The State of California and the Department of Forestry and Fire Protection make no representations or warranties regarding the accuracy of data or maps. Neither the State nor the Department shall be liable under any circumstances for any direct, special, incidental, or consequential damages with respect to any claim by any user or third party on account of, or arising from, the use of data or maps.

Public Resources Code §§4201–4204 direct the California Department of Natural Resources and the Department of Forestry and Fire Protection to establish fire hazard zones (FHSZs) in the State Responsibility Area (SRA) to identify areas where ignitable wildland fuels are present, including areas where wildland fires have been identified as a major cause of wildfire spread. These fire hazard zones are designated as Very High, High, Moderate, or Little fire hazard based on the average fire hazard across the area included in the zone.

FHSZs in the SRA are identified by the department as a major cause of wildfire spread. These zones, referred to as Fire Hazard Severity Zones (FHSZ), classify a wildland fuel area into one of four severity levels based on the level of fire hazard:

- **Very High**: 291,792 Acres
- **High**: 382,383 Acres
- **Moderate**: 129,323 Acres
- **Little**: 40 Acres
