validate the training site for compliance with the Trench Rescue Technician Site Requirements and Equipment Standards prior to submitting a course request to State Fire Training
- Any deficiencies in the training site, or equipment, shall be corrected before the class start date

(D) SITE REQUIREMENTS
The following are minimum requirements for a Trench Rescue Technician Training Site:

- The facilities and props should be in close proximity to each other to facilitate timeframes.
- The requesting agency assumes all responsibility, liability, and maintenance for the engineering design, strength, stability, and adequacy of all props.
- The requesting agency further assumes all responsibility, liability, and maintenance for all tools, equipment and supplies used at the site for the delivery of Trench Rescue Technician classes. This includes, but is not limited to, ladders, ropes, rescue hardware and software, hand tools and power tools.

(F) **FACILITIES**

- Classroom with audiovisual equipment
- Wash areas
- Bathrooms
- Rehabilitation area
- Safe and adequate parking
- Area to demonstrate and practice skills (trench approach and size-up, cutting station, panel construction, tools and equipment skills stations)
- Open field area with approved excavated trenches. See page 5
- One (1) “L” Trench and one (1) “T” Trench excavated according to trench diagram.
  1) “L” Trench. Both legs of the trench to be 36” wide; each leg to be 20’ long. One leg 8’ deep and one leg 10’ deep
  2) “T” Trench. The top of the “T” is to be 36” wide, 23’ long and 8’ deep. The upright portion of the “T” is 10’ long, 60” wide and 8’ deep
- Trenches must be in suitable soil for training with no extreme hazards
- Trenches will be collapsed with manikins for each scenario

(F) **EQUIPMENT STANDARDS**

- The equipment listed below is the minimum for each Trench Rescue Technician Training Site to support one (1) squad/twelve (12) students or two (2) squads/twenty-four (24) students
- Student safety is of paramount importance when conducting this type of high-risk training associated with a Trench Rescue Technician course

!! A Trench Rescue Technician Resource List is required for each class. !!

**Diagram Next Page**
Required Trench Rescue Technician Trench Props

- Dig trenches a minimum of 20’ apart
- Square corners, lip and bottom
