This map has been created by CAL FIRE’s Fire and Resource Assessment Program (FRAP) using data and models appropriate for describing development patterns, predicting future fire behavior, and determining the suitability of various types of construction materials in the Wildland-Urban Interface. The updated zones are based on additional fire science, mapping techniques, and data.

Weather. VHFHSZ maps were initially developed in the mid-1990s but are now being updated based on improved science and technology. These maps differ from the previous version in that they incorporate new data on vegetation and fuel structure, as well as improved mapping techniques for slopes and vegetation.

The Resources Agency makes no representations or warranties regarding the accuracy of data or maps. Neither the State nor the Department shall be liable under any circumstances for any direct, special, incidental, or consequential damages with respect to such data or maps.
