Wildland Fire Apparatus Operations
Course Plan

Course Details

Description: This course provides the knowledge and skills needed to operate and perform preventive maintenance on a wildland fire apparatus. Topics include routine tests, inspections, and servicing functions on the systems and components unique to wildland fire apparatus; operating a wildland fire apparatus; and producing an effective fire stream.

Designed For: Personnel who drive and operate a wildland fire apparatus

Course Prerequisites: OSFM certified Fire Fighter 1 or certified Fire Fighter 2 tenured path (Appointment to the rank of Officer (Lieutenant or higher) waives this prerequisite. Appointment to the CAL FIRE rank of Fire Apparatus Engineer is equivalent to Officer level. Performing in an “acting” capacity does not fulfill this requirement.)

One of the following driver’s licenses: Class C fire fighter endorsed, Commercial A, or Commercial B

Standard: Complete all activities, skills, and tests
Complete the summative test with a minimum score of 80%

Hours (Total): 24 hours (4.5 lecture / 19.5 application)

Maximum Class Size: 30

Instructor Level: One primary instructor and sufficient assistant instructors to meet skills ratio requirements

Instructor/Student Ratio: 1:30 (lecture) / 1:10 (application)

Restrictions: Sufficient fire apparatus and space to accommodate classroom and skills training

SFT Designation: CFSTES

Required Resources

Instructor Resources

To teach this course, instructors need:

  
or
- Maintenance and inspection forms
- Manufacturer’s specifications and requirements

Online Instructor Resources

The following instructor resources are available online at https://osfm.fire.ca.gov/divisions/state-fire-training/cfstes-professional-certification/:

- Wildland Fire Apparatus Operations required activities
  - Activity 3-1: Operate a Wildland Fire Apparatus Off Road
  - Activity 3-2(a): Produce an Effective Fire Stream from a Water Tank
  - Activity 3-2(b): Produce an Effective Fire Stream from a Pressurized Water Source
  - Activity 3-2(c): Produce an Effective Fire Stream from a Static Water Source

Student Resources

To participate in this course, students need:

  
or
- Personal protective equipment

Facilities, Equipment, and Personnel

The following facilities, equipment, or personnel are required to deliver this course:

- Standard learning environment or facility
- Writing board or paper conference pads
- Markers, erasers
- Computer or tablet with presentation or other viewing software
- Amplification devices
- Projector and screen
- Sufficient wildland fire apparatus to accommodate the students in the class
  - Recommend at least 30 minutes of drive time per student across Topics 3-1 and 3-2
- Tools and equipment for inspection and testing
- Water tank
• Pressurized water source (hydrant or supply line from another pumping apparatus)
• Static water source (drafting pit, portable tank, or natural water source)
• Hard suction hose
• Foam portioning system
• Foam or foam substitute
• Tools and equipment
• Personal protective equipment (students)
• Adequate space and terrain for required activities

* Individual application time determined by instructor for a total of 17 hours for Unit 3. Recommend at least 30 minutes of drive time per student across Topics 3-1 and 3-2.

## Time Table Key

1. The Time Table documents the amount of time required to deliver the content included in the course plan.

2. Time is documented using the quarter system: 15 min. = .25 / 30 min. = .50 / 45 min. = .75 / 60 min. = 1.0.

3. The Course Totals do not reflect time for lunch (1 hour) or breaks (10 minutes per each 50 minutes of instruction or assessment). It is the instructor’s responsibility to add this time based on the course delivery schedule.

4. Application (activities, skills exercises, and formative testing) time will vary depending on the number of students enrolled. The Application time documented is based on the maximum class size identified in the Course Details section.
5. Summative Assessments are determined and scheduled by the authority having jurisdiction. These are not the written or psychomotor State Fire Training certification exams. These are in-class assessments to evaluate student progress and calculate course grades.
Unit 1: Introduction

Topic 1-1: Orientation and Administration

Terminal Learning Objective
At the end of this topic a student will be able to identify facility and classroom requirements and identify course objectives, events, requirements, assignments, activities, skills exercises, resources, evaluation methods, and participation requirements in the course syllabus.

Enabling Learning Objectives
1. Identify facility requirements
   • Restroom locations
   • Food locations
   • Smoking locations
   • Emergency procedures
2. Identify classroom requirements
   • Start and end times
   • Breaks
   • Electronic device policies
   • Special needs and accommodations
   • Other requirements as applicable
3. Review course syllabus
   • Course objectives
   • Calendar of events
   • Course requirements
   • Student evaluation process
   • Assignments
   • Activities and skills exercises
   • Required student resources
   • Class participation requirements

Discussion Questions
1. Determined by instructor

Application
1. Determined by instructor

Instructor Notes
1. None
Topic 1-2: Wildland Fire Apparatus Driver/Operator Certification

Terminal Learning Objective
At the end of this topic a student will be able to identify the requirements for Wildland Fire Apparatus Driver/Operator certification and be able to describe the certification task book and testing process.

