The State of California and the Department of Forestry and Fire Protection make no representations or warranties regarding the accuracy of data or maps. Neither the State nor the Department shall be liable under any circumstances for any direct, special, incidental, or consequential damages with respect to any claim by any user or third party on account of, or arising from, the use of data or maps.

There is no requirement for local government to report their final action to CAL FIRE when the recommended zones are zones within its jurisdiction after receiving the recommendation. Local government can add additional VHFHSZs.

The safety element of general plans shall be used to identify property whose owners must comply with natural hazards disclosure requirements at time of property transfer. Very High Fire Hazard Severity Zones (VHFHSZ) will be used by building officials for new building permits in LRA. The updated zones will also be incorporated into building codes requiring new buildings in VHFHSZs to use ignition resistant construction methods and materials. These new codes will be used to identify property whose owners must comply with natural hazards disclosure requirements at time of property transfer.

The mapping methodology can be found at [link](http://frap.cdf.ca.gov). Details on the project and specific modeling techniques, and data are available at [link](http://frap.cdf.ca.gov).
