Public Resources Code 4201-4204 directs the California Department of Forestry and Fire Protection (CAL FIRE) to map fire hazard within State Responsibility Areas (SRA) based on fuel loading, slope, fire weather, and other relevant factors present, including areas where wildland fire has been identified by the department as a major cause of wildfire spread. These areas, referred to as Fire Hazard Severity Zones (FHSZ), classify a wildland fire hazard across the area included in the zone.

Very High fire hazard zones are areas which have the potential to experience fast-moving, high-intensity fires that are difficult to suppress. These zones are identified and mapped by CAL FIRE to protect properties and reduce potential losses to life and property.

High fire hazard zones are areas which have the potential to experience rapid, high-intensity fires. These zones are identified and mapped by CAL FIRE to protect properties and reduce potential losses to life and property.

Moderate fire hazard zones are areas which have the potential to experience moderate fire behavior that can create conditions potentially hazardous to life and property. These zones are identified and mapped by CAL FIRE to protect properties and reduce potential losses to life and property.

San Joaquin County

Very High
32,326 Acres
High
33,350 Acres
Moderate
79,477 Acres