Enabling Learning Objectives
1. Identify the prerequisites for certification
   - OSFM certified Fire Fighter 1
   or
   - Appointment to the rank of Officer (Lieutenant or higher) or CAL FIRE rank of Fire Apparatus Engineer waives this certification prerequisite. *(Performing in an “acting” capacity does not fulfill this requirement.)*
   and
   - Valid Class C Firefighter Endorsed or Commercial A or Commercial B driver’s license (per California Vehicle Code, Section 12804.11)
2. Identify the course work required for certification
   - 1A: Fire Apparatus Driver/Operator (2008 or newer)
   - 1B: Pumping Apparatus Operations (2008 or newer)
   - 1E: Wildland Fire Apparatus Operations (2008 or newer)
3. Identify the exams required for certification
   - No exams outside of class testing
4. Identify the task book requirements for certification
5. Identify the experience requirements for certification
   - A minimum of one year full-time paid experience in a California fire department with the primary responsibility of operating a tillered apparatus
   - A minimum of two years volunteer of part-time paid experience in a California fire department with the primary responsibility of operating a tillered apparatus
6. Identify the position requirements for certification
   - Appointed to the rank or position of Fire Apparatus Driver/Operator (performing in an acting capacity does not qualify)
7. Describe the certification task book process
8. Describe the certification testing process
   - Not applicable

Discussion Questions
1. Determined by instructor

Application
1. Determined by instructor

Instructor Notes
1. None
Unit 2: Preventive Maintenance

Topic 2-1: Performing and Documenting Visual and Operational Checks

Terminal Learning Objective
At the end of this topic a student, given a wildland fire apparatus, tools and equipment, manufacturer’s specifications, inspection forms, and AHJ policies and procedures, will be able to perform and document the visual and operational checks on the systems and components unique to wildland fire apparatus (water tank and/or other extinguishing agent levels (if applicable), pumping systems, foam systems, four-wheel drive system), in addition to those in NFPA 1002 4.2.1, to verify their operational status.

Enabling Learning Objectives
1. Describe wildland fire apparatus systems and components
   • Foam systems
   • Pumping systems
   • Water tank and/or other extinguishing agent levels (if applicable)
   • Four-wheel drive system
2. Describe manufacturer’s specifications and requirements
3. Describe policies and procedures of the jurisdiction, including documentation requirements
4. Describe inspection requirements when transitioning from off-road to on-road operations
5. Inspect wildland fire apparatus
6. Use tools and equipment
7. Recognize system problems and out-of-service criteria
8. Correct any deficiency noted according to policies and procedures and/or manufacturer’s specifications and requirements

Discussion Questions
1. What equipment is unique to a wildland fire apparatus?
2. Why is it important to do a pre-trip and post-trip inspection?
3. What should be inspected when transitioning from off-road to on-road driving?
4. How do you maintain the four-wheel drive during the off-season?
5. How can off-road driving affect the air filters?

Application
1. Given a wildland fire apparatus, inspection forms, and tools and equipment, divide students into groups and have each group perform a wildland fire apparatus inspection and present their findings.

Instructor Notes
1. None

CTS Guide Reference: CTS 10-1
Unit 3: Operations

Topic 3-1: Operating a Wildland Fire Apparatus

Terminal Learning Objective
At the end of this topic a student, given a wildland fire apparatus, predetermined route off of a public way that incorporates the maneuvers and features that the driver/operator is expected to encounter during normal operations, applicable laws and regulations, and AHJ policies and procedures, will be able to operate a wildland fire apparatus in compliance with all applicable jurisdictional rules and regulations and operational limitations of the apparatus.

Enabling Learning Objectives
1. Recognize wildland fire apparatus resource typing
2. Explain the effects of braking reaction time and load factors on vehicle control
3. Explain the effects of high center of gravity on:
   • Roll-over potential
   • General steering reactions
   • Speed
   • Centrifugal force
4. Identify applicable laws and regulations
5. Identify policies and procedures of the jurisdiction
6. Describe the principles of:
   • Skid avoidance
   • Night driving
   • Shifting
   • Gear patterns
7. Describe how to negotiate:
   • Intersections
   • Railroad crossings
   • Bridges
   • Transition from on-road to off-road
   • Dozer trails (non-developed roadways)
   • Hillside/incline driving, braking, and turning
8. Identify weight and height limitations for both roads and bridges
9. Describe how to identify and operate automotive gauges (if applicable)
10. Explain operational limits
    • 2-wheel vs. 4-wheel drive
    • 4-wheel drive high vs. 4-wheel drive low
11. Discuss off-road wildland fire apparatus emergencies
12. Identify communication needs between wildland fire apparatus driver/operator and crew
13. Operate passenger restraint devices
14. Maintain safe following distances
15. Maintain control of the wildland fire apparatus while accelerating, decelerating, and turning, given road, weather, and traffic conditions

16. Operate the wildland fire apparatus under:
   - Adverse environmental conditions
   - Adverse driving surface conditions
   - Nonemergency conditions

17. Use automotive gauges and controls (if applicable)

Discussion Questions
1. How do you determine if a bridge is safe to cross?
2. What are some ways to estimate slope in the field?
3. When should you inhibit exhaust regeneration?
4. When should you engage the front axle?
5. How does the use of the auxiliary brake differ between on- and off-road driving?
6. What tactics can you use to maintain control when encountering uneven road surfaces?
7. What is the safest following distance on a mid-slope road?
8. In what situations might you use a spotter?

