Obtain FRAP maps, data, reports and publications on the Internet at http://frap.cdf.ca.gov. For more information, contact CAL FIRE-FRAP, PO Box 944246, Sacramento, CA 94244-2460, (916) 327-3939.

The California Building Commission adopted the Wildland-Urban Interface codes in late 2005 to be effective January 1, 2007. The version dated September 17, 2007 of the map shown here represents draft VHFHSZs within LRA, for review and comment by local government. The updated fire hazard severity zones will be used by building officials to determine appropriate construction materials for new buildings in the Wildland-Urban Interface. The updated zones will also be used by property owners to comply with natural hazards disclosure requirements at time of property sale and 100 foot defensible space clearance. It is likely that the fire hazard severity zones will be used for updates to the safety element of general plans.

An interactive system for viewing map data is hosted by the UC Center for Fire at http://ffap.cdf.ca.gov/projects/hazard/methods.htm. Details on the project and specific modeling methodology can be found at http://ffap.cdf.ca.gov.

Government Code 51175-89 directs the Delaware-Urban Interface codes in late 2005 to be effective January 1, 2007. The version dated September 17, 2007 of the map shown here represents draft VHFHSZs within LRA, for review and comment by local government. The updated fire hazard severity zones will be used by building officials to determine appropriate construction materials for new buildings in the Wildland-Urban Interface. The updated zones will also be used by property owners to comply with natural hazards disclosure requirements at time of property sale and 100 foot defensible space clearance.