Application
1. Given pictures of wildland driving environments, have students identify and discuss hazards and mitigation techniques.
2. Activity 3-1: Operate a Wildland Fire Apparatus Off Road

Instructor Notes
1. None

CTS Guide Reference: CTS 11-1
Topic 3-2: Producing an Effective Fire Stream

Terminal Learning Objective
At the end of this topic a student, given a wildland fire apparatus, water tank, pressurized water source, and static water source, will be able to produce an effective fire stream by engaging the pump, setting all pressure-control and vehicle safety devices, and achieving the rated flow of the nozzle while monitoring the apparatus for potential problems.

Enabling Learning Objectives
1. Describe hydraulic calculations for friction loss and flow using both written formulas and estimation methods
2. Describe safe operation of the pump
3. Describe correct apparatus placement
4. Describe personal safety considerations
5. Identify the reliability of static water sources
6. Describe mobile attack operations
   - Hoseline selection
   - Pump engagement
   - Vegetation and terrain considerations
   - Communications
   - Tactics
   - Pressure relief (valve operations)
7. Identify problems related to:
   - Small diameter or dead-end mains
   - Low-pressure systems
   - Private water supply systems
8. Position a wildland fire apparatus to obtain water from:
   - A fire hydrant
   - At a static water source
   - Another apparatus
9. Position apparatus for fire attack
10. Transfer power from vehicle engine to pump
11. Draft
12. Operate pumper pressure control systems
13. Operate the volume/pressure transfer valve (multistage pumps only)
14. Operate auxiliary cooling systems
15. Make the transition between internal and external water sources
16. Assemble hose lines, nozzles, valves, and appliances

Discussion Questions
1. What is the importance of water conservation and how do you achieve it?
2. What are the dangers of mobile attack with personnel in front of the engine on a hose line?
3. What needs to be considered when spotting an apparatus at a static water source?
4. How do you determine the pump discharge pressure when you can no longer see the nozzle?
5. How does slope affect discharge pressure?

**Application**
1. Activity 3-2(a): Produce an Effective Fire Stream from a Water Tank
2. Activity 3-2(b): Produce an Effective Fire Stream from a Pressurized Water Source
3. Activity 3-2(c): Produce an Effective Fire Stream from a Static Water Source

**Instructor Notes**
1. Candidates need to complete all three activities.

**CTS Guide Reference:** CTS 11-2
How to Read a Course Plan

A course plan identifies the details, logistics, resources, and training and education content for an individual course. Whenever possible, course content is directly tied to a national or state standard. SFT uses the course plan as the training and education standard for an individual course. Individuals at fire agencies, academies, and community colleges use course plans to obtain their institution’s consent to offer course and provide credit for their completion. Instructors use course plans to develop syllabi and lesson plans for course delivery.

Course Details
The Course Details segment identifies the logistical information required for planning, scheduling, and delivering a course.

Required Resources
The Required Resources segment identifies the resources, equipment, facilities, and personnel required to deliver the course.

Unit
Each Unit represents a collection of aligned topics. Unit 1 is the same for all SFT courses. An instructor is not required to repeat Unit 1 when teaching multiple courses within a single instructional period or academy.

Topics
Each Topic documents a single Terminal Learning Objective and the instructional activities that support it.

Terminal Learning Objective
A Terminal Learning Objective (TLO) states the instructor’s expectations of student performance at the end of a specific lesson or unit. Each TLO includes a task (what the student must be able to do), a condition (the setting and supplies needed), and a standard (how well or to whose specifications the task must be performed). TLOs target the performance required when students are evaluated, not what they will do as part of the course.

Enabling Learning Objectives
The Enabling Learning Objectives (ELO) specify a detailed sequence of student activities that make up the instructional content of a lesson plan. ELOs cover the cognitive, affective, and psychomotor skills students must master in order to complete the TLO.

Discussion Questions
The Discussion Questions are designed to guide students into a topic or to enhance their understanding of a topic. Instructors may add to or adjust the questions to suit their students.
Application
The Application segment documents experiences that enable students to apply lecture content through cognitive and psychomotor activities, skills exercises, and formative testing. Application experiences included in the course plan are required. Instructors may add additional application experiences to suit their student population if time permits.

Instructor Notes
The Instructor Notes segment documents suggestions and resources to enhance an instructor’s ability to teach a specific topic.

CTS Guide Reference
The CTS Guide Reference segment documents the standard(s) from the corresponding Certification Training Standard Guide upon which each topic within the course is based. This segment is eliminated if the course is not based on a standard.

Skill Sheet
The Skill Sheet segment documents the skill sheet that tests the content contained within the topic. This segment is eliminated if the course does not have skill sheets.
